QUESTION 1

Your network contains an Active Directory domain named contoso.com. The domain contains two servers named Server1 and Server2 that run Windows Server 2016. The servers have the same hardware configuration.

You need to asynchronously replicate volume F: from Server1 to Server2.

What should you do?

- A. Install the Failover Clustering feature and create a new cluster resource group.
- B. Run Set-DfsrServiceConfiguration and specify the ?PCPort parameter.
- C. Run New-SRPartnership and specify the ?eplicationMode parameter.
- D. Install the Failover Clustering feature and use Cluster Shared Volumes (CSV).

Correct Answer: C

NOTE: If you want to setup **Asynchronous** use the ~~(New-SRPartnership -ReplicationMode Asynchronous)~~
(Primary node)

-ReplicationMode

Specifies the desired mode of replication for this source and destination pair. The acceptable values for this parameter are:

Synchronous or 1. The synchronous mode requires all writes to commit on the destination server and on the source server, which guarantees data integrity between computers.

Asynchronous or 2. The asynchronous mode writes to the source server without waiting for the destination server, which allows for replication over high latency, geographic networks. The default value is synchronous.

The default asynchronous recovery point alert time is 5 minutes. You can modify it by using the SetSRPartnership cmdlet. The alert time has no effect on replication behavior, only on reporting.

QUESTION 2

You have two Hyper-V hosts named Server1 and Server2 that run Windows Server 2016. Server1 and Server2 connect to the same network. Server1 and Server2 have virtual switches configured as shown in the following table.

Switch name	Host	Type	VLAN ID
Switch1	Server1	External	2
Switch2	Server2	External	4
Switch3	Server2	Internal	Not applicable

You have nine virtual machines configured as shown in the following table.

Virtual machine name	Connected to	VLAN ID
VM1	Switch1	2
VM2	Switch1	Not applicable
VM3	Switch1	4
VM4	Switch2	2
VM5	Switch2	Not applicable
VM6	Switch2	4
VM7	Switch3	2
VM8	Switch3	Not applicable
VM9	Switch3	4

All of the virtual machines are configured to have IP addresses from the same network segment. The firewall on each of the virtual machines is configured to allow network connectivity. To which virtual machines can you connect from VM1 and VM2? To answer, select the appropriate options in the answer area.

Hot Area:

Answer Area

Virtual machines to which you can connect from VM1:

- VM4 only
- VM4 and VM7
- VM2, VM4, and VM5
- None

Virtual machines to which you can connect from VM2:

- VM5 only
- VM1 and VM3
- VM5 and VM8
- VM5, VM7, VM8, and VM9

Correct Answer:

Answer Area

Virtual machines to which you can connect from VM1:

▼

VM4 only
VM4 and VM7
VM2, VM4, and VM5
None

Virtual machines to which you can connect from VM2:

▼

VM5 only
VM1 and VM3
VM5 and VM8
VM5, VM7, VM8, and VM9

QUESTION 3

You have a server named Server1 that runs Windows Server 2016.

You plan to deploy Internet Information Services (US) in a Windows container.

You need to prepare Server1 for the planned deployment.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Select and Place:

Actions

- Install the Hyper-V server role.
- Install the Base Container Images.
- Install the Container feature.
- Install the Web Server role.
- Install Docker.

Answer Area

1.
2.
-

Correct Answer:

Actions	Answer Area
Install the Hyper-V server role.	1. Install the Container feature.
	2. Install Docker.
	3. Install the Base Container Images.
Install the Web Server role

QUESTION 4

You have a server named Server1 that runs Windows Server 2016. The Docker daemon runs on Server1. You need to ensure that members of a security group named Docker Administrators can administer Docker. What should you do?

- A. Run the sc privs command.
- B. Modify the Security settings of Docker.exe.
- C. Run the Set-Service cmdlet.
- D. Run the sc config command.

Correct Answer: D

The preferred method for configuring the Docker Engine on Windows is using a configuration file. The configuration file can be found at \\C:\ProgramData\Docker\config\daemon.json\\. If this file does not already exist, it can be created.

Note: The Docker Engine can also be configured by modifying the Docker service using the sc config command.

<https://docs.microsoft.com/en-us/virtualization/windowscontainers/manage-docker/configure-docker-daemon>

QUESTION 5

You have a Nano Server named Nano1.

Which cmdlet should you use to identify whether the DNS Server role is installed on Nano1?

- A. Find-NanoServerPackage
- B. Get-Package
- C. Find-Package
- D. Get-Windows Optional Feature

Correct Answer: B

PS C:\> Get-Package

This command gets all packages that are installed on the local computer.
