**QUESTION 1**

You are creating an access rule as shown in the exhibit. (Click the Exhibit button.)

Rule name: (DeviceType)

Access level: Allow access

☒ Device family: [Browse]

☐ Device model: [Browse]

OK Cancel

Use the drop-down menus to select the answer choice that completes each statement.

Hot Area:

Answer Area

You are in the process of [answer choice]

- creating a new discovery method.
- creating a new Exchange Server connector.
- configuring an existing discovery method.
- configuring an existing Exchange Server connector.

Once you create a device family access rule by using these settings, devices that are discovered by Microsoft System Center 2012 R2 Configuration Manager from the family you choose will be [answer choice]

- allowed to access Microsoft Exchange Server always.
- allowed to access Microsoft Exchange Server only if the Require Device Encryption policy setting is enabled.
- allowed to access Microsoft Exchange Server only if the External mobile device management option is enabled.
- denied access to Microsoft Exchange Server always.

Correct Answer:

**Answer Area**

You are in the process of [answer choice]

creating a new discovery method.
creating a new Exchange Server connector.
configuring an existing discovery method.
configuring an existing Exchange Server connector.

Once you create a device family access rule by using these settings, devices that are discovered by Microsoft System Center 2012 R2 Configuration Manager from the family you choose will be [answer choice]

allowed to access Microsoft Exchange Server always.
allowed to access Microsoft Exchange Server only if the Require Device Encryption policy setting is enabled.
allowed to access Microsoft Exchange Server only if the External mobile device management option is enabled.
denied access to Microsoft Exchange Server always.

QUESTION 2

You have a deployment of Microsoft System Center 2012 R2 Configuration Manager. All client computers have the Configuration Manager client installed.

You deploy two applications named App1 and App2. App1 is a large application that is used infrequently.

Some users receive notifications indicating low disk space on their client computer.

You need to uninstall App1 from any client computer that has both App1 and App2 installed and that has less than 1GB of free disk space.

What should you do? To answer, select the appropriate options in the answer area.

Hot Area:

Answer Area

Identify computers by:

Creating a configuration item.
Creating a software category.
Creating a software metering rule.
Creating a device collection that uses a query rule.
Creating a user data and profiles configuration item.

Remediation plan:

Retire App1.
Create a deployment for App1.
Create an automatic deployment rule.
Create and deploy an App-V package for App1.

Correct Answer:

**Answer Area**

Identify computers by:

Creating a configuration item.
Creating a software category.
Creating a software metering rule.
Creating a device collection that uses a query rule.
Creating a user data and profiles configuration item.

Remediation plan:

Retire App1.
Create a deployment for App1.
Create an automatic deployment rule.
Create and deploy an App-V package for App1.

QUESTION 3

You need to meet the technical requirement of Computer3.

What are three possible ways to achieve this goal? Each correct answer presents a complete solution.

- A. Create a new antimalware policy.
- B. Increase the priority of an antimalware policy.
- C. Delete an antimalware policy.
- D. Modify the membership of Collection2.
- E. Modify the membership of Collection3.

Correct Answer: BCD

QUESTION 4

You have a deployment of Microsoft System Center 2012 R2 Configuration Manager.

You have laptops that run Windows 7 Enterprise and tablets that run Windows 8.1 Enterprise. All client computers have the Configuration Manager client installed.

You have an internally developed application named App1. There is a 32-bit version of App1 and a Windows Store version of App1. You plan to deploy App1 by using Configuration Manager.

You need to ensure that the laptops receive the 32-bit version of App1 only and the tablets receive the Windows Store app version of App1 only. The solution must minimize administrative effort.

Which three actions should you perform in sequence from Configuration Manager? To answer, move the appropriate

actions from the list of actions to the answer area and arrange them in the correct order.

Select and Place:

Actions	Answer Area
Import two applications.	
Create one application.	
Deploy one application.	
Deploy two applications.	
Create one deployment type.	
Create two deployment types.	

Correct Answer:

Actions	Answer Area
Import two applications.	Create one application.
	Create two deployment types.
	Deploy one application.
Deploy two applications.	
Create one deployment type.	

QUESTION 5

Your network contains one Active Directory domain. The domain contains a deployment of Microsoft System Center 2012 R2 Configuration Manager. Configuration Manager is integrated with Windows Intune. All client computers and devices

are managed by using Configuration Manager.

You have a Wi-Fi network named Wi-Fi1.

You create a Wi-Fi profile named Wi-Fi1 and provision the profile for Windows RT 8.1 devices.

You create a collection named Collection1 that contains all of the devices that run Windows RT 8.1.

You need to ensure that the users who use the Windows RT 8.1 devices can connect to Wi-Fi1 without having to configure the wireless settings manually. The Wi-Fi profile must NOT be used on any other devices.

What should you do?

- A. Deploy Wi-Fi1 to the All Users collection.
- B. Deploy Wi-Fi1 to Collection1.
- C. Deploy Wi-Fi1 to the All Mobile Devices collection.
- D. Modify the profile properties of Wi-Fi1.

Correct Answer: A
