Correct Answer:

Answer Area

```
CREATE TABLE dbo.UserActivity
(
    INDEX s_idx CLUSTERED (SessionId ASC)
    DISTRIBUTED BY [ ] (SessionId) INTO 2
    HASH
    RANGE
    ROUND ROBIN
)
EXTRACT SessionId Guid
, Timestamp DateTime
, Geocode string
, ResourcePath string
, ExecutionTime decimal
, HeaderLog string
FROM "/data/UserActivity.tsv"
USING [ ]
;
Extractors.Text()
Extractors.Tsv()
Outputters.Tsv()
```

QUESTION 2

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while

others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You are troubleshooting a slice in Microsoft Azure Data Factory for a dataset that has been in a waiting state for the last three days. The dataset should have been ready two days ago.

The dataset is being produced outside the scope of Azure Data Factory. The dataset is defined by using the following

JSON code.

```
{
  "name": "CustomerTable",
  "properties": {
    "type": "AzureBlob",
    "linkedServiceName": "MyLinkedService",
    "typeProperties": {
      "folderPath": "MyContainer/MySubFolder/",
      "format": {
        "type": "TextFormat",
        "columnDelimiter": ",",
        "rowDelimiter": ";"
      }
    },
    "external": false,
    "availability": {
      "frequency": "Hour",
      "interval": 1
    },
    "policy": {
    }
  }
}
```

You need to modify the JSON code to ensure that the dataset is marked as ready whenever there is data in the data store.

Solution: You change the external attribute to true.

Does this meet the goal?

A. Yes

B. No

Correct Answer: A

QUESTION 3

You are developing an application that uses Microsoft Azure Stream Analytics.

You have data structures that are defined dynamically.

You want to enable consistency between the logical methods used by stream processing and batch processing.

You need to ensure that the data can be integrated by using consistent data points.

What should you use to process the data?

- A. a vectorized Microsoft SQL Server Database Engine
- B. directed acyclic graph (DAG)
- C. Apache Spark queries that use updateStateByKey operators
- D. Apache Spark queries that use mapWithState operators

Correct Answer: D

QUESTION 4

You need to define an input dataset for a Microsoft Azure Data Factory pipeline. Which properties should you include when you define the dataset?

- A. name, type, typeProperties, and availability
- B. name, typeProperties, structure, and availability
- C. name, policy, structure, and external
- D. name, type, policy, and structure

Correct Answer: A

QUESTION 5

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while

others might not have a correct solution.

After you answer a question in this sections, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You are monitoring user queries to a Microsoft Azure SQL data warehouse that has six compute nodes.

You discover that compute node utilization is uneven. The rows_processed column from sys.dm_pdw_workers shows a significant variation in the number of rows being moved among the distributions for the same table for the same query.

You need to ensure that the load is distributed evenly across the compute nodes.

Solution: You change the table to use a column that is not skewed for hash distribution.

Does this meet the goal?

A. Yes

B. No

Correct Answer: A
