**QUESTION 1**

You install an application named App01 on a client computer running Windows 7. The application automatically appears in the system tray.

You need to establish if the application is slowing down the boot process. You must keep all device drivers functioning.

Which two actions should you perform in sequence?

(To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.)

Select and Place:

Reboot the computer.

From the **Advanced Boot Options** menu, enable **Safe Mode**.

From the **Advanced Boot Options** menu, enable **Debugging Mode**.

Using msconfig.exe, enable **Diagnostic startup**.

Using msconfig.exe, disable App01 from starting during the boot process.

Using msconfig.exe, disable all applications from starting during the boot process.

Correct Answer:

Using msconfig.exe, disable App01 from starting during the boot process.

Reboot the computer.

**QUESTION 2**

You are troubleshooting performance issues on a Windows 7 Enterprise client computer. An unfamiliar service is running on the computer.

You need to recommend the solutions that identify which process identifier (PID) is associated with the service. What should you do? (Choose all that apply.)

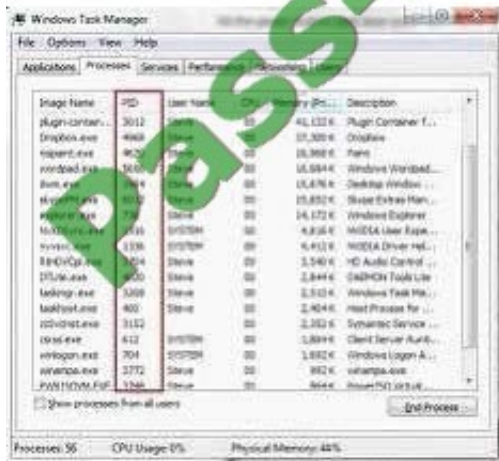

- A. Run the System Configuration utility (msconfig.exe) and view the Services tab.
- B. Run the sc query command.
- C. Use Windows Task Manager and view the Services tab.
- D. Run the sc queryex command.
- E. Run the Services management console.

Correct Answer: CD

[http://technet.microsoft.com/en-us/library/dd228921\(Ws.10\).aspx](http://technet.microsoft.com/en-us/library/dd228921(Ws.10).aspx) In order to get to know, or view, retrieve and identify the process ID or PID of the processes running in Windows operating system, users or administrators can make use of Task Manager. However, Task Manager does not display PID information by default. To display the PID value in Task Manager, go to Processes tab, click on View menu, and then click on Select Columns.... In the "Select Columns" or "Select Process Page Columns" dialog, tick and check the checkbox for PID (Process Identifier), and click OK.

QUESTION 3

Your company has a main office and a branch office. The branch office is configured as shown in the exhibit. (Click the Exhibit button.)

The branch office contains the following wireless devices:

A phone system that uses the 5.8 GHz wireless spectrum
A wireless access point that uses 802.11b
Printers that are compatible with 802.11b and 802.11g
100 portable computers that use 802.11b and 802.11g

Users report that they have an intermittent connection to the wireless access point.

You need to recommend a solution that ensures that users can connect to the wireless access point at all times.

What should you recommend?

- A. Move the wireless printers to the reception area.
- B. Move the wireless access point to another location.
- C. Replace the phone system with a DECT 6.0 phone system.
- D. Replace the wireless access point with an 802.11g wireless access point.

Correct Answer: B

QUESTION 4

All client computers on your company network run Windows 7 and are members of an Active Directory Domain Services domain.

All portable computers connect only to the 802.1X-authenticated wireless network. Wireless settings are set through the domain's Group Policy. You discover that new portable computers cannot be joined to the domain.

You need to ensure that new portable computers can be joined to the domain.

What should you do?

- A. Connect the portable computers to the wireless network by using a Bootstrap Profile.
- B. Connect the portable computers to the wireless network by using a Non-Broadcast Profile.
- C. Connect the portable computers to the domain by using smart card authentication.
- D. Connect the portable computers to the domain by using network security key authentication.

Correct Answer: A

QUESTION 5

A company has client computers that run Windows 7 Enterprise, a single subnet, and servers that run Windows Server 2008 R2.

