QUESTION 1

You have a computer that runs Windows 7. You install a third-party Web browser.

You discover that HTML files are no longer associated with Windows Internet Explorer.

You need to ensure that Internet Explorer starts whenever a HTML file is opened.

What should you do from Internet Options?

- A. Open the Connections tab and click Setup.
- B. Open the General tab and click Use default.
- C. Open the Programs tab and click Make default.
- D. Open the Programs tab and click Manage add-ons.

Correct Answer: C

Change your default web browser

This information applies to Internet Explorer 8 or Internet Explorer 7 running on Windows 7, Windows Vista, Windows Server 2008, Windows XP Service Pack 2 and Service Pack 3, and Windows Server 2003.

To make Internet Explorer your default web browser

1.

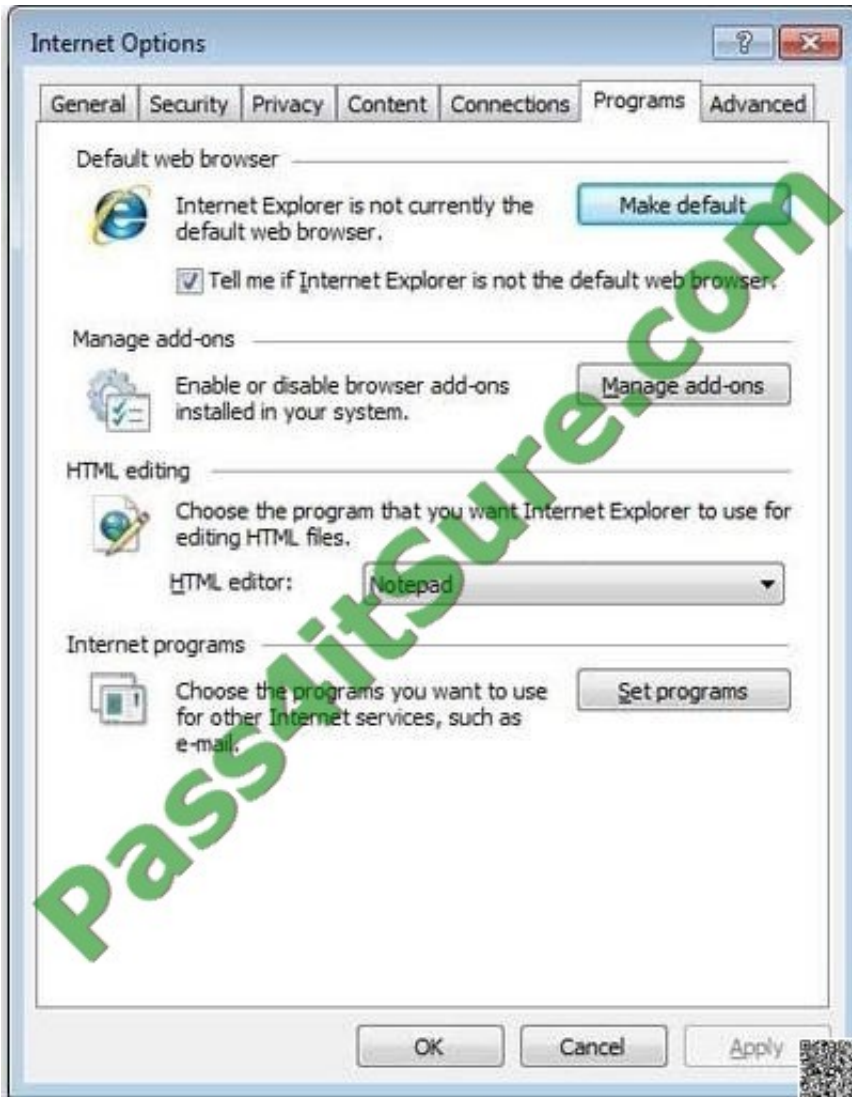

Click to open Internet Options.

2.

Click the Programs tab, and then click Make default.

3.

Click OK, and then close Internet Explorer.

