-  **365 Days** Free Update
-  **800,000+** Satisfied Customers

**QUESTION 1**

Your network contains two Active Directory forests named contoso.com and adatum.com.

Active Directory Rights Management Services (AD RMS) is deployed in contoso.com. An AD RMS trusted user domain (TUD) exists between contoso.com and adatum.com.

From the AD RMS logs, you discover that some clients that have IP addresses in the adatum.com forest are authenticating as users from contoso.com.

You need to prevent users from impersonating contoso.com users.

What should you do?

- A. Configure trusted e-mail domains
- B. Enable lockbox exclusion in AD RMS.
- C. Create a forest trust between adatum.com and contoso.com.
- D. Add a certificate from a third-party trusted certification authority (CA).

Correct Answer: A

---

**QUESTION 2**

Your network contains a computer named Computer1 that runs Windows 7.

You need to verify if Computer1 has active DirectAccess connections to the network.

What should you do?

- A. From Network Connections, right-click the active network connection, and then click Status.
- B. From Network Connections, select the active network connection, and then click Diagnose this connection.
- C. From Windows Firewall with Advanced Security, click Monitoring, and then click Connection Security Rules.
- D. From Windows Firewall with Advanced Security, click Monitoring, click Security Associations, and then click Main Mode.

Correct Answer: D

---

**QUESTION 3**

Your network contains a server that runs Windows Server 2008 R2.

You create a User Defined Data Collector Set (DCS) named Set1. You need to ensure that the reports generated for Set1 are stored for at least one year.

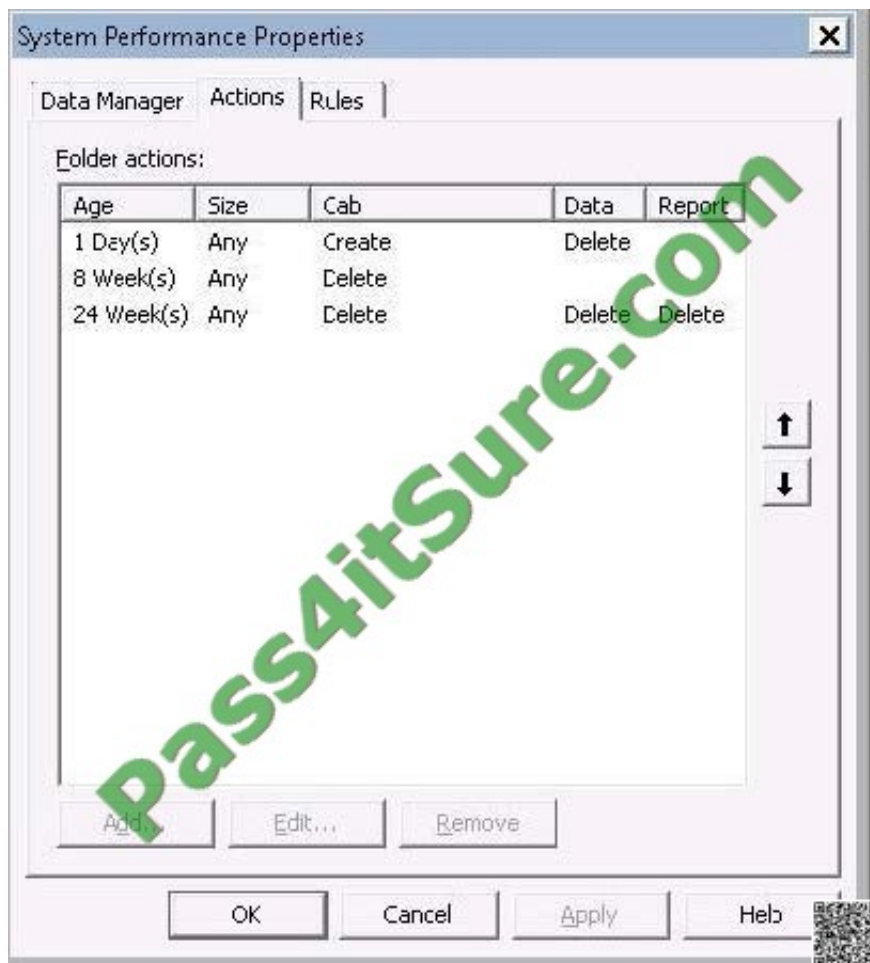

What should you do?

- A. From Data Manager for Set1, modify the Data Manager settings.
- B. From Data Manager for Set1, modify the Actions settings.
- C. From the properties of Set1, modify the Task settings.
- D. From the properties of Set1, modify the Schedule settings.

Correct Answer: B

The old answer was: From the properties of Set1, modify the Task settings. The time before a log shall be deleted settings are in the Data Manager\\'s "Actions Tab" of the custom/user defined DSC.

#### QUESTION 4

Your network contains a server named Server1. Server1 has two 100 GB hard disk drives named C and E that are configured as simplevolumes.

Drive E hosts a shared folder named Folder1.

You plan to allow a new group of users to store up to 400 GB of data in a new shared folder. You add two 500 GB disk drives to the server.

You need to ensure that new group of users can access the new shared folder and that the data stored in the folder is

fault tolerant.

What should you do first?

- A. From the Share and Storage Management console, run the Provision a Shared Folder Wizard.
- B. From the Share and Storage Management console, run the Provision Storage Wizard.
- C. From the Disk Management console, run the Add Mirror wizard.
- D. From the Disk Management console, run the Extend Volume Wizard.

Correct Answer: D

---

### QUESTION 5

Your network contains a server named Server1 that has the Hyper-V server role installed.

Server1 hosts a virtual machine (VM) named VM1 that runs Windows Server 2003 Service Pack 2 (SP2). VM1 is configured to use a 127-GB dynamically-expanding virtual hard disk (VHD).

You need to add 500 GB of disk space to VM1. The solution must minimize the amount of downtime for VM1.

What should you do?

- A. Increase the size of the VHD drive.
- B. Add a new VHD drive to an IDE controller.
- C. Convert the VHD to a fixed-size disk.
- D. Add a new VHD drive to a SCSI controller.

Correct Answer: D

Explanation: Dynamic virtual machine storage. Improvements to virtual machine storage include support for hot plug-in and hot removal of the storage on a SCSI controller of the virtual machine. By supporting the addition or removal of virtual hard disks and physical disks while a virtual machine is running, it is possible to quickly reconfigure virtual machines to meet changing requirements. Hot plug-in and removal of storage requires the installation of Hyper-V integration services (included in Windows Server 2008 R2) on the guest operating system.
