QUESTION 1

Your company has a System Center 2012 infrastructure. The infrastructure contains the App Controller and Virtual Machine Manager (VMM) roles.

You deploy a service named SRV1 to the production environment in the public cloud. You also deploy SRV1 to a staging environment in the public cloud.

You perform upgrades to SRV1 in the staging environment.

You need to apply the upgrades from the staging environment to the production environment.

What should you do?

A. From the VMM Administrator Console, create a new virtual machine template.

B. From the App Controller portal, perform an environment swap upgrade.

C. From the VMM Administrator Console, create a new service.

D. From the App Controller portal, import an SSL certificate.

E. From the VMM Administrator Console, create a new service template.

Correct Answer: B

http://technet.microsoft.com/en-us/library/hh221342.aspx Public cloud services can be upgraded in one of two ways: an environment swap or an in-place upgrade. An environment swap places the staging environment into the production environment. As the swap occurs, the existing production environment is moved into the staging environment. An in-place upgrade replaces the existing binaries and settings with new binaries and settings.

QUESTION 2

You have a System Center 2012 Virtual Machine Manager (VMIM) infrastructure that contains a server named Server1. Server1 hosts the VMM library.

You add a server named Server2 to the network. You install the Windows Deployment Services (WDS) server role on Server2. You have the Install.wim file from the Windows Server 20008 R2 Service Pack 1 (SP1) installation media.

You need to install Hyper-V hosts by using the bare-metal installation method.

What should you do first?

A. Convert Install.wim to a .vmc file.

B. Convert Install.wim to a .vhd file.

C. Add Install.wim to the VMM library.

D. Add Install.wim to the Install Images Container.

Correct Answer: B

For the bare metal deployment, you need an operating system and one of the first steps to take is to create a bootable VHD for that operating system. This is done by using the WIM2VHD tool to take the install.wim file from your Windows Server 2008 R2 SP1 installation media and convert it.

QUESTION 3

You need to recommend which actions must be performed to integrate the private cloud components. The solution must meet the private cloud integration requirements.

From which System Center 2012 component should you perform each action? (To answer, drag the appropriate components to the correct actions. Each component may be used once, more than once, or not at all. You may need to drag the

split bar between panes or scroll to view content.)

Select and Place:

Correct Answer:

Components	Answer Area	
	Configure the Alert Sync internal connector.	Operations Manager
	Enable the connection to Operations Manager.	Virtual Machine Manager
	Install the Service Manager integration pack, the Operations Manager integration pack, and the Virtual Machine Manager integration pack.	Orchestrator Runbook Designer
	Create an Operations Manager alert connector, an Operations Manager configuration item (CI) connector, a VMM connector, and an Orchestrator connector.	Service Manager

QUESTION 4

You need to implement the resiliency requirements for the Hyper-V hosts.

Which four cmdlets should you run in sequence? To answer, move the appropriate cmdlets from the list of cmdlets to the answer area and arrange them in the correct order.

Select and Place:

Cmdlets	Answer Area
New-VMSwitch	
New-NetLbfoTeam	
Connect-VMNetworkAdapter	
Add-VMNetworkAdapter	
Set-VMNetworkAdapterVlan	

Correct Answer:

Cmdlets		Answer Area	
		New-NetLbfoTeam	
		New-VMSwitch	
		Connect-VMNetworkAdapter	
Add-VMNetworkAdapter		Set-VMNetworkAdapterVlan	

QUESTION 5

You need to recommend a configuration for the VMM network fabric. The solution must meet the requirements for managing services in the private cloud. What should you include in the recommendation?

A. Disable the Logical network matching setting.

B. Disable the Automatic creation of virtual networks setting.

C. Create a virtual IP (VIP) template.

D. Create a hardware load balancer.

Correct Answer: C