QUESTION 2

Your company has Windows 7 Enterprise computers that do not have a Trusted Platform Module (TPM) installed. You need to enable BitLocker drive encryption on the operating system drives.

Which two actions should you perform? (Each correct answer presents part of the solution. Choose two.)

- A. Create a USB startup key.
- B. Configure the Require additional authentication at startup group policy setting.
- C. Create a network key location.
- D. Configure the Allow enhanced PINs for startup group policy setting.

Correct Answer: AD

Ref: [http://technet.microsoft.com/en-us/library/ee424319\(v=WS.10\).aspx](http://technet.microsoft.com/en-us/library/ee424319(v=WS.10).aspx)

QUESTION 3

You have a computer named Computer1 that runs Windows 7.

Computer1 has a shared printer.

You need to configure Computer1 so that only Administrators are authorized to shut down the computer.

What should you do?

- A. From User Accounts, modify the user profiles settings.
- B. From User Accounts, modify the User Account Control (UAC) settings.
- C. From the local computer policy, modify the Security Options.
- D. From the local computer policy, modify the User Rights Assignment.

Correct Answer: D

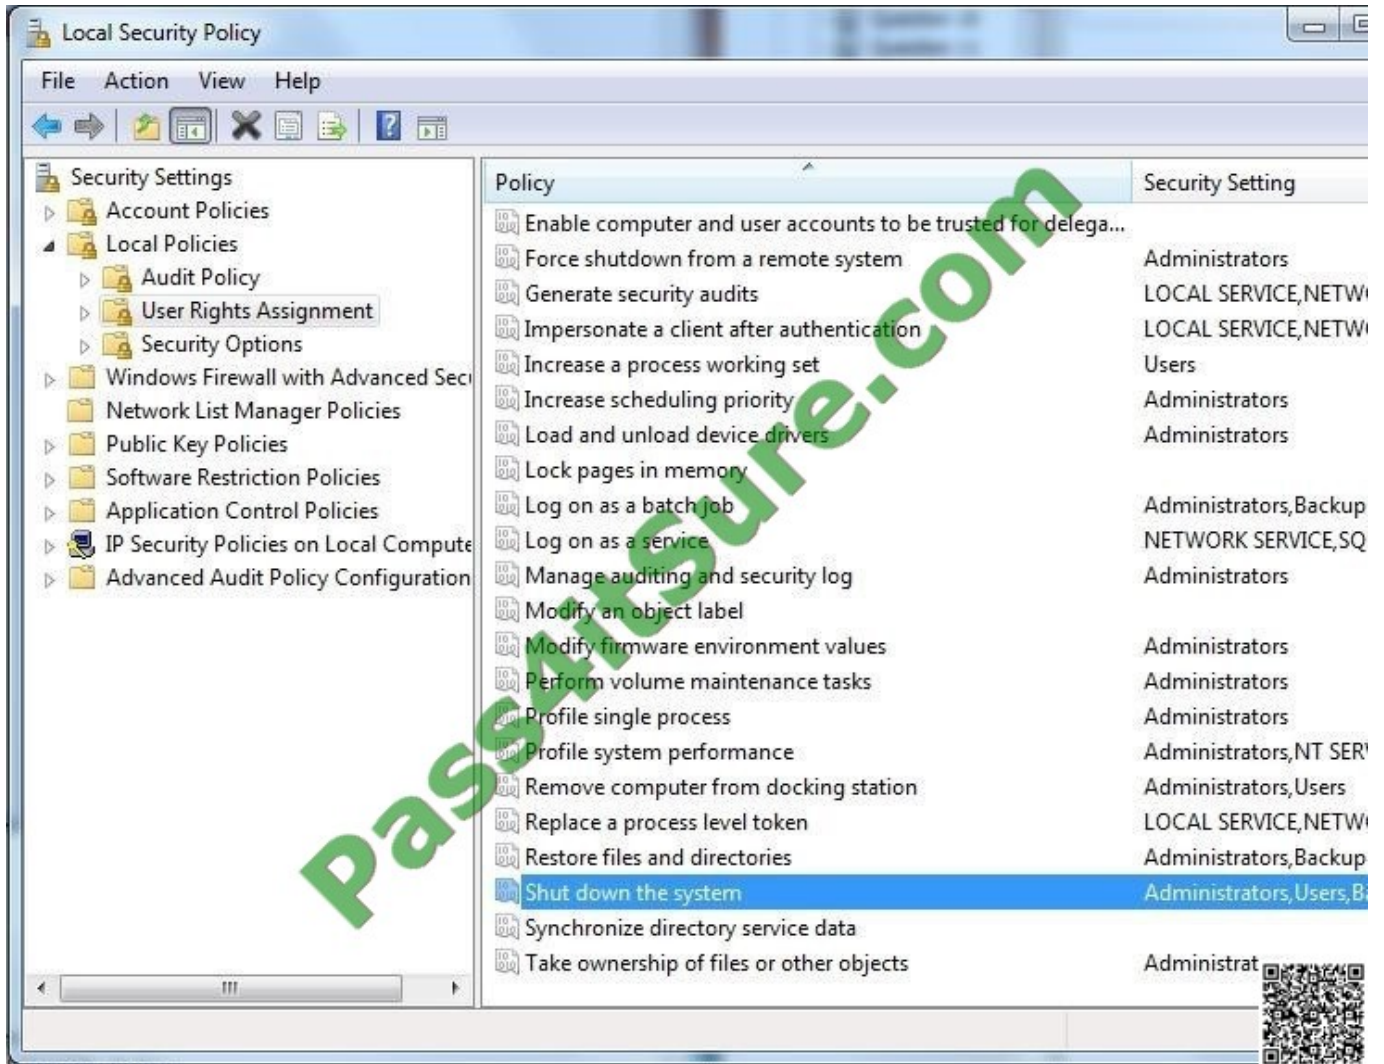

Shut down the system

Computer Configuration\Windows Settings\Security Settings\Local Policies\User Rights Assignment

Description

Determines which users logged on locally to the computer can shut down the operating system using the Shut Down command.

This user right is defined in the Default Domain Controller Group Policy object (GPO) and in the local security policy of workstations and servers.

QUESTION 4

You have a computer that runs Windows 7. IPv6 is disabled on the computer.

The computer has the following IPv4 settings:

IP address: 10.1.1.193

Subnet mask: 255.255.0.0

Default gateway: 10.1.1.194

Preferred DNS server: 10.1.1.195

You need to ensure that the computer can only communicate with computers on the local subnet.

