QUESTION 1

You have a deployment of System Center Configuration Manager (Current Branch).

Microsoft Office 365 ProPlus is deployed to all client computers.

You need to ensure that all updates for Office 365 are deployed from Configuration Manager by using the least amount of administrative effort.

Which three actions should you perform? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

A. Create an automatic deployment rule (ADR)

B. Add a product to the software update point

C. Create a configuration baseline

D. Create an application

E. Update the Client Settings

F. Create a task sequence

Correct Answer: ABE

QUESTION 2

You have a deployment of System Center Configuration Manager (Current Branch).

You need to recommend a solution to manage and reduce the attack surface of applications used in your environment.

What should you include in the recommendation?

A. Windows Defender Exploit Guard

B. antimalware policies

C. Windows Defender Advanced Threat Protection (ATP) policies

D. compliance policies

Correct Answer: A

QUESTION 3

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while

others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have a deployment of System Center Configuration Manager that collects the hardware inventory of Windows and Linux client computers.

You need to capture additional information about the hardware on the Linux computers.

Solution: You extend the inventory by importing a new inventory class.

Does this meet the goal?

A. Yes

B. No

Correct Answer: A

References: https://docs.microsoft.com/en-us/sccm/core/clients/manage/inventory/extend-hardware-inventory

QUESTION 4

You have a deployment of System Center Configuration Manager (Current Branch).

5,000 computers have the Configuration Manager client installed.

You need to deploy an online-licensed app named App1 from the Microsoft Store for Business to all Configuration Manager clients.

What should you do first?

A. From the Configuration Manager console, launch the Microsoft Azure Services Wizard and select Microsoft Store for Business.

B. From the Microsoft Store for Business portal, create a new AutoPilot deployment profile.

C. From the Microsoft Store for Business portal, invite a line-of-business (LOB) publisher to your organization.

D. From the Configuration Manager console, create a new collection.

Correct Answer: A

References: https://docs.microsoft.com/en-us/sccm/core/servers/deploy/configure/Azure-services-wizard

QUESTION 5

Note: This question is part of a series of questions that use the same scenario. For your convenience, the scenario is

repeated in each question. Each question presents a different goal and answer choices, but the text of the scenario is exactly the same in each question in this series.

Start of repeated scenario.

Your network contains an Active directory forest named adatum.com.

All client computers run Windows 10 Enterprise. All the computers are named by using the name of their respective department and an incremental three-digit number. For example, the first computer in the sales department is named

Sales001.

Several managers use tablets that run Windows 10 and have 3 GB of RAM. All other client computers have at least 8 GB RAM.

Adatum.com is synchronized to Microsoft Azure Active Directory.

Your company implements the Microsoft Store for Business.

You have a deployment of System Center Configuration Manager (Current Branch) that has discovery configured. All the client computers have the Configuration Manager client installed.

The company uses the applications shown in the following table.

Application name	Description
App1	A Microsoft Application Virtualization (App-V) virtual application
App2	An app that the company purchased from the Microsoft Store for Business and is licensed for offline use
App3	A 64-bit application that is deployed to all the client computers
SalesAppLite	An application used by users in the sales department on computers that have 3 GB of RAM or less
SalesAppFull	An application used by the sales department users on computers that have more than 3 GB of RAM

The company identifies the following requirements for software deployments:

View the Upgrade Readiness data of all the client computers.

Deploy App1 to the client computers in the marketing department.

Deploy App2 to the client computers in the human resources (HR) department.

Monitor the usage of App3.

Deploy SalesAppLite to sales department computers that have 3 GB of RAM or less.

Deploy SalesAppFull to sales department computers that have more than 3 GB of RAM.

You create a cloud-based distribution point that has a public name of d1594d4527614a09b934d470.

End of repeated scenario.

The company creates a new department named research.

You need to deploy App2 and App3 to the client computers in the research department.

How should you configure the membership rule for the Research collection? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.
