QUESTION 1

DRAG DROP

You have an Azure Stack integrated system that uses a Microsoft Azure Active Directory (Azure AD) tenant named fabrikam.com as the identity provider.

You need to onboard contoso.com as a guest directory tenant.

Which action should each role perform? To answer, drag the appropriate actions to the correct roles. Each action may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

Select and Place:

Actions	Answer area
Run Register-AzsGuestDirectoryTenant against http://adminmanagement.fabrikam.com.	The Azure Stack cloud operator: _____ The global administrator of contoso.com: _____
Run Register-AzsGuestDirectoryTenant against http://management.fabrikam.com.	
Run Register-AzSWithMyDirectoryTenant against http://adminmanagement.fabrikam.com.	
Run Register-AzSWithMyDirectoryTenant against http://management.fabrikam.com.	

Correct Answer:

Actions	Answer area
Run Register-AzsGuestDirectoryTenant against http://management.fabrikam.com.	The Azure Stack cloud operator: Run Register-AzsGuestDirectoryTenant against http://adminmanagement.fabrikam.com. The global administrator of contoso.com: Run Register-AzSWithMyDirectoryTenant against http://management.fabrikam.com.
Run Register-AzSWithMyDirectoryTenant against http://adminmanagement.fabrikam.com.

QUESTION 2

You plan to create a Linux virtual machine on an Azure Stack integrated system.

You download an Ubuntu Server image.

Which authentication method can use to access the Linux virtual machine by using SSH?

- A. The Extensible Authentication Protocol (EAP)
- B. a Kerberos token
- C. a service principal
- D. a key pair

Correct Answer: D

QUESTION 3

NOTE: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution,

while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have several Azure Stack integrated systems.

A new Azure Stack operator joins your team.

You create a new user named AzStackOp1 that the new operator will use to manage the systems.

AzStackOp1 attempts to create a new plan and receives the following error message: "Failed to submit deployment. Error submitting the deployment request. Additional details from the underlying API that might be helpful: The client

`AzStackOp1@onmicrosoft.com\\' with object id `03f4f6a8-0bb5 does not have authorization to perform action..."

You need to ensure that AzStackOp1 can create plans and offers. The solution must prevent AzStackOp1 from delegating RBAC rights to other users.

Solution: You assign AzStackOp1 Contributor rights to the Default Provider Subscription.

Does this meet the goal?

- A. Yes
- B. No

Correct Answer: A

QUESTION 4

You deploy an Azure Stack integrated system.

You register the deployment by using a Cloud Solution Provider (CSP) subscription.

You need to review the resource consumption of all the Azure Stack tenants.

Which portal should you use?

A. the Azure Enterprise Agreement (EA) portal

B. Microsoft Partner Center

C. Azure Account Center

D. the Azure Stack administrator portal

Correct Answer: B

References: <https://docs.microsoft.com/en-us/azure/azure-stack/azure-stack-csp-ref-infrastructure>

QUESTION 5

Note: This question is part of a series of questions that use the same scenario. For your convenience, the scenario is repeated in each question. Each question presents a different goal and answer choices, but the text of the scenario is

exactly the same in each question in this series.

Start of repeated scenario.

Your company has a network that contains an Active Directory forest named fabrikam.com. The forest is synchronized to a Microsoft Azure Active Directory (Azure AD) tenant and has an Azure subscription.

The company also has an Azure AD tenant named contoso.com. Contoso.com has an Azure subscription. Contoso.com includes foreign principals.

The network contains the computers configured as shown in the following table.

Computer name	Operating system	Configuration
Server1	Windows Server 2016 Datacenter	Hyper-V host that hosts two test virtual machines
Server2	Windows Server 2016 Datacenter	Microsoft SQL Server 2016 server primary replica of an Always On availability group in a cluster named Cluster1
Server3	Windows Server 2016 Datacenter	Microsoft SQL Server 2016 server, secondary replica of an Always On availability group in Cluster1
Server4	Windows Server 2016 Datacenter	Member of Cluster1
Server5	Windows Server 2016 Datacenter	File server
Client1	Windows 10 Enterprise	Privileged access workstation

Fabrikam.com contains a user named User1.

For operating system deployment, the company uses a custom operating system image of Windows Server 2016 Datacenter named Image1.

You have an Azure Stack integrated system that is accessed by using the following endpoints:

<https://portal.fabrikam.com>

<https://adminportal.fabrikam.com> <https://management.fabrikam.com> Privileged endpoint: 192.168.100.100 Hardware lifecycle host: 192.168.101.101 <https://adminmanagement.fabrikam.com>

You onboard contoso.com as a guest directory tenant on the Azure Stack integrated system.

You implement in the following Azure Stack providers:

SQL Server

App Service

End of repeated scenario.

You plan to configure user1@fabrikam.com as a delegated provider to offer services to tenants.

You need to identify which service must be included in the Azure Stack plan that you offer to User1.

Which service should you identify?

A. Microsoft.Compute

B. Microsoft.KeyVault

C. Microsoft.Storage

D. Microsoft.Subscriptions

Correct Answer: D
