QUESTION 1

You are designing a SharePoint 2010 application.You need to specify that a custom button is defined and added to the SharePoint 2010 ribbon. Which two actions should be performed? (Each correct answer presents part of the solution. Choose two.)

A. Create a new Content Organizer content type that defines the button.

B. Create Feature Definition and Feature Element XML files that define the button.

C. Use the STSADM.EXE utility to deploy the button.

D. Use the Site Collection Features option in the Site Collection Administration group to deploy the button.

Correct Answer: BC

QUESTION 2

You are designing a custom administrative timer job for a SharePoint 2010 farm.You need to design a storage plan for the program configuration data that meets the following requirements:

.The configuration data in the storage location must control the program logic for the timer job.

.The storage location must allow the configuration information to be saved and modified as the timer job parameters change.

.The storage location must require administrative access to modify the program logic.

.The storage method must support farm-scoped timer jobs.

Which object class should you use to create the storage location?

A. the ConfigurationSection class in the web.config file

B. the SPWebConfigModification class in in the web.config file

C. the SPPersistedObject class in the hierarchical object store

D. the SPWeb class in the site collection property bag

Correct Answer: C

QUESTION 3

You are designing a SharePoint 2010 solution that includes a custom site definition and a custom master page.The solution has the following three features:

.A hidden site-scoped feature named X that adds the custom master page to the Master Page gallery.

.A Web-scoped feature named Y with a feature receiver that sets the master page of the Web to the master page from feature X.

.A Web-scoped feature named Z with a feature receiver that populates the default.aspx file with sample content.

Any Web site that is created based on the solution\\\'s custom site definition must have the master page and the sample content applied to it automatically.Your design must ensure that features X, Y, and Z can be activated in the proper order.

Which approach should you recommend?

A. Include features X, Y, and Z in that order in the onet.xml file for the site definition.

B. Include a user control in the custom master page to activate feature Z the first time the page is rendered, and include features X and Y in the onet.xml file for the site definition.

C. Set feature dependencies so that feature X is dependent upon feature Y and feature Y is dependent upon feature Z, and then use feature stapling to attach feature X to the site definition.

D. Set feature dependencies so that feature Y is dependent upon feature Z, and then use feature stapling to attach features X and Y to the site definition.

Correct Answer: B

QUESTION 4

You are planning a feature upgrade for a SharePoint 2010 farm. The original feature with a version number of 1.0.0.0 is activated in numerous scopes within the farm. You have designed a new version of the feature, 2.0.0.0, which has been deployed and activated in many locations but not all.You need to recommend a way to use the object model to determine if the version number of each feature instance is less than the 2.0.0.0 version in all of the locations.

Which approach should you recommend?

A. Use the object model to update the Version attribute of the feature in the existing Feature.xml file.

B. Call the QueryFeatures method for each location hosting the feature in the various scopes.

C. Programmatically add an section to the Feature.xml file that specifies the new version number for the feature.

D. Create a feature receiver that calls the Upgrade method of the SPFeatures class for the feature.

Correct Answer: B

QUESTION 5

You are designing a Windows application that accesses information stored on a SharePoint 2010 intranet site. The application displays employee information in a data grid sourced from a list on the Human Resources site.To filter and

manipulate the employee details list, the design includes a class to cache the data that is accessed. The class keeps the SPWeb object open, but only retrieves data that is not already cached. You need to ensure proper memory utilization and resource management for the application.

Which approach should you recommend?

A. Implement the class with the IDisposable interface and allow the .NET Framework garbage collector to automatically manage the SPWeb object disposal.

B. Implement the class with the IDisposable interface and explicitly dispose of the SharePoint SPWeb object when you are finished using it.

C. Implement the class as a fully managed .Net Framework object and allow the .NET Framework garbage collector to automatically manage the SPWeb object disposal.

D. Implement the class as a fully managed .Net Framework object and explicitly manage the SPWeb object using the ISPerformanceMonitor interface.

Correct Answer: B
