QUESTION 1

You are designing a SharePoint 2010 Internet site for e-commerce. The site shows pricing information retrieved from a Microsoft SQL Server database for the deals featured each day on the home page.You need to cache the pricing data for each featured deal on the server and refresh the data with a minimum amount of network traffic.

Which approach should you recommend?

A. Use LINQ to SharePoint from a query of the database server for the pricing data.

B. Use AJAX code on the client from the database server.

C. Use the server session state to cache the data.

D. Cache the data and use a lock to control the refresh of the cache data.

Correct Answer: D

QUESTION 2

You are designing an application configuration approach for a custom SharePoint 2010 application. You need to design the application configuration to:

.Store and secure custom configuration settings for the application including connection strings, server names, file paths, and other miscellaneous settings.

.Read and display the settings on the site with an administrative user interface that can be configured using a custom _layouts page.

.Store configuration settings at the farm, Web application, site collection, and site levels as needed. You need to design a storage option that is simple and lightweight in structure and programmatically configurable.

Which approach should you recommend?

A. Add custom configuration settings to the web.config file and programmatically read this file to display the custom settings.

B. Use a hierarchical object store to save the custom configuration settings and programmatically read it to display the custom settings.

C. Use a property bag to store the custom configuration settings.

D. Use SharePoint lists to store the custom configuration settings.

Correct Answer: C

QUESTION 3

You are designing a public-facing SharePoint 2010 Web site for an elementary school that has many events each year. School administrators plan events for students and their parents.You need to create a design for meeting the following

requirements:

.Parents must be able to log on to the site and sign up for events electronically, regardless of the software they have installed on their computers or the browsers they are using.

.Each event registration needs to be saved in a list or library on the site.

.School personnel responsible for making changes need to be able to customize each new event registration form with images and text.

Which actions should your design specify? (Each correct answer presents a complete solution. Choose two.)

A. Create a new document library for each event. Then customize the Word document template for that new library. Ask parents to fill out a new Microsoft Word document for each event and upload it to the document library.

B. Create a new InfoPath 2010 form for each event. Then publish the form to a new form library with InfoPath Forms Services enabled. Create a custom Submit option so that when parents submit the form, the completed form is saved to the library. Ask parents fill out the form in their browser.

C. Create a new list for each event. Use InfoPath 2010 to create a new registration form and customize it for each new event. Ask parents to fill out the form to register for an event. When parents submit the form, their information is saved as a new list item in the list.

D. Create a new list for each event. Use Microsoft Silverlight to create a new registration form and host the Silverlight control in a Web Part on the site. Ask parents to fill out the form to register for an event. Configure a data connection on the Web Part that will submit the form information to the new event list.

Correct Answer: BC

QUESTION 4

You are designing an extranet site using SharePoint 2010.This site must allow employees to log on to the extranet site from home. They should use their corporate Active Directory credentials by typing their user name and password into text boxes on a logon page on the site. After users log on, they should be redirected to the site home page.You need to meet these requirements with the least amount of configuration.

Which type of authentication should you design?

A. forms-based authentication (FBA)

B. Web Single-Sign On (SSO)

C. NTLM

D. Kerberos

Correct Answer: A

QUESTION 5

You have a SharePoint 2010 intranet site with a site collection for all team projects.Each team project site is created from a custom team project site definition. These sites are created with a standard list to help manage team projects. Each

list can be modified as needed for each site. You are asked to design two features: .A feature named X for the list template .A feature named Y for creating an instance of the list

You need to ensure that the list template is installed before the list instance. Which approach should you recommend?

A. Set the scope of feature X to Web and the scope of feature Y to Site. Set feature X as an activation dependency for feature Y.

B. Set the scope of feature X to Site and the scope of feature Y to Web. Set feature Y as an activation dependency for feature X.

C. Set the scope of feature X to Site and the scope of feature Y to Web. Set feature X as an activation dependency for feature Y.

D. Set the scope of feature X to Web and the scope of feature Y to Site. Set feature Y as an activation dependency for feature X.

Correct Answer: C
