QUESTION 1

You have a computer that runs Windows 7. You need to copy files to a virtual hard disk (VHD) file. What should you do first?

A. Run Dism.exe and specify the /image and /online parameters.

B. Open Windows Explorer, right-click the VHD file and select Open.

C. Run Diskpart.exe and then run the Select and Attach commands.

D. Run Imagex.exe and specify the /mountrw and /append parameters.

Correct Answer: C

QUESTION 2

You work as a desktop technician at ABC.com. The ABC.com network consists of a single Active Directory domain named ABC.com. The ABC.com network consists of a main office and a branch office. The two offices are connected using a VPN connection.

All servers on the network run Windows Server 2008. All client computers run Windows 7 Enterprise.

The main office contains a file server named ABC-File01. Users in the branch office access files on ABC- File01.

To improve performance for the branch office computers, you have enabled BranchCache in the branch office. BranchCache runs in host mode on a server named ABC-Cache01.

You notice that the performance of ABC-Cache01 is slower than usual. To troubleshoot the issue, you need to temporarily prevent the branch office computers connecting to ABC- Cache01 to retrieve cached content.

How can you temporarily disable the BranchCache connections?

A. Run the Netsh branchcache Set Localcache command from a command prompt on ABC-Cache01.

B. Run the Netsh branchcache Set Service command from a command prompt on ABC- Cache01.

C. Run the Netsh branchcache Reset command from a command prompt on ABC- Cache01.

D. Run the Netsh branchcache flush command from a command prompt on ABC-Cache01.

Correct Answer: D

QUESTION 3

You work as a desktop technician at ABC.com. The ABC.com network consists of a single Active Directory domain named ABC.com. All servers on the network run Windows Server 2008. The client computers run a mix of Windows 7 Enterprise and Windows Vista.

You are in the process of migrating the client computers from Windows Vista to Windows 7. You receive a modified Windows 7 image to deploy to client computers. You deploy the image to a test computer. You want to view the detailed

activation and license information of the test computer.

What program or command can you run the view the required information?

A. System Information

B. Net View

C. ImageX

D. Slmgr.vbs

Correct Answer: D

QUESTION 4

You have two computers named Computer1 and Computer2 that run Windows 7. You use Remote Desktop to connect from Computer1 to Computer2. You need to prevent the desktop background of Computer2 from being displayed when you use Remote Desktop to connect to Computer2. What should you do on Computer1?

A. From the Personalization options, change the theme.

B. From the System properties, modify the Remote settings.

C. From the Remote Desktop Connection options, modify the Performance setting.

D. From the Remote Desktop Connection options, modify the Display configuration settings.

Correct Answer: C

QUESTION 5

You work as a desktop technician at ABC.com. The ABC.com network consists of a single Active Directory domain named ABC.com. All servers on the network run Windows Server 2008. All client computers run Windows 7.

ABC.com has recently purchased 50 new computers comprising of desktop computers, laptop computers and tablet computers.

You deploy Windows 7 to all the new computers using a Windows 7 image.

After the deployment, you test the computers and discover that the pen interface does not work on the tablet computers.

What do you need to do to enable the pen interface on the tablet computers?

A. Open Device Manager and enable the pen interface.

B. Download the latest pen interface drivers.

C. Enable the Tablet PC Components.

D. Run the Add/Remove Hardware Wizard.

Correct Answer: C
