**QUESTION 1**

A company plans to deploy Windows 8.1 to 100 client computers. Each client computer has 8 GB of memory. You have the following requirements:

Ensure that the operating system fully utilizes the available memory. Ensure that the operating system can be activated by using a Key Management Service (KMS) client setup key.

Minimize the operating system space requirements.

You need to identify the appropriate edition of Windows 8.1 to install on the client computers.

Which edition should you install?

- A. Windows 8.1 Enterprise 32-bit
- B. Windows 8.1 Enterprise 64-bit
- C. Windows 8.1 32-bit
- D. Windows 8.1 Pro 32-bit
- E. Windows 8.1 64-bit
- F. Windows 8.1 Pro 64-bit

Correct Answer: B

QUESTION 2

You are a desktop administrator for your organization.

You have a small group of Windows 8.1 computers you want to upgrade to Windows 8.1 Pro.

You need to ensure that these computers have Windows 8.1 Pro installed on them.

You receive product keys from your contracting team. What should you do next?

- A. Under settings, add roles > Windows 8 Pro. Then input the license file.
- B. Select Run > Regedit > HKLM > License. Then overwrite the dword license file.
- C. Under Control Panel, select "Add features to Windows 8", and choose "Add product key".
- D. Put in a Windows 8 DVD. Your current product key will be recognized, and then you can install Windows Pro.

Correct Answer: C

Explanation: <http://www.petri.co.il/change-windows-8-1-edition-without-reinstalling.htm> Easily Change Windows 8.1 Edition Without Reinstalling Solution

To switch between the editions of Windows you need to use a tool called Windows Anytime Upgrade, which is installed on your computer. You will also need the right product key.

C:\Users\Chaudhry\Desktop\1.jpg

In the Add features to Windows 8.1 window click I already have a product key (assuming, of course, you have one; if not, purchase one).

C:\Users\Chaudhry\Desktop\1.jpg

Enter your product key and wait for a second. If it's correct, you will see a message saying "Your key works. Continue when you're ready". If it's not correct, you'll see a message saying "This key won't work."

Check it and try again, or try a different key".

Accept the license terms and click Add features. The progress bar should move around for a few moments. ... Check to see that you have the right edition by looking at the computer properties.

C:\Users\Chaudhry\Desktop\1.jpg

Further Information:

<http://windows.microsoft.com/en-us/windows-8/feature-packs> Get more from Windows 8.1

If your PC is running Windows 8.1, you can get Windows 8.1 Pro Pack and enjoy all the features of Windows 8.1 Pro as well as Windows Media Center.

3.

Tap or click Add features to Windows 8.1 and then do one of the following:

If you need to purchase a product key, tap or click I want to buy a product key online. Follow the steps to purchase and enter a product key. If you already have a product key, tap or click I already have a product key.

4. Enter your product key and click Next.

5. Read the license terms, select the check box to accept the license terms, and then click Add features.

QUESTION 3

You are a system administrator for a local accounting firm. Your company uses Windows 8.1 Pro desktop computers. All computers have a secondary D: drive.

You want to enable File History for all your users. You create the folder structure D:

\Backup\File History on all user computers. You launch the File History application and verify that it is turned on. Next, you click Select drive in Configure File History Settings. However, under Copy Files to: you get the message, "No

drives were found."

You need to successfully configure file history.

What should you do?

- A. Share the File History folder.
- B. Grant NTFS rights to the File History folder.
- C. Use a network drive for file history.
- D. Verify that your local drive has enough free space.

Correct Answer: C

Explanation: <http://windows.microsoft.com/en-us/windows-8/set-drive-file-history> Set up a drive for File History Before you start using File History to back up your files, you need to first select where your backups are saved. You can select an externally connected drive, such as a USB drive, or you can save to a drive on a network. There are other choices, but these two provide the best options to help protect your files against a crash or other PC problems.

QUESTION 4

Your company plans to deploy Windows 8.1 Enterprise to all client computers.

Users in the development department and the sales department will each receive a laptop that runs a corporate image of Windows 8.1 Enterprise.

In addition to running the corporate image of Windows 8.1 Enterprise, the users have the requirements described in the following table.

Department	Requirement
Development	The users must be able to test applications in an isolated environment. The test environment must have complete access to all hardware resources and support the use TPM for BitLocker.
Sales	The users must be able to demonstrate products to customers in a clean environment that can be rolled back easily between demonstrations.

You need to recommend the appropriate technology for each department.

What should you recommend? (To answer, select the appropriate technology for each department in the answer area.)

