QUESTION 1

You are planning the deployment of Operations Manager. Operations Manager will be deployed before DPM. You plan to put the operational database on SQL03.

You need to identify which SQL Server servers must be used for the Operations Manager deployment.

Which server should host each database component for the Operations Manager deployment? To answer, drag the appropriate servers to the correct components. Each server may be used once, more than once, or not at all. You may need

to drag the split bar between panes or scroll to view content.

Select and Place:

Correct Answer:

QUESTION 2

You deploy System Center 2012 Operations Manager.

You create two unsealed management packs named MP1 and MP2.

You create an override for MP1.

You create a group in MP2.

You need to apply the override for MP1 to the group in MP2.

What should you do before you apply the override?

A. Create a new class in MP2.

B. Seal MP1.

C. Seal MP2.

D. Create a new class in MP1.

Correct Answer: C

When you create a group, you save it to an unsealed management pack. However, an element in an unsealed management pack, such as a group, cannot reference an element in a different unsealed management pack, such as an override

or a view.

If you are going to use a group to target an override or scope a view, you must either save the group to the same unsealed management pack as the override or view, or you must seal the management pack that contains the group. If you

save the group to the same unsealed management pack as the override or view, you can only use that group for overrides and views that are also contained in that unsealed management pack.

If you seal the management pack that contains the group, you can reference that group from other unsealed management packs.

However, you cannot easily change any group settings in the sealed management pack or add new groups to the sealed management pack.

QUESTION 3

You have a System Center 2012 R2 infrastructure that has Operations Manager installed.

Your company is testing a custom application named App1. App1 is deployed to a test server named Server1. Server1 runs Windows Server 2012 R2.
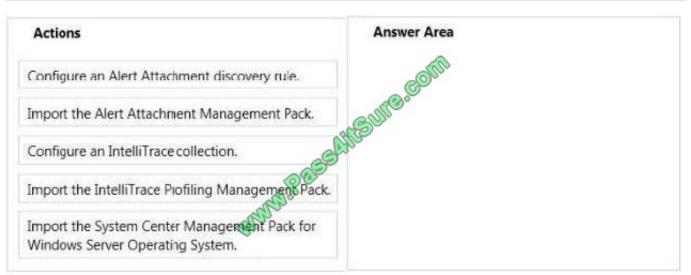

You push the Operations Manager agent to Server1 and you start to receive alerts from Server1.

You need to give a team of developers historical traces of App1. The developers will store the traces in Team Foundation Server (TFS).
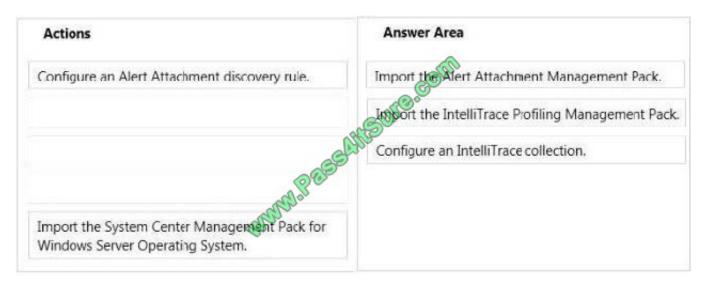

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Select and Place:

Actions	Answer Area
Configure an Alert Attachment discovery rule.	
Import the Alert Attachment Management Pack.	
Configure an IntelliTrace collection.	
Import the IntelliTrace Profiling Management Pack.	
Import the System Center Management Pack for Windows Server Operating System.	

Correct Answer:

Actions	Answer Area
Configure an Alert Attachment discovery rule.	Import the Alert Attachment Management Pack.
	Import the IntelliTrace Profiling Management Pack.
	Configure an IntelliTrace collection.
Import the System Center Management Pack for Windows Server Operating System.	

QUESTION 4

Your company has a private cloud that is managed by using a System Center 2012 infrastructure. The network contains 50 virtual machines that run Windows 7. Each virtual machine has an application named Appl.exe installed. A new version of Appl.exe is released. You need to identify which virtual machines have the outdated version of App1.exe installed. What should you do?

A. From Operations Manager, create a monitor.

B. From Configuration Manager, deploy a Desired Configuration Management baseline.

C. From Service Manager, create a Virtual Machine Manager (VMM) connector.

D. From Virtual Machine Manager (VMM), deploy a service template.

Correct Answer: B

QUESTION 5

Your company has three datacenters located in New York, Los Angeles and Paris.

You deploy a System Center 2012 Virtual Machine Manager (VMM) infrastructure. The VMM infrastructure contains 2,000 virtual machines deployed on 200 Hyper-V hosts.

The network contains a server named DPMI that has System Center 2012 Data Protection Manager (DPM) installed.

You need to recommend a solution for the infrastructure to meet the following requirements:

Automatically backup and restore virtual machines by using workflows. Automatically backup and restore system states by using workflows.

What should you include in the recommendation? (Each correct answer presents part of the solution. Choose two.)

A. Deploy System Center 2012 Orchestrator.

B. Install the Integration Pack for System Center Virtual Machine Manager (VMM).

C. Install the Integration Pack for System Center Data Protection Manager (DPM).

D. Deploy System Center 2012 Operations Manager.

E. Deploy System Center 2012 Service Manager.

Correct Answer: AC
