- ⚙ **365 Days** Free Update
- ⚙ **800,000+** Satisfied Customers

**QUESTION 1**

You are designing a .NET Framework 4 solution that contains a Windows Presentation Foundation (WPF) application. The WPF application includes CPU-intensive calculations. The calculations can be run on a separate process and can effectively be isolated from the rest of the WPF application.

You need to recommend a deployment strategy that maximizes the scalability of the calculations for each user.

What should you recommend?

- A. Deploy the calculation logic as a Windows Communication Foundation (WCF) service to servers. Deploy the WPF application to the same servers.
- B. Deploy the calculation logic as a Windows Communication Foundation (WCF) service to servers. Deploy the WPF application to each client computer.
- C. Deploy the calculation logic as a separate assembly along with the WPF application to each client computer. Invoke methods in the assembly asynchronously.
- D. Deploy the calculation logic as a separate assembly along with the WPF application to each client computer. Invoke methods in the assembly synchronously.

Correct Answer: B

---

**QUESTION 2**

You are designing a complex and critical Windows desktop application by using Microsoft .NET Framework 4 and Microsoft Visual Studio 2010.

You plan to implement a logging strategy for the application.

You need to record all unexpected errors that occur in the application.

What should you do?

- A. Subscribe to the unhandled exception event handler for the AppDomain object. Record relevant application-specific information to an external log.
- B. Subscribe to the unhandled exception event handler for the application's dispatcher on the main application thread. Record relevant application-specific information to an external log.
- C. Create a generic catch (Exception e) block in the Main method of the application. Record relevant application-specific information to a log in the Main method.
- D. Create a global WIN 32 unhandled exception filter. Record relevant application-specific information to an external log from within the filter.

Correct Answer: D

---

**QUESTION 3**

You are designing an application by using Windows Presentation Foundation (WPF) and Microsoft .NET Framework 4.

The application is designed to allow novice users to enter data into a form.

If a user enters invalid data into an input control, the control blinks between two colors.

You need to ensure that the blinking visual feature can be applied to other controls without writing any additional code.

What should you do?

- A. Create a timer.
- B. Create a shared style.
- C. Create a WPF behavior
- D. Use a merged resource dictionary.

Correct Answer: C

---

**QUESTION 4**

You are designing an update to an existing Windows Presentation Foundation (WPF) application. Users can purchase and download photographs from the company's Web server by using the WPF application. Photographs must be viewable only when logged in as the user who purchased the photographs.

You need to recommend a download location for the photographs.

Which location should you recommend?

- A. the application's IsolatedStorage folder
- B. the user's IsolatedStorage folder
- C. the application's installation folder
- D. the user's local Temp folder

Correct Answer: B

---

**QUESTION 5**

You are designing a Windows Presentation Foundation (WPF) data entry application. The application uses data binding to bind controls in the user interface (UI) to business objects. The UI uses validation rules for each input control.

The data validation rules change based on the state of the business object.

You need to recommend a validation strategy that will allow changes to the validation rules without changes to the UI code.

What should you recommend?

- A. Set the ValidationStep attribute on ValidationRule elements to RawProposedValue.
- B. Set the ValidationStep attribute on ValidationRule elements to CommittedValue.
- C. Implement the IDataErrorInfo interface in the business objects and replace all ValidationRule elements with Exception ValidationRule elements.
- D. Implement the IDataErrorInfo interface in the business objects and replace all ValidationRule elements with DataErrorValidation Rule elements.

Correct Answer: D