What should you do?

A. Delete the default gateway address.

- B. Delete the preferred DNS server IP address
- C. Configure the subnet mask to use 255.255.255.0
- D. Configure the subnet mask to use 255.255.255.192

Correct Answer: A

Why gateways work Default gateways are important to make IP routing work efficiently. In most cases, the router that acts as the default gateway for TCP/IP hosts--either a dedicated router or a computer that connects two or more network segments--maintains knowledge of other networks in the larger network and how to reach them. TCP/IP hosts rely on default gateways for most of their communication needs with hosts on remote network segments. In this way, individual hosts are freed of the burden of having to maintain extensive and continuously updated knowledge about individual remote IP network segments. Only the router that acts as the default gateway needs to maintain this level of routing knowledge to reach other remote network segments in the larger internetwork. If the default gateway fails, communication beyond the local network segment may be impaired. To prevent this, you can use the Advanced TCP/IP Settings dialog box (in Network Connections) for each connection to specify multiple default gateways. You can also use the route command to manually add routes to the routing table for heavily used hosts or networks.

QUESTION 5

You have a computer that runs Windows 7.

Multiple users log on to the computer.

You need to deny one user access to removable devices on the computer. All other users must have access to the removable drives.

What should you do?

- A. From the local Group Policy, modify an application control policy.
- B. From Control Panel, modify the BitLocker Drive Encryption settings.
- C. From Device Manager, modify the settings of all removable devices.
- D. From the local Group Policy, modify a removable storage access policy.

Correct Answer: D
