**QUESTION 1**

You have an existing deployment of Microsoft Visual Studio Team Foundation Server (TFS). The application tier and data tier are on separate dedicated servers.

You need to provide redundancy to the application tier and increase performance.

Which two actions should you perform? Each correct answer presents part of the solution.

- A. Set up a SQL Server failover cluster.
- B. Set up Network Load Balancing.
- C. Install an additional application-tier server.
- D. Ensure that the application tier and configuration database are on the same server.

Correct Answer: BC

---

**QUESTION 2**

Your network environment includes a Microsoft Visual Studio Team Foundation Server (TFS) 2012 server that has separate computers for the application tier and the data tier.

The data-tier computer experiences hardware failure. You restore all the data of TFS on another computer in the network by using a backup.

You need to provide the location of the restored database to the application tier of TFS without reinstalling the application tier.

What should you do?

- A. Use the Team Foundation Backups node of the TFS Administration Console.
- B. Use the Application Tier node of the TFS Administration Console.
- C. Run the Tfsmqmt.exe configure command.
- D. Run the TfsConfig registerDB command.

Correct Answer: D

---

**QUESTION 3**

Your network environment includes a Microsoft Visual Studio Team Foundation Server (TFS) 2012 server. Your development team uses Visual Studio 2012.

You store specialized design files within your Visual Studio solution by using version control. These design files are stored in a proprietary binary format and use the filename extension .dzn.

You need to meet the following requirements:

Ensure that all developers can modify these design files.

Prevent multiple check-outs on all .dzn files.

Ensure that all other file types can be edited by multiple developers at the same time.

What should you do?

- A. Within the Source Control Explorer, right-click each .dzn file and uncheck the Allow multiple check outs option.
- B. Add a new file type for .dzn to the Team Project Source Control Settings and clear the Enable file merging and multiple check out checkbox.
- C. Within the Visual Studio Options dialog box for Source Control, add the .dzn extension to the Prevent multiple check-outs for the following file types list in the Visual Studio Team Foundation server node.
- D. Add a new file type for .dzn to the Team Project Collection Source Control Settings and clear the Enable file merging and multiple check out checkbox.

Correct Answer: D

---

#### QUESTION 4

Your network environment includes a Microsoft Visual Studio Team Foundation Server (TFS) 2012 server with one project collection and multiple build machines.

A development team installs and configures a build service on a new build machine.

You need to be able to validate that the installation and configuration meets your organization's requirements and follows its best practices.

At which service would you perform the following tasks? (To answer, drag the appropriate build component to the correct standards- checking task in the answer area. Each build component may be used once, more than once, or not at all.)

Select and Place:

Build Component	Standards Checking Task
Build Service	Validate that path was configured so customized build templates find their assembly references. <input type="text"/>
Build Agent	Validate that proper tags were used to route build requests to appropriate machines. <input type="text"/>
Build Controller	Validate that your standard working directory paths are being used. <input type="text"/>
	Validate that builds will support coded UI tests. <input type="text"/>

Correct Answer:

Build Component	Standards Checking Task
Build Service	Validate that path was configured so customized build templates find their assembly references.
Build Agent	Validate that proper tags were used to route build requests to appropriate machines.
Build Controller	Validate that your standard working directory paths are being used.
	Validate that builds will support coded UI tests.

#### QUESTION 5

Your network environment includes a Microsoft Visual Studio Team Foundation Server (TFS) 2012 server. Developers use Visual Studio 2012.

You recently copied your existing TFS environment onto a new set of servers on the same network.

You need to ensure that developers can continue connecting to the original TFS server.

What should you do?

- A. Rename the new Team Project Collection to a unique name.
- B. Run the ChangeServerID command on the new TFS environment.
- C. Configure the Team Project Collections with the same name on the same network.
- D. Run the ChangeServerID command on the original TFS environment.

Correct Answer: B
