**QUESTION 1**

You are designing a plan for testing a Windows Azure service. The service runs in the development fabric but fails on Windows Azure.

You need to recommend an approach for identifying errors that occur when the service runs on Windows Azure. What should you recommend?

- A. Attach a debugger to the Windows Azure role instance.
- B. Analyze debugging information captured by Windows Azure Diagnostics.
- C. Modify the service configuration for the Windows Azure role to access development storage.
- D. Analyze debugging information written to the output window of the Windows Azure role instance.

Correct Answer: B

You can use Azure Diagnostics to log detailed information from code running within roles, whether the roles are running in the development environment or in Azure. References: <https://docs.microsoft.com/en-us/azure/vs-azure-tools-debugging-cloud-services-overview>

---

**QUESTION 2**

You are creating scripts to authenticate Azure monitoring tasks.

You need to authenticate according to the requirements. How should you complete the relevant Azure PowerShell script?

Develop the solution by selecting and arranging the required Azure PowerShell commands in the correct order. NOTE: You will not need all of the Azure PowerShell commands.

Select and Place:

### Actions

```
Add-AzureAccount-Credential  
$credential
```

```
Select-AzureSubscription  
-SubscriptionName $subscription
```

```
Get-AzureAccount -Name $name
```

```
$credential = Get-AutomationPSCre-  
dential -Name $name
```

```
$credential = New-Object -TypeName  
System.Management.Automa-  
tion.PSCredential -ArgumentList  
$username, $password
```

```
Get-AzureSubscription -Subscription-  
Name $subscription
```

### Answer Area

www.Pass4itSure.com

Correct Answer:

## Actions

```
Get-AzureAccount -Name $name
```

```
$credential = Get-AutomationPSCredential -Name $name
```

```
Get-AzureSubscription -SubscriptionName $subscription
```

## Answer Area

```
$credential = New-Object -TypeName System.Management.Automation.PSCredential -ArgumentList $username, $password
```

```
Add-AzureAccount -Credential $credential
```

```
Select-AzureSubscription -SubscriptionName $subscription
```

From Scenario: Permissions must be assigned by using Role Based Access Control (RBAC).

The following cmdlet is used to sign-in to Azure: Add-AzureAccount If necessary, the following Azure cmdlets can be used to select the desired subscription:

```
Get-AzureSubscription
```

```
Select-AzureSubscription -SubscriptionName "SomeSubscription"
```

```
Set-AzureSubscription -SubscriptionName "SomeSubscription" `
```

### QUESTION 3

You plan to deploy four Infrastructure as a Service (IaaS) virtual machines in Azure. All IaaS virtual machines will reside on the same IP subnet. You need to design an Azure virtual network that can accommodate the deployment. The design must meet the following requirements:

Minimize the size of the IP subnet.

Provide the ability to restrict both internal and Internet traffic.

Ensure that the IP addresses of the virtual machines remain the same.

What should you include in the design? To answer, select the appropriate options in the answer area.

Hot Area:

### Answer Area

Virtual network subnet mask:

		▼
/28		
/29		
/30		

Cmdlet to configure IP addresses:

		▼
New-AzureReservedIP		
Set-AzureStaticVNetIP		

Method to restrict traffic:

		▼
Access control lists (ACL)		
Network security groups		
Traffic Manager		
ExpressRoute		

Correct Answer:

### Answer Area

Virtual network subnet mask:

		▼
/28		
/29		
/30		

Cmdlet to configure IP addresses:

		▼
New-AzureReservedIP		
Set-AzureStaticVNetIP		

Method to restrict traffic:

		▼
Access control lists (ACL)		
Network security groups		
Traffic Manager		
ExpressRoute		

Not /29.

/29 would normally provide up to 8 IP addresses which should be enough for four VMs.

However, Azure reserves five IP addresses so for four VMs, you need a subnet with at least 9 IP addresses.

---

#### QUESTION 4

You are responsible for mobile app development for a company. The company develops apps on Windows Phone, iOS, and Android. You plan to integrate push notifications into every app.

You need to be able to send users alerts from a backend server.

Which two options can you use to achieve this goal? Each correct answer presents a complete solution.

- A. Azure Notification Hubs
- B. Azure SQL Database
- C. Azure Mobile App Service
- D. Azure Web App
- E. a virtual machine

Correct Answer: AC

---

#### QUESTION 5

You are designing an Azure Web App that will use one worker role. The Web App does not use SQL Database.

You have the following requirements:

\*Maximize throughput and system resource availability

\*Minimize downtime during scaling

You need to recommend an approach for scaling the application.

Which approach should you recommend?

- A. Increase the role instance size.
- B. Set up horizontal partitioning.
- C. Increase the number of role instances.
- D. Set up vertical partitioning.

Correct Answer: C

On the Scale page of the Azure Management Portal, you can manually scale your application or you can set parameters to automatically scale it. You can scale applications that are running Web Roles, Worker Roles, or Virtual Machines. To

scale an application that is running instances of Web Roles or Worker Roles, you add or remove role instances to accommodate the work load.
