**QUESTION 1**

You have a computer that runs Windows 7. Windows XP Mode and Windows Virtual PC are installed on the computer.

When running Windows XP Mode with Windows Virtual PC, you install a 16-bit application named App1.exe.

You need to ensure that you can start Appl.exe by using a shortcut on the Windows 7 Start menu.

What should you do?

- A. From Windows 7, add a shortcut to the Start menu.
- B. From the virtual PC, add a shortcut to the Start menu.
- C. From Windows 7, run Start appl.exe /separate.
- D. From the virtual PC, run Start appl.exe /separate.

Correct Answer: B

QUESTION 2

You have a computer that runs Windows 7.

Your company has a corporate intranet Web site.

You open Windows Internet Explorer as shown in the exhibit. (Click the Exhibit button.)

You need to ensure that you can access Web pages on both the Internet and the intranet. From the Tools menu, what should you do?

- A. Click ActiveX Filtering.
- B. Click Work Offline.
- C. Click Compatibility View.

D. Point to SmartScreen Filter and then click Turn off SmartScreen Filter.

Correct Answer: B

QUESTION 3

You have a computer that runs Windows 7. You need to ensure that all users are required to enter a username and password when uninstalling applications from the computer. What should you do from Local Group Policy Editor?

- A. Configure a software restriction policy.
- B. Modify the Add or Remove Programs settings.
- C. Configure an AppLocker Windows Installer rule.
- D. Modify the User Account Control: Behavior of the elevation prompt for administrators in Admin Approval Mode setting.

Correct Answer: D

QUESTION 4

You administer a computer that has Windows 7 Enterprise installed. The computer reboots unexpectedly. You suspect that an unsigned driver causes the reboots.

You need to view a list of all installed device drivers that contain information about the digital signature of the device driver.

Which should you do?

- A. Run the driverquery.exe /SI command.
- B. Open the System Protection configuration for drive C.
- C. Open Device Manager, show hidden devices, and sort all devices by type.
- D. Run sigverif.exe and start the verification process of the device drivers. Then, review the generated log file.

Correct Answer: A

QUESTION 5

You have a computer named Computer1 that runs Windows 7. The computer is a member of an Active Directory domain. The network contains a file server named Server1 that runs Windows Server 2008.

You log on to the computer by using an account named User1. You need to ensure that when you connect to Server1, you authenticate by using an account named Admin1.

