## QUESTION 1

Your network contains an Active Directory domain. The domain contains client computers that are managed by using System Center Configuration Manager (Current Branch). The computers are configured as shown in the following table.

Number of computers	Operating system
1,000	Windows 10 Enterprise
10	Windows 10 Pro

You need to ensure that you can run a virtual application on all the computers. What should you do?

- A. Deploy a provisioning package that upgrades all the computers that run Windows 10 Pro to Windows 10 Enterprise.
- B. Deploy a certificate profile.
- C. Enable hardware virtualization support for all the computers.
- D. From Application Management, create Microsoft Application Virtualization (App-V) virtual environment.
- E. Deploy the Microsoft Application Virtualization (App-V) client to all the computers.
- F. From a Group Policy object (GPO), enable Microsoft User Experience Virtualization (UE-V)
- G. Deploy a Windows 10 Edition Upgrade policy

Correct Answer: E

## QUESTION 2

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while

others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

Your company uses a network ID of 10.0.0.0/8.

The company opens a new office that uses a network ID of 10.5.0.0/16. The office has three floors. Each floor has a VLAN. The network ID of each VLAN is 10.5.10.0/24, 10.5.20.0/24, and 10.5.30.0/24.

You create a distribution point for the new office.

You need to ensure that the clients in the new office obtain content from the new distribution point.

Solution: Create an Active Directory site associated to the 10.5.0.0/16 subnet, and then create an Active Directory site boundary.

Does this meet the goal?

A. Yes

B. No

Correct Answer: B

### QUESTION 3

You have a deployment of System Center Configuration Manager (Current Branch).

You configure the Backup Site Server maintenance task to back up Configuration Manager to a local folder.

You need to create a script to restart the Configuration Manager server after the backup completes.

How should you create the script? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Hot Area:

Script file to create:

▼	
<input type="checkbox"/>	AfterBackup.bat
<input type="checkbox"/>	ApplicationHost.config
<input type="checkbox"/>	Backup.xml
<input type="checkbox"/>	BackupTask.ps1

Script file location:

▼	
<input type="checkbox"/>	Program Files\Microsoft Configuration Manager\inboxes\schedule.box
<input type="checkbox"/>	Program Files\Microsoft Configuration Manager\inboxes\smsbkup.box
<input type="checkbox"/>	Program Files\Microsoft Configuration Manager\scripts
<input type="checkbox"/>	Windows\WinSxS\Backup

Correct Answer:

Script file to create:

AfterBackup.bat
ApplicationHost.config
Backup.xml
BackupTask.ps1

Script file location:

Program Files\Microsoft Configuration Manager\inbox\schedule.box
Program Files\Microsoft Configuration Manager\inbox\smsbkup.box
Program Files\Microsoft Configuration Manager\scripts
Windows\WinSxS\Backup

#### QUESTION 4

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while

others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You plan to deploy System Center Configuration Manager (Current Branch) by using an initial pilot deployment.

The pilot deployment will contain five computers that run Windows 10.

You need to deploy the Configuration Manager client to the five computers only.

Solution: From each client, you run ccmsetup.exe.

Does this meet the goal?

A. Yes

B. No

Correct Answer: A

References: <https://docs.microsoft.com/en-us/sccm/core/clients/deploy/deploy-clients-to-windows-computers>

#### QUESTION 5

You have a deployment of System Center Configuration Manager (Current Branch).

You have offices in Montreal and Seattle. Each office is configured as an Active Directory site. Objects in each office are part of a device collection.

You need to deploy software to clients in the Montreal office from servers in the Montreal office only.

What should you do?

- A. Configure a boundary group for the client assignment.
- B. Create a boundary for the Montreal office that uses Active Directory sites.
- C. Add a management point in the Montreal office.
- D. Create a user collection that contains the users in the Montreal office.

Correct Answer: B
