**QUESTION 1**

You are designing an application by using Windows Presentation Foundation (WPF) and Microsoft .NET Framework 4. You plan to create a wizard by using a Window, a Frame, and several Page objects. The wizard will use the NavigationService. The NavigationService will be invoked by buttons on the user interface (UI). You need to ensure that prior-page navigation can be disabled.

What should you do?

- A. In the button Onclick event, remove the previous wizard page from the journal.
- B. In the button Onclick event, remove the previous wizard page from the Window.
- C. In the button OnMouseDown event, remove the previous wizard page from the Frame.
- D. In the button OnMouseDown event, remove the previous wizard page from the Window.

Correct Answer: A

QUESTION 2

You are developing an application by using Microsoft .NET Framework 4 and Microsoft Visual Studio 2010.

You plan to use Microsoft Sync Framework to synchronize the data stored in a local Microsoft SQL Server Compact Edition database with the data stored in a centralized SQL Server 2008 database.

Four columns are added to each table involved in the synchronization process to track changes to the database.

You add the following four columns to the database table.

Column Name	Data Type
CreatedUser	Int
UpdatedUser	Int
CreatedTime	Datetime
UpdatedTime	Datetime

Users report that the synchronization process is not always successful. You need to ensure that the application synchronizes data successfully. What should you do?

- A. Option A
- B. Option B
- C. Option C
- D. Option D

Correct Answer: A

QUESTION 3

You are designing a Windows Presentation Foundation (WPF) application.

The WPF application must run against either Microsoft SQL Server 2008 or a third-party database system without duplicating data access logic.

You need to recommend a data access technology.

What should you recommend?

- A. ADO.NET using DataSet objects and SqlDataReader objects
- B. ADO.NET using DataSet objects and SqlDataAdapter objects
- C. LINQ to Entities
- D. LINQ to SQL

Correct Answer: C

QUESTION 4

You are designing a Windows Presentation Foundation (WPF) client application from which employees will access a Web service.

Business partners will access the Web service by using proprietary client applications.

You need to recommend a solution for ensuring the integrity of data in the system.

What should you recommend?

- A. Secure the Web service by using SSL.
- B. Implement data validation at the service layer and reject invalid data.
- C. Implement data validation on the client and reject invalid data.
- D. Encrypt data while storing it in the database.

Correct Answer: B

QUESTION 5

You are designing a Windows Presentation Foundation (WPF) application that accesses a business tier. The business tier is implemented as a Windows Communication Foundation (WCF) service and stores data in a Microsoft SQL Server

2008 database.

The WCF service will be accessed by external applications that do not use the .NET Framework.

You need to recommend an approach for passing data between layers.

What should you recommend?

- A. Use custom .NET classes with XML serialization.
- B. Use custom .NET classes with binary serialization.
- C. Use a DataSet object.
- D. Use the DiffGram XML format.

Correct Answer: A
