QUESTION 1

You are designing a Windows application by using Microsoft .NET Framework 4. Remote users have limited network connectivity. Users will not have write permissions to the local file system.

You plan to design the error logging strategy for the application.

You need to ensure that the application can collect error information. You also need to ensure that the errors can be analyzed from a centralized location.

What should you do?

A. Use a local log file.

B. Use the Microsoft Sync Framework.

C. Log the errors to a Web service.

D. Log the errors to the Windows System event log.

Correct Answer: B

QUESTION 2

You are debugging a Windows application that uses Windows Presentation Foundation (WPF) and Microsoft Visual Studio 2010.

The application is deployed as an XAML browser application (XBAP). Some users report that they are not able to use the drag-and-drop functionality.

You need to ensure that all users can use the drag-and-drop functionality.

What should you do?

A. Use loose XAML.

B. Require the FullTrust permission on the XBAP application.

C. Add the URL for the application to the browser\\'s trusted sites list.

D. Register the assembly that contains the IDataObject objects to the GAC on all client computers.

Correct Answer: C

QUESTION 3

You are designing a Windows Presentation Foundation (WPF) application by using Microsoft .NET Framework 4 and Microsoft Visual Studio 2010.

You plan to create an Author object that contains a Books property. The Books property contains a large array of Book objects.

When users browse through author data in the application, they must be able to view all information related to books written by that author without additional queries.

You need to design a data access strategy that meets the requirement.

Which strategy should you use?

A. lazy loading

B. eager loading

C. optimistic locking

D. pessimistic locking

Correct Answer: B

QUESTION 4

You are designing an n-tier .NET Framework 4 solution that includes a Windows Presentation Foundation (WPF) application and a Windows Workflow Foundation (WF) component. The WF component contains functionality to incorporate

frequently changing rules.

You need to recommend a tier for the deployment of the WF component that will not degrade the performance of the WPF application.

Which tier should you recommend?

A. The data tier

B. The data access tier

C. The presentation tier

D. The business tier

Correct Answer: D

QUESTION 5

You are designing a Windows Presentation Foundation (WPF) application by using Microsoft .NET Framework 4 and Microsoft SQL Server 2008.

The application runs successfully on a local client computer by using your user account. You deploy the database of the application to the production server. You configure the application connection string to use the Windows Authentication

mode.

You deploy the application to several client computers that use other applications on the network. The client computers access different databases on the production server by using the Windows Authentication mode.

Users report that the application is not working and that they receive a database connection exception.

You need to identify the source of the problem.

What is the source of the problem?

A. The database is currently blocked due to locks.

B. The users do not have the correct database permissions.

C. The users do not have valid SQL Server 2008 database logins.

D. The client computers are not configured to use the network.

Correct Answer: B
