QUESTION 1

You administer computers that run Windows 8 Enterprise and are members of a workgroup.

Company policy requires that all computers receive the latest updates from a Windows Server Update Services (WSUS) server. Only updates that are digitally signed by Microsoft are installed.

You need to configure the computers to automatically receive and apply the updates.

What should you do first?

A. Configure the Configure Automatic Updates policy setting to Allow local admin to choose setting.

B. Configure the Configure Automatic Updates policy setting to Auto download and schedule for install.

C. Configure the Specify intranet Microsoft update service location policy setting to use the local WSUS server.

D. Enable the Allow signed updates from an intranet Microsoft update service location policy setting.

Correct Answer: C

Explanation: http://technet.microsoft.com/en-us/library/ff646957%28v=ws.10%29.aspx http://technet.microsoft.com/en-us/library/dd939906%28v=ws.10%29.aspx http://technet.microsoft.com/en-us/library/dd939900%28v=ws.10%29.aspx

QUESTION 2

A company has 100 Windows 8.1 client computers.

A computer fails and reports a kernel error.

You need to analyze the kernel error to identify what caused the failure.

What should you use?

A. A USB recovery drive created by using the advanced recovery tools on another Windows 8 computer

B. A system repair disk created by using Windows 7 File Recovery on another Windows 8 computer

C. The Windows 8 Debug/Checked Build installation media

D. A recovery disk created by using the Microsoft Diagnostics and Recovery Toolset (DaRT)

Correct Answer: A

Explanation: http://windows.microsoft.com/en-US/windows-8/create-usb-recovery-drive http://social.technet.microsoft.com/wiki/contents/articles/5738.windows- checked-build.aspx Reference: How to Deploy the DaRT Recovery Image as Part of a Recovery Partition

QUESTION 4

Your network contains an Active Directory domain. The domain contains client computers that run Windows 8 Enterprise.

Your company has a subscription to Windows Intune.

You plan to deploy an application named App1 that is stored on a Web server named Server1.

You need to ensure that all of the computers download the source files of App1 from Server1.

Which four actions should you perform in sequence? (To answer, move the appropriate four actions from the list of actions to the answer area and arrange them in the correct order.)

Select and Place:

From the Windows Intune Software Publisher, upload the settings.

From the Windows Intune administrator console, under Software, click **Managed Software**.

From the Windows Intune Software Publisher, select **Software installer**, and then specify the location of the source files of App1 on Server1.

From the Windows Intune administrator console, under Software, click **Managed Deployment**.

From the Windows Intune administrator console, under Software, click **Detected Software**.

From the Windows Intune Software Publisher, select **External link**, and then type the URL of Server1.

Correct Answer:

From the Windows Intune administrator console, under Software, click **Managed Software**.

From the Windows Intune Software Publisher, select **External link**, and then type the URL of Server1.

From the Windows Intune Software Publisher, select **Software installer**, and then specify the location of the source files of App1 on Server1.

From the Windows Intune Software Publisher, upload the settings.

From the Windows Intune administrator console, under Software, click **Managed Deployment**.

From the Windows Intune administrator console, under Software, click **Detected Software**.

Note:

Step 1: All software installer types are configured using the Windows Intune Software Publisher.

To start the Windows Intune Software Publisher

1. Open the Windows Intune administrator console.

2. In the workspace shortcuts pane, click the Software icon.

3. Start the Windows Intune Software Publisher in one of the following ways:

In the navigation pane, click Overview , and then click Add Software.

In the navigation pane, click Managed Software , and then click Add Software.

Step 2:

Adding Software as an External Link

This section describes how to add a link to a software installation package to Windows Intune using the Windows Intune Software Publisher.

To specify the installer type

1. Open the Windows Intune Software Publisher.

2. On the Software setup page, in Select how this software is made available to devices , select External link .

3. In Specify the URL , type the full path to the installation location in the app store, or the full path to the web app location. The path must be in the format http://www. .

4. Click Next .

Step 3:

The following procedures describe how to upload a Windows Installer (*.exe or *.msi) package

to Windows Intune by using the Windows Intune Software Publisher.

To specify the installer type

1. Start the Windows Intune Software Publisher.

2. On the Software setup page, in Select how this software is made available devices , select Software Installer . In Select the software installer file type , select Windows Installer (*.exe, *.msi) .

3. In Specify the location of the software setup files , enter the full path to the location of the .exe or .msi installation files, or clickBrowse to navigate and select to the folder where the setup files are stored. If additional files and subfolders are required for this installation, click Include additional files and subfolders from the same folder .

4. Click Next .

Step 4:

To review the software specifications and upload the software

1. On the Summary page, review the software settings that you specified.

You can scroll down as needed to view the complete summary.

2. To change any setting, click the appropriate page in the page navigation pane and then edit the selections on the displayed page.

3. When you have completed all of the software specifications, clickUpload .

4. The Upload page displays the status of the software as it uploads to Windows Intune.

QUESTION 5

You have client computers that run Windows 8 Pro.

You need to recommend a solution to roll back the Windows Defender engine and the malware signature files on the computers. The solution must minimize administrative effort.

What should you include in the recommendation?

A. File History

B. the Program and Features Control Panel item

C. Windows 7 File Recovery

D. System Restore points

Correct Answer: D

Explanation: A restore point is a representation of a stored state of your computer\\'s system files. You can use a restore point to restore your computer\\'s system files to an earlier point in time. http://technet.microsoft.com/en-us/library/ff398019.aspx
