QUESTION 1

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while

others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You are designing the deployment of resources in Azure.

You plan to use templates to customize deployment options. You need to ensure that Azure services are deployed and updated identically.

Solution: You customize the \$schema element of the template.

Does the solution meet the goal?

A. Yes

B. No

Correct Answer: A

QUESTION 2

You are developing a web application that provides streaming video to users. You configure the application to use continuous integration and deployment.

The app must be highly available and provide a continuous streaming experience for user.

You need to recommend a solution that allows the application to store data in a geographical location that is closest to the user.

What should you recommend?

A. Azure Content Delivery Network (CDN)

B. Azure App Service Isolated

C. Azure App Service Web Apps

D. Azure Redis Cache

Correct Answer: A

QUESTION 3

For development purposes, you deploy several virtual machines in an Azure subscription.

Developers report that the virtual machines fail to access each other.

You export the virtual network configuration for the subscription as shown in the following aoutput.

```
<NetworkConfiguration xmlns:xsd="http://www.w3.org/2001/XMLSchema"
xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"
xmlns="http://schemas.microsoft.com/ServiceHosting/2011/07/NetworkConfiguration">
  <VirtualNetworkConfiguration>
    <Dns>
      <DnsServers>
        <DnsServer name="DNSServer" IPAddress="169.254.0.1" />
      </DnsServers>
    </Dns>
    <LocalNetworkSites>
      <LocalNetworkSite name="RemoteNet">
        <AddressSpace>
          <AddressPrefix>10.0.0.1/23</AddressPrefix>
        </AddressSpace>
      </LocalNetworkSite>
    </LocalNetworkSites>
    <VirtualNetworkSites>
      <VirtualNetworkSite name="ContosoNetwork" Location="East US">
        <AddressSpace>
          <AddressPrefix>10.0.2.0/23</AddressPrefix>
        </AddressSpace>
        <Subnets>
          <Subnet name="Subnet-1">
            <AddressPrefix>10.0.2.0/26</AddressPrefix>
          </Subnet>
          <Subnet name="GatewaySubnet">
            <AddressPrefix>10.0.2.64/29</AddressPrefix>
          </Subnet>
        </Subnets>
        <DnsServersRef>
          <DnsServerRef name="DNSServer" />
        </DnsServersRef>
        <Gateway>
          <VPNClientAddressPool>
            <AddressPrefix>10.0.0.0/24</AddressPrefix>
          </VPNClientAddressPool>
          <ConnectionsToLocalNetwork />
        </Gateway>
      </VirtualNetworkSite>
    </VirtualNetworkSites>
  </VirtualNetworkConfiguration>
</NetworkConfiguration>
```

You need to modify the network configuration to resolve the connection issue. What should you modify?

A. the site of the virtual network

- B. the IP address of the DNS server
- C. the IP address range of the gateway subnet
- D. the IP address range of subnet-1

Correct Answer: B

QUESTION 4

You need to recommend the appropriate strategy for the data mining application. What should you recommend?

- A. Configure multiple on-premises cluster that runs multiple Azure virtual machines to connect by using an Azure virtual private network (VPN).
- B. Configure an on-premises cluster that runs multiple Azure virtual machines that is located in the central office.
- C. Configure a cluster of high-performance computing virtual machines (VMs) that use the largest number of cores. Ensure that the VMs are instantiated in different Azure datacenters that are distributed across the same affinity group.
- D. Configure a cluster of high-performance computing virtual machines (VMs) that use the largest number of cores. Ensure that the VMs are instantiated in the same Azure datacenter.

Correct Answer: B

Scenario: Data Mining

Lucerne Publishing constantly mines its data to identify customer patterns. The company plans to replace the existing on-premises cluster with a cloud-based solution.

*

The data mining solution must support the use of hundreds to thousands of processing cores.

*

Minimize the number of virtual machines by using more powerful virtual machines. Each virtual machine must always have eight or more processor cores available.

*

Allow the number of processor cores dedicated to an analysis to grow and shrink automatically based on the demand of the analysis.

*

Virtual machines must use remote memory direct access to improve performance.

QUESTION 5

Note: This question is part of a series of questions that present the same scenario.

Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have

more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You need to prevent security attacks based on the Tabular Data Stream (TDS) Protocol. Solution: Enable token-based multi-factor authentication without a gateway appliance. Does the solution meet the goal?

A. Yes

B. No

Correct Answer: B
