QUESTION 1

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one

correct solution, while others might not have a correct solution.

After you answer a question in this sections, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You deploy Windows Server 2016 to a server named Server1.

You need to ensure that you can run Windows Containers on Server1.

Solution: On Server1, you enable the Containers feature, and then you restart the server.

Does this meet the goal?

A. Yes

B. No

Correct Answer: B

QUESTION 2

Windows Firewall rules can be configured using PowerShell.

The "Set-NetFirewallProfile" cmdlet configures settings that apply to the per-profile configurations of the Windows Firewall with Advanced Security.

What is the default setting for the AllowInboundRules parameter when managing a GPO?

A. FALSE

B. NotConfigured

Correct Answer: B

The default setting when managing a computer is True. When managing a GPO, the default setting is NotConfigured. The NotConfigured value is only valid when configuring a Group Policy Object (GPO). This parameter removes the setting from the GPO, which results in the policy not changing the value on the computer when the policy is applied.

QUESTION 3

Note: Thb question Is part of a series of questions that present the same scenario. Each question In the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you willNOTbeabletorrturntoit.Asa result, these questions will not appear in the review screen.

Your network contains an Active Directory domain named contoso.com. The domain contains multiple Hyper-V hosts.

You need to deploy several critical line-of-business applications to the network to meet the following requirements:

*The resources of the applications must be isolated from the physical host

*Each application must be prevented from accessing the resources of the other applications.

*The configurations of the applications must be accessible only from the operating system that hosts the application.

Solution: You deploy one Windows container to host all of the applications.

Does this meet the goal?

A. Yes

B. No

Correct Answer: B

QUESTION 4

Your network contains an Active Directory domain named contoso.com. The domain contains a server named Server1 that runs Windows Server 2016.

You have an organizational unit (OU) named Administration that contains the computer account of Server1.

You import the Active Directory module to Server1.

You create a Group Policy object (GPO) named GPO1. You link GPO1 to the Administration OU. You need to log an event each time an Active Directory cmdlet executed successfully from Server1.

What should you do?

A. From Advanced Audit Policy in GPO1. configure auditing for other privilege use events.

B. Run the Add-NetEventProvider -Name "Microsoft-Active-Directory" -MatchAnyKeyword PowerShell command.

C. From Advanced Audit Policy in GPO1, configure auditing for directory service changes.

D. From Administrative Templates in GPO1, configure a Windows PowerShell policy.

Correct Answer: D

In the following GPO location, you can enable the setting "Turn on Module Logging" to record an event each time the PowerShell executes a cmdlet of a specificPowerShell module, for example "ActiveDirectory". "Computer Configuration\ \Administrative Templates\\Windows Components\\Windows PowerShell"

QUESTION 5

You have a server named Server1.

You need to configure PowerShell logging to capture dynamic code generation. The solution must minimize the number of events that are logged.

What should you configure?

- A. protected event logging
- B. script block logging
- C. module logging
- D. system-wide transcription

Correct Answer: C
