**QUESTION 1**

You deploy an Azure Stack integrated system that uses an external domain name of west.fabrikam.com

Currently, tenant users access the system internally.

You need to create a SSL certificate for the publication of externally accessible endpoints. The solution must ensure that tenant users can upload VHD files to Azure Stack remotely.

Which two names should you include in the certificate? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

- A. adminmanagement.west.fabrikam.com
- B. *.west.fabrikam.com
- C. *.blob.west.fabrikam.com
- D. adminportal.west.fabrikam.com
- E. *.trafficmanager.west.fabrikam.com

Correct Answer: BC

QUESTION 2

You have an Azure integrated system.

You receive a storage alert that a tenant share is at 80 percent capacity. There are multiple containers in the tenant's share.

You verify that there are no deleted storage accounts.

You need to increase the amount of space availability on the tenant share.

Which cmdlet should you run?

- A. Start-AzsReclaimStorageCapacity
- B. Start-AzsStorageContainerMigration
- C. Set-AzsStorageQuota
- D. Remove-AzsStorageQuota

Correct Answer: C

QUESTION 3

You have an Azure Stack integrated system.

When you attempt to deploy an update, you retrieve an installation error message.

You resolve the issue that caused the error.

You need to continue the update installation from the last successful step.

What should you do?

- A. Connect to the privileged endpoint, and then run the Update-TenantAPI.ps1 script.
- B. Connect to the Azure Resource Manager (administrator) endpoint, and then run the Update-TenantAPI.ps1 script.
- C. Connect to the Azure Resource Manager (administrator) endpoint, and then run the Resume-AzureStackUpdate cmdlet.
- D. Connect to the privileged endpoint, and then run the Resume-AzureStackUpdate cmdlet.

Correct Answer: D

QUESTION 4

HOTSPOT

Note: This question is part of a series of questions that use the same scenario. For your convenience, the scenario is repeated in each question. Each question presents a different goal and answer choices, but the text of the

scenario is exactly the same in each question in this series.

Start of repeated scenario.

Your network contains an Active Directory forest named contoso.com

You deploy an Azure Stack integrated system named Prod to a production environment. You also deploy an Azure Stack integrated system named Dev to a development environment. The developers who access Dev change frequently.

The Azure Stack integrated systems and the contoso.com forest are federated.

The on-premises network contains a Hyper-V host that hosts a Red Hat Enterprise Linux virtual machine named Linux1. Linux1 has the following characteristics:

1.
A 2-TB disk
2.
Generation 1
- 3.

10 virtual cores

4.

128 GB of RAM

5.

A disk named LinuxVhd.vhdx

You plan to deploy infrastructure as a service (IaaS) to Dev for developer projects. The Marketplace on Dev is configured and ready to publish items. Dev contains one plan named Dev_Plan1 and one offer named Dev_Offer1.

Prod contains two plans and two offers. One of the offers is named Offer1.

All the IaaS and platform as a service (PaaS) tenant data must be backed up to an external location. The solution must ensure that the data can be restored if the datacenter that hosts Prod becomes unavailable.

End of repeated scenario.

You need to add a custom Windows Server 2016 image to the Marketplace on Dev.

Which command should you run? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Hot Area:

Answer Area

▼
Add-AzsGalleryItem
New-AzsServer2016VMImage
New-AzsVMImage

-publisher "Microsoft" offer "Windows"

▼
-CreateGalleryItem true
-informationAction inquire
-version 1.0.0

Correct Answer:

Answer Area

▼
Add-AzsGalleryItem
New-AzsServer2016VMImage
New-AzsVMImage

-publisher "Microsoft" offer "Windows"

▼
-CreateGalleryItem true
-informationAction inquire
-version 1.0.0

QUESTION 5

HOTSPOT

You have an Azure Stack integrated system.

You need to install the Azure Stack-compatible Azure PowerShell modules on a management workstation.

You set the \$profile variable to the correct API version.

Which commands should you run? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Hot Area:

Answer Area

Install-Module -Name

AzureRm.BootStrapper
AzureRmProfile
AzureStack

 -Force

Get-AzureRmProfile
Select-AzureRmProfile
Use-AzureRmProfile

 -Profile profile\$ -Force

Correct Answer:

Answer Area

```
Install-Module -Name 

|                      |
|----------------------|
| AzureRm.BootStrapper |
| AzureRmProfile       |
| AzureStack           |

 -Force
```

```

|                       |
|-----------------------|
| Get-AzureRmProfile    |
| Select-AzureRmProfile |
| Use-AzureRmProfile    |

 -Profile profile$ -Force
```
