QUESTION 1

You develop a Windows Communication Foundation (WCF) service that is hosted within a console application. The service implements the IRegistrationService interface in a class named RegistrationService. The service uses the following

endpoint URL:

`http://localhost:8080/registrationservice/basic`

You need to configure the console application to host the service.

How should you complete the relevant markup? (To answer, drag the appropriate markup segment to the correct location in the answer area. Each segment may be used once, more than once, or not at all. You may need to drag the split bar

between panes or scroll to view content.)

Select and Place:

```
<endpoint
  address="
  binding="
  contract="RegistrationServiceLibrary.
  listenUriMode="Explicit">
  <identity>
    <dns value="localhost" />
    <certificateReference
      storeName="My"
      storeLocation="LocalMachine"
      x509FindType="FindBySubjectDistinguishedName" />
  </identity>
</endpoint>
<host>
  <baseAddresses>
    <add baseAddress="http://localhost:8080/registrationservice" />
  </baseAddresses>
</host>
```

Correct Answer:

basic

basicAddress

basicHttpBinding

IRegistrationService

RegistrationService

Answer Area

```
</endpoint>
address=" basic "
binding=" basicHttpBinding "
contract="RegistrationServiceLibrary. IRegistrationService "
listenUriMode="Explicit">
  <identity>
    <dns value="localhost" />
    <certificateReference
      storeName="My"
      storeLocation="LocalMachine"
      x509FindType="FindBySubjectDistinguishedName" />
  </identity>
</endpoint>
<host>
  <baseAddresses>
    <add baseAddress="http://localhost:8080/registrationservice" />
  </baseAddresses>
</host>
```

QUESTION 2

You have an existing Windows Communication Foundation (WCF) Web service.

The Web service is not responding to messages larger than 64 KB.

You need to ensure that the Web service can accept messages larger than 64 KB without generating errors.

What should you do?

- A. Increase the value of `maxReceivedMessageSize` on the endpoint binding.
- B. Increase the value of `maxRequestLength` on the `httpRuntime` element.
- C. Increase the value of `maxBufferSize` on the endpoint binding.
- D. Increase the value of `maxBufferPoolSize` on the endpoint binding.

Correct Answer: A

QUESTION 3

A Windows Communication Foundation (WCF) application exposes a service as a SOAP endpoint for consumption by cross-platform clients. During integration testing, you find that one of the clients is not generating the correct messages to the WCF application. In order to debug the issue and fix the communication, you need to configure the service to log messages received from the client.

What should you do?

- A. Set an `etwTracking` behavior on the service and configure a listener for the `System.ServiceModel` trace source.
- B. Set an `etwTracking` behavior on the service and configure a listener for the `System.ServiceModel.MessageLuqqing` trace source.
- C. Enable `messageLogging` in the `System.ServiceModel` diagnostics element configuration and configure a listener for the `System.ServiceModel.MessageLogging` trace source.
- D. Enable `messageLogging` in the `System.ServiceModel` diagnostics element configuration and configure a listener for the `System.ServiceModel` trace source.

Correct Answer: C

QUESTION 4

You develop a Windows Communication Foundation (WCF) service that interacts with Microsoft Message Queuing (MSMQ).

The service requires sessions. You need to create a custom binding that enables messages sent to the queue to be viewed when you are using a listener tool.

Which binding elements should you use?

- A. `textMessageEncoding` and `msmqTransport` in this order
- B. `textMessageEncoding` and `msmqIntegrationTransport` in this order
- C. `msmqTransport` and `textMessageEncoding` in this order
- D. `msmqIntegrationTransport` and `textMessageEncoding` in this order

Correct Answer: A

QUESTION 5

A Windows Communication Foundation (WCF) service sends notifications when the service is started and stopped.

You need to implement a client that logs these notifications.

Which class should you use?

- A. `AnnouncementService`
- B. `AnnouncementClient`
- C. `DiscoveryClient`

D. HttpListener

Correct Answer: A