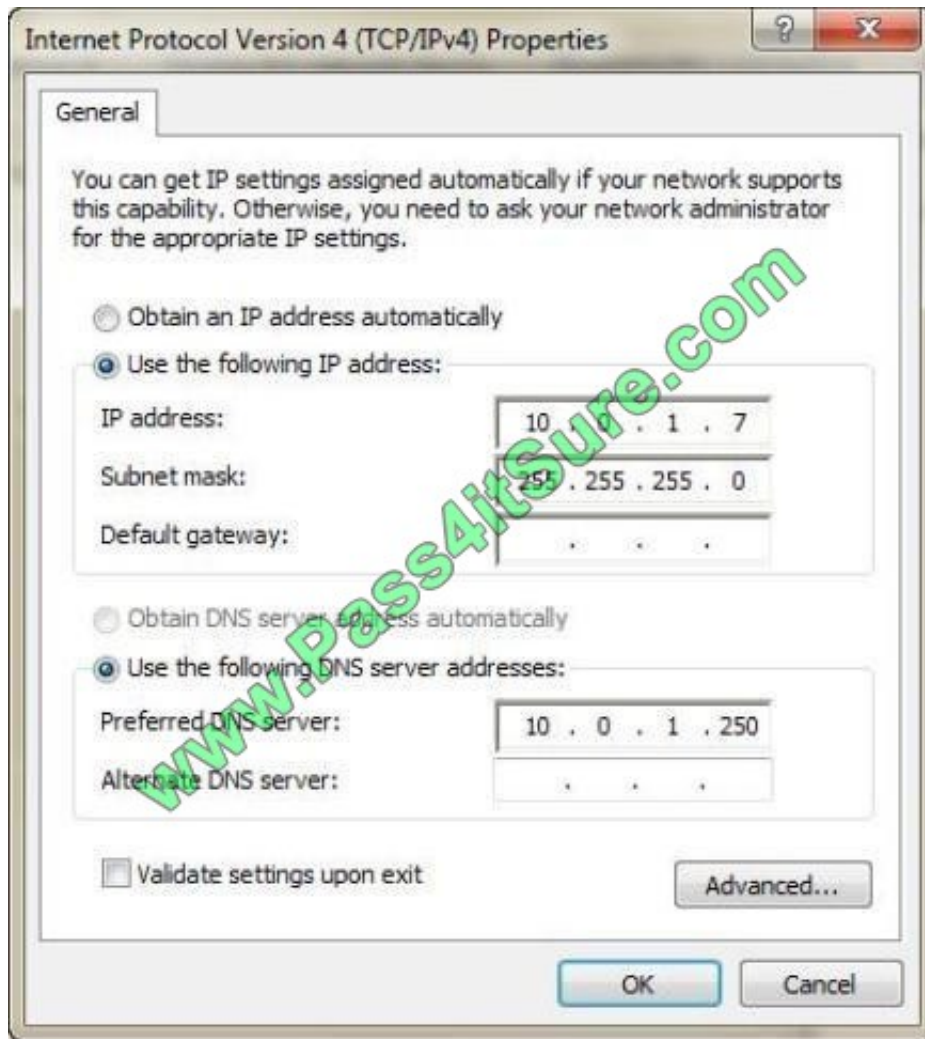

A client computer can connect to the company's servers by using IP addresses, but not by using fully qualified domain names (FQDNs).

You need to ensure that the client computer can resolve to the company's servers by using FQDNs.

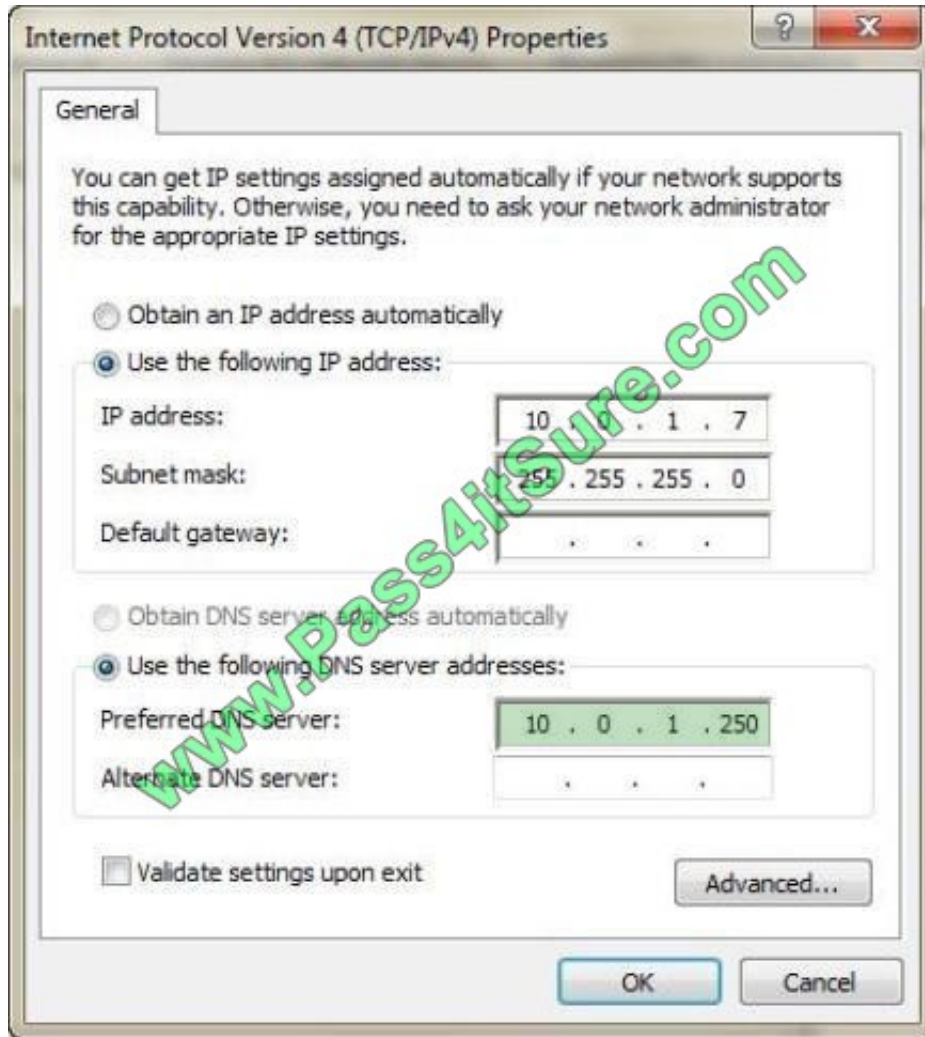

Which addresses should you change?

To answer, select the appropriate addresses in the work area.

Point and Shoot:
