QUESTION 1

You successfully implement an App Service resource provider on an Azure Stack integrated system. You need to provide tenants with the ability to provision WordPress websites from the marketplace. Which additional Azure Stack service should you deploy?

A. a MySQL resource provider

B. a Key Vault resource provider

C. blockchain

D. Cloud Foundry

Correct Answer: A

WordPress requires MySQL for its database store.

QUESTION 2

You have an Azure Stack integrated system that has a SQL Server resource provider.

You need to remove the resource provider.

Which three types of objects should you delete before you run the deployment script? Each correct answer presents a complete solution.

NOTE: Each correct selection is worth one point.

A. user databases

B. Default Subscription Provider

C. storage accounts

D. hosting servers

E. plans

Correct Answer: ADE

To remove the SQL resource provider, it is essential to first remove any dependencies:

1.

 Ensure that you have the original deployment package that you downloaded for this version of the SQL resource provider adapter.

2.

 All user databases must be deleted from the resource provider. (Deleting the user databases doesn\\'t delete the data.) This task should be performed by the users themselves.

3.

 The administrator must delete the hosting servers from the SQL resource provider adapter.

4.

 The administrator must delete any plans that reference the SQL resource provider adapter.

5.

 The administrator must delete any SKUs and quotas that are associated with the SQL resource provider adapter.

6.

 Rerun the deployment script with the following elements: The -Uninstall parameter The Azure Resource Manager endpoints The DirectoryTenantID The credentials for the service administrator account

QUESTION 3

DRAG DROP

You have an Azure Stack integrated system.

Several users use the Microsoft Azure CLI to manage Azure Stack resources.

You need to ensure that the users can use Azure CLI to deploy virtual machines by using templates from the Marketplace. The solution must ensure that the users can reference images by using aliases.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Select and Place:

Correct Answer:

Actions

Run the `az provider register` command.

Answer Area

Publish the images to the Marketplace.

Create an endpoint.

Instruct the users to run the `az cloud register` command.

---

QUESTION 4

You have two Azure Stack integrated systems names Stack1 and Stack2.

You create an Azure Resource Manager template that successfully deploys to Stack1.

You attempt to deploy the template to Stack2, but the deployment fails. What is a possible cause of the deployment failure?

A. Stack1 has Azure Marketplace syndication disabled and Stack2 has Azure Marketplace syndication enabled.

B. The template was created by using Microsoft Visual Studio Code.

C. The template references an image that was not published on Stack2.

D. Stack1 has Azure Marketplace syndication enabled and Stack2 has Azure Marketplace syndication disabled.

Correct Answer: C

QUESTION 5

Note: This question is part of a series of questions that use the same scenario. For your convenience, the scenario is repeated in each question. Each question presents a different goal and answer choices, but the text of the scenario is exactly the same in each question in this series.

Start of repeated scenario.

Your network contains an Active Directory forest named contoso.com

You deploy an Azure Stack integrated system named Prod to a production environment. You also deploy an Azure Stack integrated system named Dev to a development environment. The developers who access Dev change frequently.

The Azure Stack integrated systems and the contoso.com forest are federated.

The on-premises network contains a Hyper-V host that hosts a Red Hat Enterprise Linux virtual machine named Linux1. Linux1 has the following characteristics:

A 2-TB disk Generation 1 10 virtual cores 128 GB of RAM A disk named LinuxVhd.vhdx

You plan to deploy infrastructure as a service (IaaS) to Dev for developer projects. The Marketplace on Dev is configured and ready to publish items. Dev contains one plan named Dev_Plan1 and one offer named Dev_Offer1.

Prod contains two plans and two offers. One of the offers is named Offer1.

All the IaaS and platform as a service (PaaS) tenant data must be backed up to an external location. The solution must ensure that the data can be restored if the datacenter that hosts Prod becomes unavailable.

End of repeated scenario.

You need to recommend a backup strategy for Prod.

Which two technologies should you include in the recommendation? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

A. Microsoft Azure Backup

B. a blob snapshot

C. AzCopy

D. a virtual machine checkpoint

Correct Answer: AC
