**QUESTION 1**

Scenario:

You are a network administrator for a company named Contoso, Ltd. The network is configured as shown in the exhibit.

You install the Remote Access server role on Server2. Server2 has the following configured:

1. Network address translation (NAT)
 2. The DHCP Server server role
- The Security Policy of Contoso states that only TCP ports 80 and 443 are allowed from the Internet to Server2.

You identify the following requirements:

1. Add 28 devices to subnet2 for a temporary project.
- 2.

Configure Server2 to accept VPN connections from the Internet.

3.

Ensure that devices on Subnet2 obtain TCP/IP settings from DHCP on Server2.

End of repeated scenario

What should you do to meet the DHCP connectivity requirement for Subnet2?

- A. Install the Routing role service on Server2.
- B. Install the IP address Management (IPAM) Server feature on Server2.
- C. Install the Routing role service on Server1.
- D. Install the DHCP Server server role on Server1.

Correct Answer: C

QUESTION 2

You have a server named Server1 that runs Windows Server 2016.

Server1 has two network cards. One network card connects to your internal network and the other network card connects to the Internet.

You plan to use Server1 to provide Internet connectivity for client computers on the internal network.

You need to configure Server1 as a network address translation (NAT) server.

Which server role or role service should you install on Server1 first?

- A. Network Controller
- B. Web Application Proxy
- C. Routing
- D. DirectAccess and VPN (RAS)

Correct Answer: C

QUESTION 3

Note: This question is part of a series of questions that use the same scenario. For your convenience, the scenario is repeated in each question. Each question presents a different goal and answer choices, but the text of the scenario is exactly the same in each question in this series.

Your network contains an Active Directory domain named contoso.com. The functional level of the domain is Windows Server 2012.

The network uses an address space of 192.168.0.0/16 and contains multiple subnets.

The network is not connected to the Internet.

The domain contains three servers configured as shown in the following table.

| Server name | Configuration |
|-------------|----------------------------------|
| Server1 | Domain controller and DNS server |
| Server2 | Member server |
| Server3 | DHCP server |

Client computers obtain TCP/IP settings from Server3.

You add a second network adapter to Server2. You connect the new network adapter to the Internet. You install the Routing role service on Server2.

Server1 has four DNS zones configured as shown in the following table.

| DNS zone name | Type | Zone file name |
|----------------------|-----------------------------|--------------------------|
| Contoso.com | Active Directory-integrated | None |
| Fabrikam.com | Primary | Fabrikam.com.dns |
| Tailspintoys.com | Primary | Tailspintoys.com.dns |
| 168.192.in-addr.arpa | Primary | 168.192.in-addr.arpa.dns |

You need to ensure that when a computer is removed from the network, the associated records are deleted automatically after 15 days.

Which two actions should you perform? Each correct answer presents part of the solution.

- A. Create a scheduled task that runs the Remove-Computer cmdlet.
- B. Modify the Zone Aging/Scavenging Properties of the zone.
- C. Modify the Time to live (TTL) value of the start of authority (SOA) record.
- D. Set the Scavenging period of Server1.
- E. Modify the Expires after value of the start of authority (SOA) record.

Correct Answer: BD

[https://technet.microsoft.com/en-us/library/cc771362\(v=ws.10\).aspx](https://technet.microsoft.com/en-us/library/cc771362(v=ws.10).aspx)

QUESTION 4

Your network contains an Active Directory domain named contoso.com that contains a domain controller named DC1.

All DNS servers for the network run BIND 10.

Your perimeter network contains a DHCP server named DHCP1 that runs Windows Server 2016. DHCP1 is a member of a workgroup named WORKGROUP. DHCP1 provides IP address leases to guests accessing the Wi-Fi network.

Several engineers access the network remotely by using a VPN connection to a remote access server that runs Windows Server 2016. All of the VPN connections use certificate-based authentication and are subject to access policies in

Network Policy Server (NPS). Certificates are issued by an enterprise certification authority (CA) named CA1.

All Windows computers on the network are activated by using Key Management Service (KMS). On-premises users use Remote Desktop Services (RDS).

You plan to deploy IP Address Management (IPAM) to the network. Which action can you perform on the network by using IPAM?

- A. Manage the DNS zones on the DNS servers.
- B. Audit logon events on the RDS server.
- C. Audit authentication events from DC1.
- D. Manage activations on the KMS server.

Correct Answer: C

QUESTION 5

You have a DNS server named Server1 that runs Windows Server 2016. Server1 has two Active Directory-integrated zones named contoso.com and adatum.com.

All client computers run Windows 10.

Server1 recently experienced millions of erroneous DNS queries causing a denial of service.

You need to reduce the likelihood that a similar attack will cause a denial of service. The solution must ensure that Server1 continues to resolve names for clients.

What should you do?

- A. Sign both adatum.com and contoso.com zones.
- B. Implement DNS-based Authentication of named Entities (DANS).
- C. Configure DNS policies on Server1.
- D. Enable Response Rate Limiting (RRL) on Server1.

Correct Answer: D
