**QUESTION 1**

You have an Azure solution that uses Multi-Factor Authentication for added security when users are outside of the office. The billing model has been set to per- authentication.

Your company acquires another company and adds the new staff to Azure Active Directory (Azure AD). New staff members must use Multi-Factor Authentication.

You need to change the billing model to per-user.

What should you recommend?

- A. Use Azure CLI to change the current billing model.
- B. Use the Azure portal to change the current billing model.
- C. Create a new Multi-Factor Authentication resource and reconfigure the billing model.
- D. Create a new Multi-Factor Authentication resource with a backup from the current Multi-Factor Authentication resource data.

Correct Answer: C

The billing model is selected during resource creation and cannot be changed once the resource is provisioned. It's possible, however, to create a new Multi- Factor Authentication resource to replace the original. Please note that user settings and configuration options cannot be transferred to the new resource.

QUESTION 2

A company deploys Azure Active Directory (Azure AD) Connect to synchronize identity information from their on-premises Active Directory Domain Services (AD DS) directory to their Azure AD tenant. The identity information that is synchronized includes user accounts, credential hashes for authentication (password sync), and group memberships. The company plans to deploy several Windows and Linux virtual machines (VMs) to support their applications.

The VMs have the following requirements:

Support domain join, LDAP read, LDAP bind, NTLM and Kerberos authentication, and Group Policy.

Allow users to sign in to the domain using their corporate credentials and connect remotely to the VM by using Remote Desktop.

You need to support the VM deployment.

Which service should you use?

- A. Azure AD Domain Services
- B. Azure AD Managed Service Identity
- C. Azure AD Privileged Identity Management
- D. Active Directory Federation Services (AD FS)

Correct Answer: C

QUESTION 3

You need to implement the security requirements. What should you implement?

- A. the GraphAPI to query the directory
- B. LDAP to query the directory
- C. single sign-on
- D. user certificates

Correct Answer: C

<https://blogs.msdn.microsoft.com/plankytronixx/2010/11/27/single-sign-on-between-onpremise-apps-windows-azure-apps-and-office-365-services/>

QUESTION 4

You need to grant administrator access for the provisioning of Azure resources.

Solution: Enable and configure Managed Service Identity.

Does the solution meet the goal?

- A. Yes
- B. No

Correct Answer: B

QUESTION 5

A company has custom ASP.net and Java applications that run on old versions of Windows and Linux. The company plans to place applications in containers.

You need to design a solution that includes networking, service discovery, and load balancing for the applications. The solution must support storage orchestration.

Solution: Deploy a Kubernetes cluster that has the desired number of instances of the applications.

Does the solution meet the goal?

- A. Yes
- B. No

Correct Answer: A
