QUESTION 1

Your network environment includes a Microsoft Visual Studio Team Foundation Server 2012 (TFS) server.

Version control is configured with one project collection and two team projects. Some users use 2010 and 2012 clients, such as Visual Studio and Team Explorer Everywhere.

You need to ensure that users will be prompted by, and can satisfy, the comments check-in policy when using both 2010 and 2012 clients.

Which two actions should you perform? (Each correct answer presents part of the solution. Choose two.)

- A. Add the Changeset Comments policy in the team project collection's source control settings.
- B. Add the Changeset Comments policy in the source control settings for each team project.
- C. Install the TFS 2010 Power Tools on all clients.
- D. Install the TFS 2012 Power Tools on all clients and configure the policy by using Team Explorer.
- E. Install the TFS 2010 and 2012 Power Tools on the TFS application tier and configure the policy by using Team Foundation Administrator.

Correct Answer: BC

QUESTION 2

Your network environment includes a Microsoft Visual Studio Team Foundation Server (TFS) server.

A developer has left the company and still has files checked out. The developer's computer is no longer available to undo the checkouts.

You need to undo any checked-out files for the user. You also need to delete the user's workspace.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Select and Place:

Actions	Answer Area
Use the tf undo command to remove the user's pending changes.	
Use the tf workspaces command to delete the user's workspaces.	
Use the tf workspace command to delete the user's workspaces.	
Use the tf workspaces command to get a list of the user's workspaces.	
Use the tf delete command to delete the user's workspace.	
Use the tf view command to get a list of the user's workspaces.	
Use the tf status command to change the status of any of the user's pending changes to remove them.	

Correct Answer:

Actions	Answer Area
	Use the tf status command to change the status of any of the user's pending changes to remove them.
Use the tf workspaces command to delete the user's workspaces.	Use the tf undo command to remove the user's pending changes.
	Use the tf workspace command to delete the user's workspaces.
Use the tf workspaces command to get a list of the user's workspaces.	
Use the tf delete command to delete the user's workspace.	
Use the tf view command to get a list of the user's workspaces.	

**QUESTION 3**

Your network environment includes a dual-tier Microsoft Visual Studio Team Foundation Server (TFS) 2012 installation. The first server hosts Microsoft SQL Server and Analysis Services, and the second server hosts TFS Application Tier and

Reporting Services.

The TFS installation uses the company's Enterprise SharePoint Server, which is backed up by a different team.

You need to perform regular backups of the TFS server, and you need to keep the size of the backup to the minimum.

Which three components should you back up? (Each correct answer presents part of the solution. Choose three.)

- A. TFS Configuration and Collection databases
- B. Configuration database
- C. SharePoint Products databases
- D. Analysis databases
- E. Warehouse database

Correct Answer: ACD

QUESTION 4

Your network environment includes two Microsoft Visual Studio Team Foundation Server (TFS) 2012 servers.

A remote site has two teams. Each team uses a different TFS instance. The developers at the remote site experience poor performance due to network bandwidth issues.

You need to relieve bandwidth by configuring Team Foundation server with the minimal components.

What should you do?

- A. Install an IIS Server at the remote site and add Output Caching Rules to the IIS instance. Change user configurations at the remote site to use IIS server.
- B. Install a single TFS Proxy instance at the remote site, adding; tags in TFProxy Proxy.config for each server instance. Point all users at the remote site to the TFS Proxy server.
- C. Install a third TFS Server and move the projects that are used by the remote team from existing servers to the third server. Point all users at the remote site to the new server.
- D. Install a TFS Proxy server instance for each project team. Point users from each project team at the respective TFS Proxy server.

Correct Answer: B

QUESTION 5

Your company uses a dual-tier deployment of Microsoft Visual Studio Team Foundation Server (TFS) that is integrated with the SQL Server Reporting Services. You are responsible for monitoring server health and performance. You notice a

spike in CPU activity on the application tier.

You need to determine the cause of the CPU activity.

In which two locations should you look? Each correct answer presents part of the solution.

- A. the TFS administration console
- B. the TFS Command Log table
- C. the SQL Server Profiler
- D. the activity and job history log

Correct Answer: AB
