**QUESTION 1**

You use a computer that has Windows 7 Enterprise installed.

You install Windows Vista Enterprise to a different partition. You discover that the computer boots to Windows Vista by default.

You need to ensure that the computer boots to Windows 7 Enterprise by default.

What should you do?

- A. On the General tab in the msconfig tool, select the Selective startup option button, and then select the Use original boot configuration check box.
- B. On the Boot tab in the msconfig tool, highlight the Windows 7 boot entry and select the Make all boot settings permanent check box. Then, click Apply.
- C. From an elevated command prompt in Windows Vista, run the `bcdedit /default (default) comma`
- D. From an elevated command prompt in Windows 7 run the `bcdedit /default (current) command`

Correct Answer: B

QUESTION 2

You have an offline virtual hard disk (VHD) that contains a generalized installation of Windows 7 Ultimate.

You need to disable the built-in games in the VHD. You must achieve this goal by using the minimum amount of administrative effort.

What should you do?

- A. Start a computer from the VHD. Run `Ocsetup.exe` and specify the `/uninstall` parameter. Recapture the VHD.
- B. Start a computer from the VHD. From Programs and Features, turn off the Games feature and then recapture the VHD.
- C. Create an answer file that has `InboxGames` disabled. On a computer that runs Windows 7, attach the VHD. Run `Pkgmgr.exe` and specify the `/uu` parameter.
- D. Create an answer file that has `InboxGames` disabled. On a computer that runs Windows 7, attach the VHD. Run `Dism.exe` and specify the `/apply-unattend` parameter.

Correct Answer: D

Dism Deployment Image Servicing and Management (DISM) is a command-line tool used to service Windows images offline before deployment. You can use it to install, uninstall, configure, and update Windows features, packages, drivers, and international settings. Subsets of the DISM servicing commands are also available for servicing a running operating system. `/Apply-Unattend` (Applies an `unattend.xml` file to an image.) If you are updating device drivers using an unattended answer file, you must apply the answer file to an offline image and specify the settings in the `offlineServicing` configuration pass. If you are updating packages or other settings using an unattended answer file, you can apply the answer file to an offline or online image. Specify the settings in the `offlineServicing` configuration pass.

**QUESTION 3**

A user on your company network creates a new file and works on it during the day. He saves the file but decides he no longer needs it and deletes it just before the office closes. Overnight, a file and folder backup takes place. The next morning, the user decides he needs the file after all. He calls you for help.

What action can you take?

- A. Restore the file from the previous night's backup.
- B. Restore the Recycle Bin from the previous night's backup. The file will be in the restored Recycle Bin.
- C. Restore the file from an older backup.
- D. Ask the user to open his Recycle Bin.

Correct Answer: D

QUESTION 4

You have a computer that runs Windows 7.

You need to identify which applications were installed during the last week.

What should you do?

- A. From Reliability Monitor, review the informational events.
- B. From System Information, review the Software Environment.
- C. From Performance Monitor, review the System Diagnostics Report.
- D. From Performance Monitor, run the System Performance Data Collector Set.

Correct Answer: A

Reliability Monitor tracks a computer's stability. It can also tell you when events that could affect stability (such as the installation of a software application) occurred and whether any restarts were required after these events. Action Center monitors your computer and reports problems with security, maintenance, and related settings. The Windows Experience Index indicates the suitability of your current computer hardware for running resource intensive applications.

Review your computer's reliability and problem history

The stability index assesses your system's overall stability on a scale from 1 to 10. By selecting a specific period in time, you may review the specific hardware and software problems that have impacted your system. [How to use Reliability Monitor.](#)