Hot Area:

Development:

- Client Hyper-V
- Dual-boot installation
- Windows To Go

Sales:

- Client Hyper-V
- Dual-boot installation
- Windows To Go

Correct Answer:

Development:

- Client Hyper-V
- Dual-boot installation
- Windows To Go

Sales:

- Client Hyper-V
- Dual-boot installation
- Windows To Go

QUESTION 5

A company has an Active Directory Domain Services (AD DS) domain with Windows 8.1 client computers.

You need to minimize the amount of Trusted Platform Module (TPM) authorization information that is stored in the registry.

What should you do?

- A. Create a Group Policy object (GPO) that sets the Configure the level of TPM owner authorization information available to operating system policy setting to None.
- B. Create a Group Policy object (GPO) that enables the Turn on TPM Local Encryption policy setting.
- C. Create a Group Policy object (GPO) that disables the Configure the level of TPM owner authorization information available to operating system policy setting.
- D. Enable Platform Configuration Register indices (PCRs) 0, 2, 4, and 11 for the Configure TPM validation profile for native UEFI firmware configuration policy setting.

Correct Answer: A

Explanation: http://technet.microsoft.com/en-us/library/jj679889.aspx#BKMK_tpmgp_oauthos Configure the level of TPM owner authorization information available to the operating system

This policy setting configures how much of the TPM owner authorization information is stored in the registry of the local computer. Depending on the amount of TPM owner authorization information that is stored locally, the Windows operating

system and TPM- based applications can perform certain actions in the TPM that require TPM owner authorization without requiring the user to enter the TPM owner password.

There are three TPM owner authentication settings that are managed by the Windows operating system.

You can choose a value of Full, Delegate, or None. Full - This setting stores the full TPM owner authorization, the TPM administrative delegation blob, and the TPM user delegation blob in the local registry. With this setting, you can use the

TPM without requiring remote or external storage of the TPM owner authorization value. This setting is appropriate for scenarios that do not require you to reset the TPM anti-hammering logic or change the TPM owner authorization value.

Some TPM- based applications may require that this setting is changed before features that depend on the TPM anti-hammering logic can be used. Delegated - This setting stores only the TPM administrative delegation blob and the TPM

user delegation blob in the local registry. This setting is appropriate for use with TPM-based applications that depend on the TPM antihammering logic. When you use this setting, we recommend using external or remote storage for the full

TPM owner authorization value--for example, backing up the value in Active Directory Domain Services (AD DS).

None - This setting provides compatibility with previous operating systems and applications. You can also use it for scenarios when TPM owner authorization cannot be stored locally. Using this setting might cause issues with some TPM-

based applications.

Further Information:

<http://technet.microsoft.com/en-us/library/cc770660.aspx> Active Directory Domain Services (AD DS) can be used to store Trusted Platform Module (TPM) recovery information.

There is only one TPM owner password per computer; therefore, the hash of the TPM owner password is stored as an attribute of the computer object in AD DS. The attribute has the common name (CN) of ms-TPM-OwnerInformation.
http://

www.group-policy.com/ref/policy/2859/Configure_TPM_platform_validation_profile Configure TPM platform validation profile

This policy setting allows you to configure how the computer's Trusted Platform Module (TPM) security hardware secures the BitLocker encryption key. This policy setting does not apply if the computer does not have a compatible TPM or if

BitLocker has already been turned on with TPM protection.

If you enable this policy setting before turning on BitLocker, you can configure the boot components that the TPM will validate before unlocking access to the BitLocker-encrypted operating system drive. If any of these components change while BitLocker protection is in effect, the TPM will not release the encryption key to unlock the drive and the computer will instead display the BitLocker Recovery console and require that either the recovery password or recovery key be provided to unlock the drive.

If you disable or do not configure this policy setting, the TPM uses the default platform validation profile or the platform validation profile specified by the setup script. A platform validation profile consists of a set of Platform Configuration Register (PCR) indices ranging from 0 to 23. The default platform validation profile secures the encryption key against changes to the Core Root of Trust of Measurement (CRTM), BIOS, and Platform Extensions (PCR 0), the Option ROM Code (PCR 2), the Master Boot Record (MBR) Code (PCR 4), the NTFS Boot Sector (PCR 8), the NTFS Boot Block (PCR 9), the Boot Manager (PCR 10), and the BitLocker Access Control (PCR 11). The descriptions of PCR settings for computers that use an Extensible Firmware Interface (EFI) are different than the PCR settings described for computers that use a standard BIOS. The BitLocker Drive Encryption Deployment Guide on Microsoft TechNet contains a complete list of PCR settings for both EFI and standard BIOS. Warning: Changing from the default platform validation profile affects the security and manageability of your computer. BitLocker's sensitivity to platform modifications (malicious or authorized) is increased or decreased depending upon inclusion or exclusion (respectively) of the PCRs.
