**QUESTION 1**

Your company's network has client computers that run Windows 7. From a computer named Computer1, a user attempts to log on to the domain and receives the following message: The system cannot log you on to this domain because the system\\'s computer account in its primary domain is missing or the password on that account is incorrect. You need to ensure that the user can log on to the domain from Computer1. What should you do?

- A. Reset the password of the user account.
- B. Move the computer account for Computer1 to the Computers container.
- C. Run `netdomcomputername computer1`.
- D. Remove Computer1 from the domain and rejoin Computer1 to the domain.

Correct Answer: D

Re-create the computer account, join a workgroup, and then rejoin the domain. Refer to <http://support.microsoft.com/kb/810497>

---

**QUESTION 2**

Your network has client computers that run Windows Vista. What should you do?

- A. Use the Standard User Analyzer (SUA) Wizard.
- B. Run a virtual version of the Setup Analysis Tool (SAT).
- C. Use the Standard User Analyzer (SUA) tool.
- D. Run a stand-alone version of the Setup Analysis Tool (SAT).

Correct Answer: C

The Standard User Analyzer (SUA) tool enables you to test your applications to detect potential compatibility issues due to the User Account Control (UAC) feature. [http://technet.microsoft.com/en-us/library/cc765948\(v=ws.10\).aspx](http://technet.microsoft.com/en-us/library/cc765948(v=ws.10).aspx)

**QUESTION 3**

Your company has a single Active Directory Domain Services (AD DS) domain named contoso.com that uses Active DirectoryCintegrated DNS.

You deploy the Key Management Service (KMS) on a Windows 7 computer.

You need to ensure that Windows 7 client computers can locate the KMS host and perform activation.

Which two actions should you perform? (Each correct answer presents part of the solution.

Choose two.)

- A. Create and deploy a GPO firewall rule to allow RPC traffic through TCP port 1688 on the client computers.

- B. Deploy a Windows Server 2008 KMS host.
- C. Grant the KMS server the Full Control permission on the \_vlmcs.\_tcp.contoso.com DNS record.
- D. Grant the KMS server the Full Control permission on the \_msdcs.\_tcp.contoso.com DNS zone.

Correct Answer: AC

<http://technet.microsoft.com/en-us/library/ee939272.aspx> The KMS clients find the KMS host via a DNS SRV record (\_vlmcs.\_tcp) and then automatically attempt to discover and use this service to activate themselves. When in the 30 day Out

of Box grace period, they will try to activate every 2 hours. Once activated, the KMS clients will attempt a renewal every 7days.

Listening on Port:

Communication with KMS is via anonymous RPC. 1688 is the default TCP port used by the clients to connect to the KMS host. Make sure this port is open between your KMS clients and the KMS host.

---

#### QUESTION 4

You deploy Windows 7 to the computers that are used by your companys Web developers. All Web developer user accounts are in a single organizational unit (OU).

Internet Explorer is blocking pop-up windows for multiple internal Web applications that are hosted on different servers.

You need to use Group Policy to ensure that Internet Explorer does not block pop-up windows for internal Web applications.

What should you do?

- A. Enable Compatibility View in Internet Explorer.
- B. Add each server to the Intranet zone.
- C. Add each server to the Trusted Sites zone.
- D. Set the default security setting in Internet Explorer to Medium.

Correct Answer: B

Pop-up Blocker features

Pop-up Blocker is turned on by default. There are restrictions on the size and position of pop-up windows, regardless of the Pop-up Blocker setting. Pop-up windows cannot be opened larger than or outside the viewable desktop area. For

more information, see "Windows Restrictions" in this document.

When this functionality is enabled, automatic and background pop-up windows are blocked, but windows that are opened by a user click will still open in the usual manner. Note that sites in the

Trusted Sites and Local

Intranet zones do not have their pop-up windows blocked by default, as they are considered safe. This setting can be

configured in the Security tab in Internet Options. [http://technet.microsoft.com/en-us/library/cc784600\(v=ws.10\).aspx](http://technet.microsoft.com/en-us/library/cc784600(v=ws.10).aspx) hints:

internal web , so i choose intranet zones.

#### Local Intranet Zone

By default, the Local Intranet zone contains all network connections that were established by using a Universal

Naming Convention (UNC) path, and Web sites that bypass the proxy server or have names that do not include periods (for example, <http://local>), as long as they are not assigned to either the Restricted Sites or Trusted Sites zone. The

default security level for the Local Intranet zone is set to Medium (Internet Explorer 4) or Medium-low (Internet Explorer 5 and 6). Be aware that when you access a local area network (LAN) or an intranet share, or an intranet Web site by

using an Internet Protocol (IP) address or by using a fully qualified domain name (FQDN), the share or Web site is identified as being in the Internet zone instead of in the Local intranet zone.

#### Trusted Sites Zone

This zone contains Web sites that you trust as safe (such as Web sites that are on your organization's intranet or that come from established companies in whom you have confidence). When you add a Web site to the Trusted Sites zone, you

believe that files you download or that you run from the Web site will not damage your computer or data. By default, there are no Web sites that are assigned to the Trusted Sites zone, and the security level is set to Low.

### QUESTION 5

You are using Windows Deployment Services (WDS) to deploy new images of Windows 7 to 64-bit computers.

Technicians receive the error message shown in the exhibit when they attempt to boot by using PXE.

You need to ensure that the technicians can boot the client computers by using PXE.

What should you do? (Choose all that apply.)

- A. Run the bcdedit /set {ntldr} description "Windows 7 32-bit" command.
- B. Add a 64-bit boot image to the WDS server.
- C. Add a 64-bit install image to the WDS server.
- D. Add a 32-bit boot image to the WDS server.
- E. Run the bcdedit /set {ntldr} description "Windows 7 64-bit" command.
- F. Add a 32-bit install image to the WDS server.

Correct Answer: BD
