**QUESTION 1**

You have a domain-joined Apache Hadoop cluster in Azure HDInsight named hdcluster.

The Linux account for hdcluster is named Inxuser.

Your Active Directory account is named user1@fabrikam.com.

You need to run Hadoop commands from an SSH session.

Which credentials should you use? To answer, drag the appropriate credentials to the correct commands. Each credential may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view

content.

NOTE: Each correct selection is worth one point.

Select and Place:

**Credentials**

Inxuser@hdcluster

Inxuser@hdcluster-ssh.azurehdinsight.net

user1@fabrikam.com

user1@fabrikam.com.hdinsight.net

**Answer Area**

SSH:

Credential

Knit

Credential

Correct Answer:

**Credentials**

Inxuser@hdcluster-ssh.azurehdinsight.net

user1@fabrikam.com.hdinsight.net

**Answer Area**

SSH:

Inxuser@hdcluster

Knit

user1@fabrikam.com

**QUESTION 2**

You have a domain-joined Azure HDInsight cluster.

You plan to assign permissions to several support staff.

You need to assign roles to the staff so that they can perform specific tasks. The solution must use the principle of least privilege.

Which role should you assign for each task? To answer, drag the appropriate roles to the correct targets. Each role may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

Select and Place:

**Roles**

Cluster Administrator  
Cluster Operator  
Cluster User  
Service Administrator  
Service Operator

**Answer Area****Task**

Configure services  
View service-level alerts:  
View cluster configurations:

View cluster configurations:

**Roles**

Service Administrator  
Cluster User  
Cluster User

**QUESTION 3**

Note: This question is part of a series of questions that use the same or similar answer choices. An answer choice may be correct for more than one question in the series. Each question is independent of the other questions in this series.

Information and details provided in a question apply only to that question.

You need to deploy an HDInsight cluster that will have a custom Apache Ambari configuration. The cluster will be joined to a domain and must perform the following:

What should you do?

- A. Use an Azure PowerShell script to create and configure a premium HDInsight cluster. Specify Apache Hadoop as the cluster type and use Linux as the operating system.
- B. Use the Azure portal to create a standard HDInsight cluster. Specify Apache Spark as the cluster type and use Linux as the operating system.
- C. Use an Azure PowerShell script to create a standard HDInsight cluster. Specify Apache HBase as the cluster type and use Windows as the operating system.
- D. Use an Azure PowerShell script to create a standard HDInsight cluster. Specify Apache Storm as the cluster type and use Windows as the operating system.
- E. Use an Azure PowerShell script to create a premium HDInsight cluster. Specify Apache HBase as the cluster type and use Linux as the operating system.
- F. Use an Azure portal to create a standard HDInsight cluster. Specify Apache Interactive Hive as the cluster type and use Linux as the operating system.
- G. Use an Azure portal to create a standard HDInsight cluster. Specify Apache HBase as the cluster type and use Linux as the operating system.

Correct Answer: C

---

#### QUESTION 4

You have an Apache Hadoop cluster in Azure HDInsight that has a head node and three data nodes. You have a MapReduce job.

You receive a notification that a data node failed.

You need to identify which component cause the failure.

Which tool should you use?

- A. JobTracker
- B. TaskTracker
- C. ResourceManager
- D. ApplicationMaster

Correct Answer: C

---

## QUESTION 5

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this sections, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You are building a security tracking solution in Apache Kafka to parse security logs. The security logs record an entry each time a user attempts to access an application. Each log entry contains the IP address used to make the attempt and

the country from which the attempt originated.

You need to receive notifications when an IP address from outside of the United States is used to access the application.

Solution: Create a consumer and a broker. Create a file import process to send messages.

Run the producer.

Does this meet the goal?

A. Yes

B. No

Correct Answer: B
