**QUESTION 1**

You create a mobile Web Form. The mobile Web Form contains a mobile Calendar control named cal Date. You need to capture the date that users choose from the Calendar control. What should you do?

- A. Create an event handler for the OnSelectionChanged event of the calDate control. In the event handler, read the Calendars VisibleDate property.
- B. Create an event handler for the OnSelectionChanged event of the calDate control. In the event handler, read the Calendars SelectionDate property.
- C. Create an event handler for the OnInit event of the calDate control. In the event handler, read the Calendars VisibleDate property.
- D. Create an event handler for the OnInit event of the calDate control. In the event handler, read the Calendars SelectionDate property.

Correct Answer: B

---

**QUESTION 2**

You create Web-based client applications. You are creating a page for a Web-based application. You must ensure that the page meets the following requirements:

Uses forms authentication to validate users. Deploys on a single Web server. Is highly secure. Gives higher priority to security than speed. You need to recommend a configuration setting for your page. Which configuration setting should you

choose?

- A.
- B.
- C.
- D.

Correct Answer: D

---

**QUESTION 3**

You create Web-based client applications. You are creating a Web-based discussion forum. The discussion forum will permit users to post and reply to discussion threads after logging on. You create the authentication mechanisms of your Web site. Microsoft SQL Server 2005 and the Active Directory directory service will continue to be used interchangeably for authentication. You need to provide a method for the users of the discussion forum to register. You also need to maintain the capability to use multiple authentication methods when the users register. Which method should you use?

- A. Create a custom component that provides a new user registration form and stores the results in XML that matches a defined schema, which can then be imported into any desired authentication scheme.
- B. Create a form that contains standard text boxes for the required user information. Use the post back of the form to pass the information to a custom class that is associated with the selected authentication scheme of the particular Web forum.
- C. Create a custom component that consumes the ASP.NET 2.0 Membership Provider Model and create custom Membership Providers.
- D. Create a form that contains a Create User Wizard control and configure Membership Providers.

Correct Answer: D

---

#### QUESTION 4

You are developing a server application that will transmit sensitive information on a network. You create an X509Certificate object named certificate and a TcpClient object named client. You need to create an SslStream to communicate by using the Transport Layer Security 1.0 protocol. Which code segment should you use?

- A. `SslStream ssl = new SslStream(client.GetStream());ssl.AuthenticateAsServer( certificate, false,SslProtocols.None, true);`
- B. `SslStream ssl = new SslStream(client.GetStream());ssl.AuthenticateAsServer( certificate, false,SslProtocols.Ssl3, true);`
- C. `SslStream ssl = new SslStream(client.GetStream());ssl.AuthenticateAsServer( certificate, false,SslProtocols.Ssl2, true);`
- D. `SslStream ssl = new SslStream(client.GetStream()); ssl.AuthenticateAsServer( certificate, false,SslProtocols.Tls, true);`

Correct Answer: D

---

#### QUESTION 5

A test team plans to conduct performance testing on a Web site that is deployed on a staging server. The test team needs to modify the deployed Web Forms to test different scenarios. You need to deploy the Web site to the staging server without the Web site's source code files. What should you do?

- A. Compile the Web site in Microsoft Visual Studio 2005 by selecting Build Solution.
- B. Use the Copy Web tool.
- C. Use the Publish Web tool and select Allow this precompiled site to be updateable.
- D. Use aspnet\_compiler.exe with the default options.

Correct Answer: C
