**QUESTION 1**

Your company has a main office and a branch office. The two offices connect to each other by using a WAN link.

Your network contains an Active Directory forest named contoso.com. The forest contains a domain controller named DC1. All of the domain controllers are located in the main office.

You install a read-only domain controller (RODC) named RODC1 in the branch office.

You create a user account for a new user named User1. You add User1 to the Allowed RODC Password Replication Group. User1 starts work on Monday.

You are notified that the WAN link will be down for maintenance on Monday.

You need to ensure that User1 can log on in the branch office site on Monday.

Which command should you run? To answer, select the appropriate options in the answer area.

Hot Area:

**Answer Area**

clonepr
ldifde
repadmin
replmon

/prp
/replicate
/rodcpwdrepl
/syncall

rodcl.fabrikam.com dcl.fabrikam.com "cn=user1,ou=users,dc=fabrikam,DC=com"

Correct Answer:

**Answer Area**

clonepr
ldifde
repadmin
replmon

/prp
/replicate
/rodcpwdrepl
/syncall

rodcl.fabrikam.com dcl.fabrikam.com "cn=user1,ou=users,dc=fabrikam,DC=com"

The following example triggers replication of the passwords for the user account named JaneOh from the source domain controller named source-dc01 to all RODCs that have the name prefix dest-rod: repadmin /rodcpwdrepl dest-rod\*

source-dc01 cn=JaneOh,ou=execs,dc=contoso,dc=com

## QUESTION 2

You have a Windows Server 2016 Hyper-V failover cluster that contains two nodes named Node1 and Node2.

On Node1, you create a virtual machine named VM01 by using Hyper-V Manager.

You need to configure VM01 to move to Node2 automatically if Node1 becomes unavailable.

What should you do?

- A. From Failover Cluster Manager, run the Configure Role actions.
- B. From Windows PowerShell, run the Enable-VMReplication cmdlet.
- C. From Hyper-V Manager, click Node1, and then modify the Hyper-V settings.
- D. From Hyper-V Manager, click VM01, and click Enable Replication.

Correct Answer: A

## QUESTION 3

Your company has 10 offices. Each office has a local network that contains several Hyper-V hosts that run Windows Server 2016. All of the offices are connected by high speed, low latency WAN links.

You need to ensure that you can use QoS policies for Live Migration traffic between the offices.

Which component should you install?

- A. the Canary Network Diagnostics feature
- B. the Network Controller server role
- C. the Data Center Bridging feature
- D. the Multipath I/O feature
- E. the Routing role service

Correct Answer: C

NICs with a standard NIC team and two RDMA NICs

This configuration emphasizes the use of RDMA. To converge other workloads such as Live Migration, Cluster and Management on the same RDMA NICs, the NICs must also support Data Center Bridging (DCB). To provide high availability

to Storage, you can enable Microsoft Multipath I/O (MPIO).

With this configuration, you can apply all QoS features, including Bandwidth Management, Classification and Tagging, and PFC in the management operating system.

#### QUESTION 4

You have a server named Server1 that runs Windows Server 2016.

You plan to deploy Internet Information Services (US) in a Windows container.

You need to prepare Server1 for the planned deployment.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Select and Place:

**Actions**

- Install the Hyper-V server role.
- Install the Base Container Images.
- Install the Container feature.
- Install the Web Server role
- Install Docker.

**Answer Area**

- 
- 
- 

Correct Answer:

**Actions**

- Install the Hyper-V server role.
- 
- 
- Install the Web Server role
- 

**Answer Area**

1. Install the Container feature.
2. Install Docker.
3. Install the Base Container Images.

**QUESTION 5**

You have a RADIUS server named RADIUS1. RADIUS1 is configured to use an IP address of 172.23.100.101.

You add a wireless access point (wap) named WAP-Secure to your network. You configure WAP-Secure to use an IP address of 10.0.100.101.

You need to ensure that WAP-Secure can authenticate to RADIUS1 by using a shared secret key.

What command should you run? To answer, select the appropriate options in answer area.
