QUESTION 1

You plan to deploy three Remote Desktop Gateway (RD Gateway) servers.

You need to recommend a solution to ensure that if a single RD Gateway server fails, users can continue to access resources through the other RD Gateway servers.

What should you recommend?

More than one answer choice may achieve the goal. Select the BEST answer.

A. Network Load Balancing (NLB)

B. Hyper-V replicas

C. Failover Clustering

D. DNS round robin

Correct Answer: A

QUESTION 2

Your network contains 100 virtual desktops that are hosted on a Remote Desktop Services (RD5) collection. All RDS servers run Windows Server 2012. You need to recommend changes to the Remote Desktop environment to meet the following requirements:

Minimize the amount of bandwidth used by Remote Desktop sessions. Minimize the amount of hardware resources used by the RDS servers.

What should you recommend changing?

More than one answer choice may achieve the goal. Select the BEST answer.

A. The screen resolution settings

B. The Configure RemoteFx adaptative graphics Group Policy object (GPO) setting

C. The Configure RemoteFx lossless graphics data Group Policy object (GPO) setting

D. The Configure compression for RemoteFx data Group Policy object (GPO) setting

Correct Answer: B

A group policy that limits screen resolution settings will save the most bandwidth / and memory.

GPO (C) Configure RemoteFX lossless graphics data does not exist. GPO (D) Configuring the RDP compression will increase performance, but has a tradeoff - though there is a balanced setting, it will burn more memory, maybe even cpu

cycles.

QUESTION 3

You virtualize App5 and App6.

You need to ensure that App5 and App6 meet the application requirements.

What should you do?

A. From the Application Virtualization Management Console, add a connection group.

B. From the Application Virtualization Management Console, upgrade the packages.

C. From the Microsoft Application Virtualization Sequencer, modify the Properties settings of App5 and App6.

D. From the Microsoft Application Virtualization Sequencer, modify the Deployment settings of App5 and App6.

Correct Answer: A

http://blogs.technet.com/b/appv/archive/2012/11/06/deploying-connectiongroups-app-v-5-0.aspx

QUESTION 4

You plan to deploy virtual desktops to the network. All of the virtual desktops will be based on a virtual machine template named Templatel.vhd. Templatel.vhd contains an application named Appl.

You plan to deploy an update to App1 named Applupdate.msp.

You need to recommend the appropriate deployment method to apply Applupdate.msp to Templatel.vhd. You want to achieve this goal by using the minimum amount of administrative effort.

Which deployment method should you recommend?

A. Run dism.exe and specify the /mount-w\rr\ parameter and the /add-package parameter.

B. Start a virtual machine that uses Templatel.vhd. Install Applupdate.msp, and then generalize the virtual machine,

C. Mount Templatel.vhd, and then copy Applupdate.msp to the %Systemroot%\AppPatch folder.

D. Run diskpart.exe and specify the attach parameter. Run msiexec.exe and specify the /update parameter.

Correct Answer: B

QUESTION 5

Your network contains an Active Directory domain named contoso.com. The domain contains 500 client computers that run Windows 8.

You plan to deploy two applications named App1 and App2 to the client computers.

App2 is updated by the application manufacturer every month. You need to recommend an application distribution strategy for the applications.

The solution must meet the following requirements:

The executable files of App1 must NOT be stored on the client computers. Users who run App2 must run the latest version of App2 only.

What should you recommend using to deploy the applications?

A. RemoteApp programs

B. Microsoft Enterprise Desktop Virtualization (MED-V)

C. Microsoft Application Virtualization (App-V) in standalone mode

D. A Group Policy software distribution package assigned to the computer accounts

Correct Answer: A

Note:

*

RemoteApp enables you to make programs that are accessed remotely through Remote Desktop Services appear as if they are running on the end user\\'s local computer. These programs are referred to as RemoteApp programs. Instead of being presented to the user in the desktop of the Remote Desktop Session Host (RD Session Host) server, the RemoteApp program is integrated with the client\\'s desktop. The RemoteApp program runs in its own resizable window,

can be dragged between multiple monitors, and has its own entry in the taskbar. If a user is running more than one RemoteApp program on the same RD Session Host server, the RemoteApp program will share the same Remote Desktop Services session.

Incorrect: Not B:

*

The App-V clients may also be used in a "stand-alone" mode without either of the server infrastructures. In this case, the sequenced packages are delivered using an external technique, such as an Electronic Software Delivery system or manual deployment.

*

Microsoft Application Virtualization (MS App-V) platform allows applications to be deployed ("streamed") in real-time to any client from a virtual application server. It removes the need for traditional local installation of the applications, although a standalone deployment method is also supported. With a streaming-based implementation, the App-V client needs to be installed on the client machines and application data that is stored on the virtual application server is installed (streamed) to the client cache on demand when it is first used, or pre-installed in a local cache.