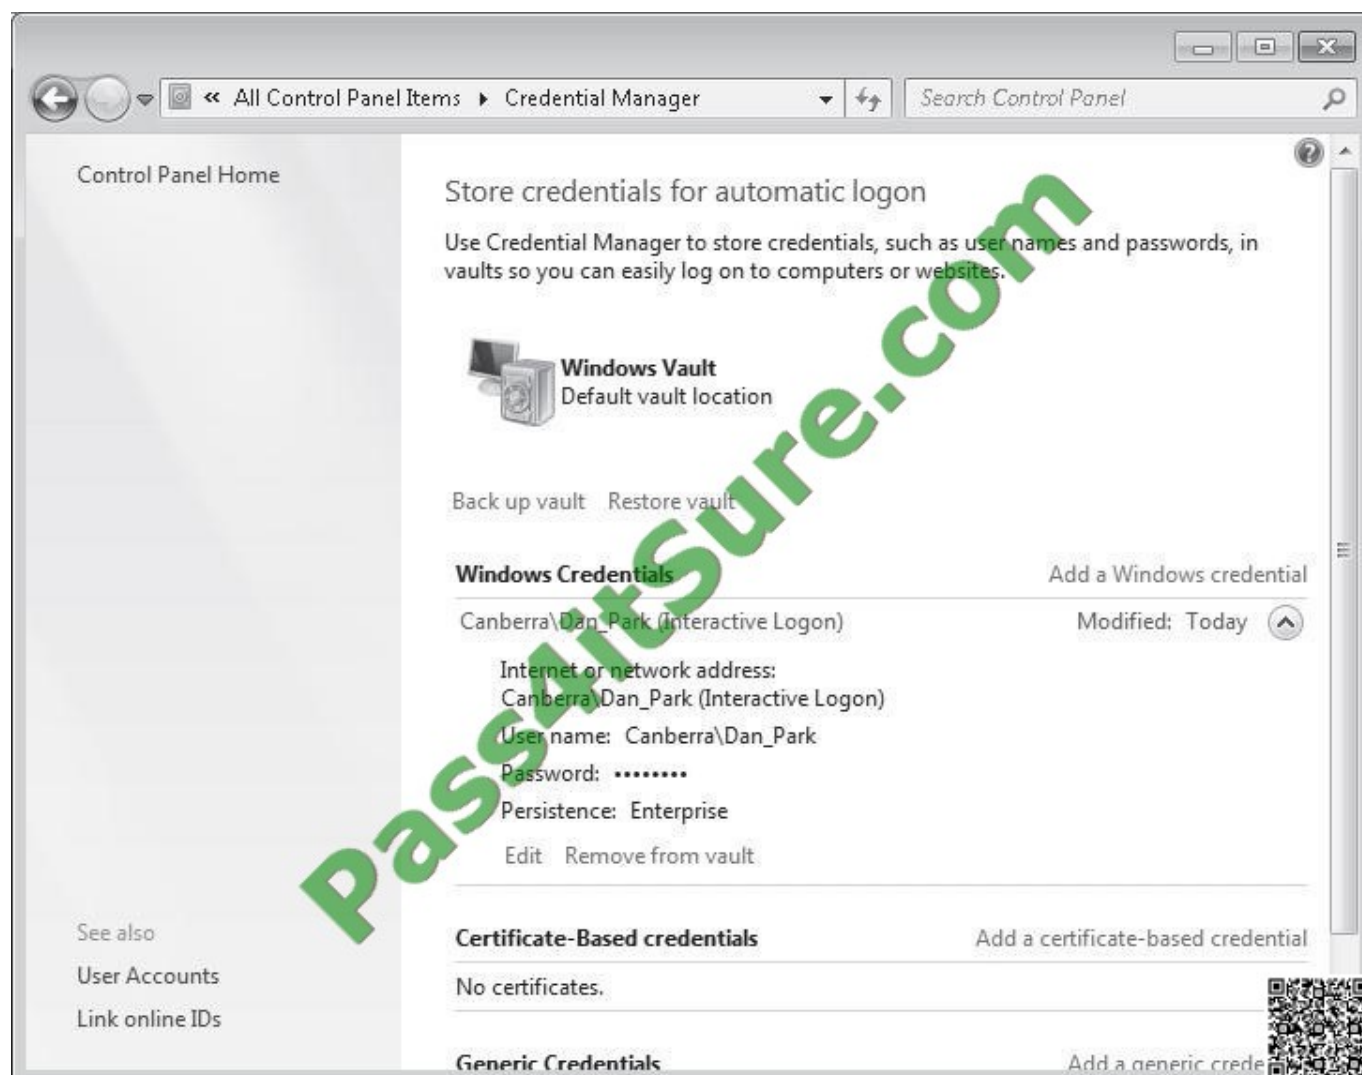

What should you do on Computer1?

- A. From User Accounts, select Link online IDs.
- B. From Windows CardSpace, select Add a card.
- C. From Credential Manager, select Add a Windows credential.
- D. From Local Security Policy, modify the Access this computer from the network user right.

Correct Answer: C

Credential Manager Credential Manager stores logon user name and passwords for network resources, including file servers, Web sites, and terminal services servers. Credential Manager stores user name and password data in the Windows Vault. You can back up the Windows Vault and restore it on other computers running Windows 7 as a method of transferring saved credentials from one computer to another. Although Credential Manager can be used to back up some forms of digital certificates, it cannot be used to back up and restore the self-signed Encrypting File System (EFS) certificates that Windows 7 generates automatically when you encrypt a file. For this reason, you must back up EFS certificates using other tools. You will learn about backing up EFS certificates later in this lesson.
