QUESTION 1

Your network contains an Active Directory domain named contoso.com. The domain contains a Windows Server Update Services (WSUS) server.

The domain has Microsoft System Center 2012 Configuration Manager and Microsoft System Center 2012 Virtual Machine Manager (VMM) deployed.

Users in the finance department connect to a managed pooled virtual desktop collection. You need to recommend a strategy to apply operating system updates to the virtual desktops used by the finance users.

What should you recommend?

More than one answer choice may achieve the goal. Select the BEST answer.

A. Manually update a base image and recreate the collection.

B. From Configuration Manager, configure software updates.

C. Configure an intranet Microsoft update service location by using Group Policy.

D. From VMM, perform Update Remediation.

Correct Answer: A

Configuring Software Updates in Configuration Manager

Software update point-based installation	• Can use your existing software updates infrastructure to manage the client software. • Can automatically install the client software on new computers if Windows Server Update Services (WSUS) and Group Policy settings in Active Directory Domain Services are configured correctly. • Does not require computers to be discovered before the client can be installed. • Computers can read client installation properties that have been published to Active Directory Domain Services. • Will reinstall the client software if it is removed. • Does not require you to configure and maintain an installation account for the intended client computer r.

QUESTION 2

Your network contains an Active Directory domain named contoso.com. The domain contains a server named Server1 that has Microsoft System Center 2012 Configuration Manager installed. All client computers run Windows 7.

You plan to deploy Windows 8 to all of the client computers.

You discover that the Client Replace Task Sequence task sequence is unavailable from the Configuration Manager console.

You need to ensure that the Client Replace Task Sequence task sequence is available from Configuration Manager.

What should you install on Server1?

A. The Windows Automated Installation Kit (Windows AIK)

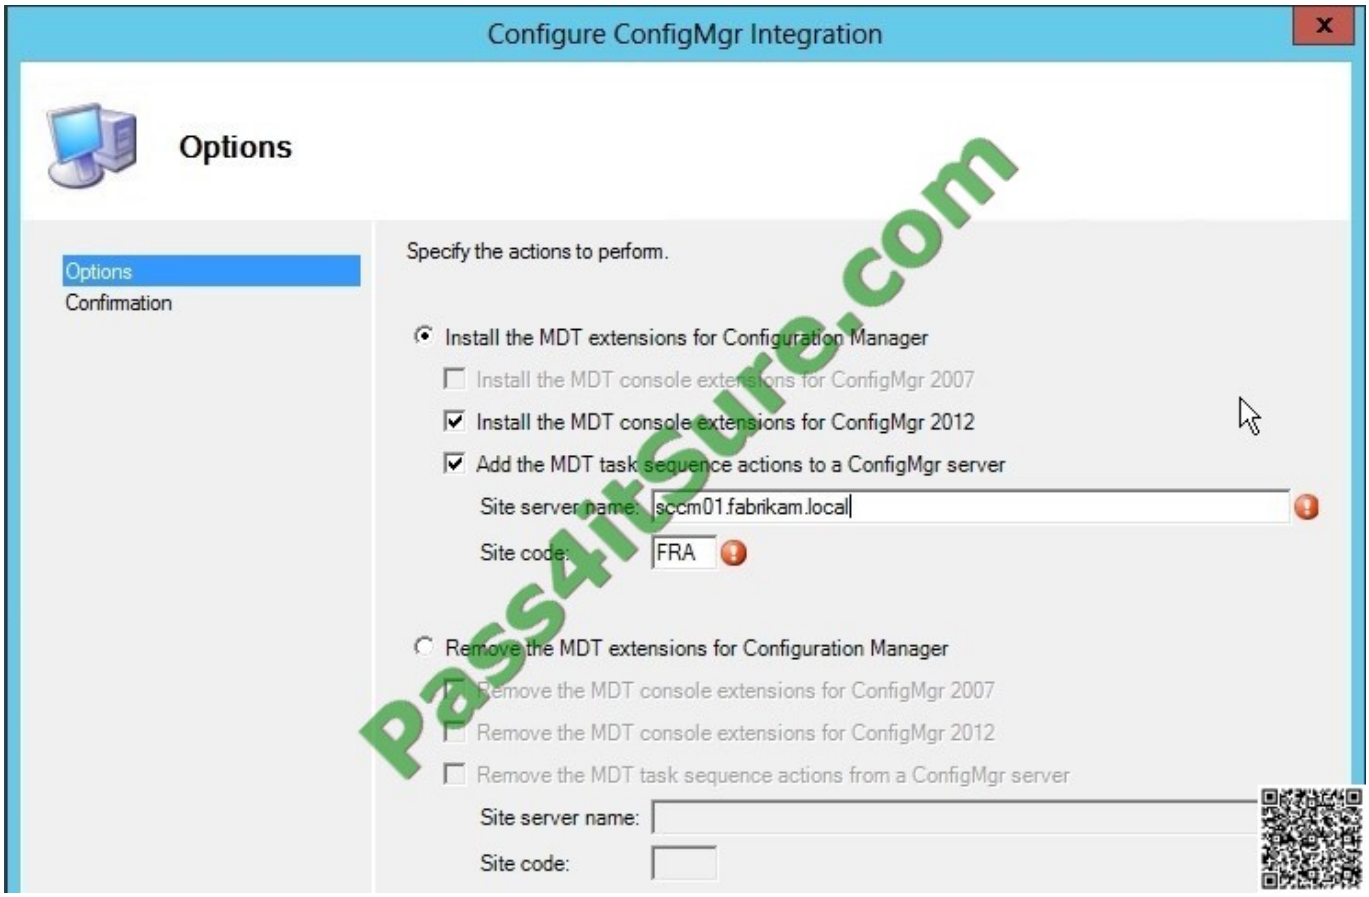
B. The System Center 2012 Configuration Manager Toolkit

C. The Windows Assessment and Deployment Kit (Windows ADK)

D. Microsoft Deployment Toolkit (MDT) 2012

Correct Answer: D

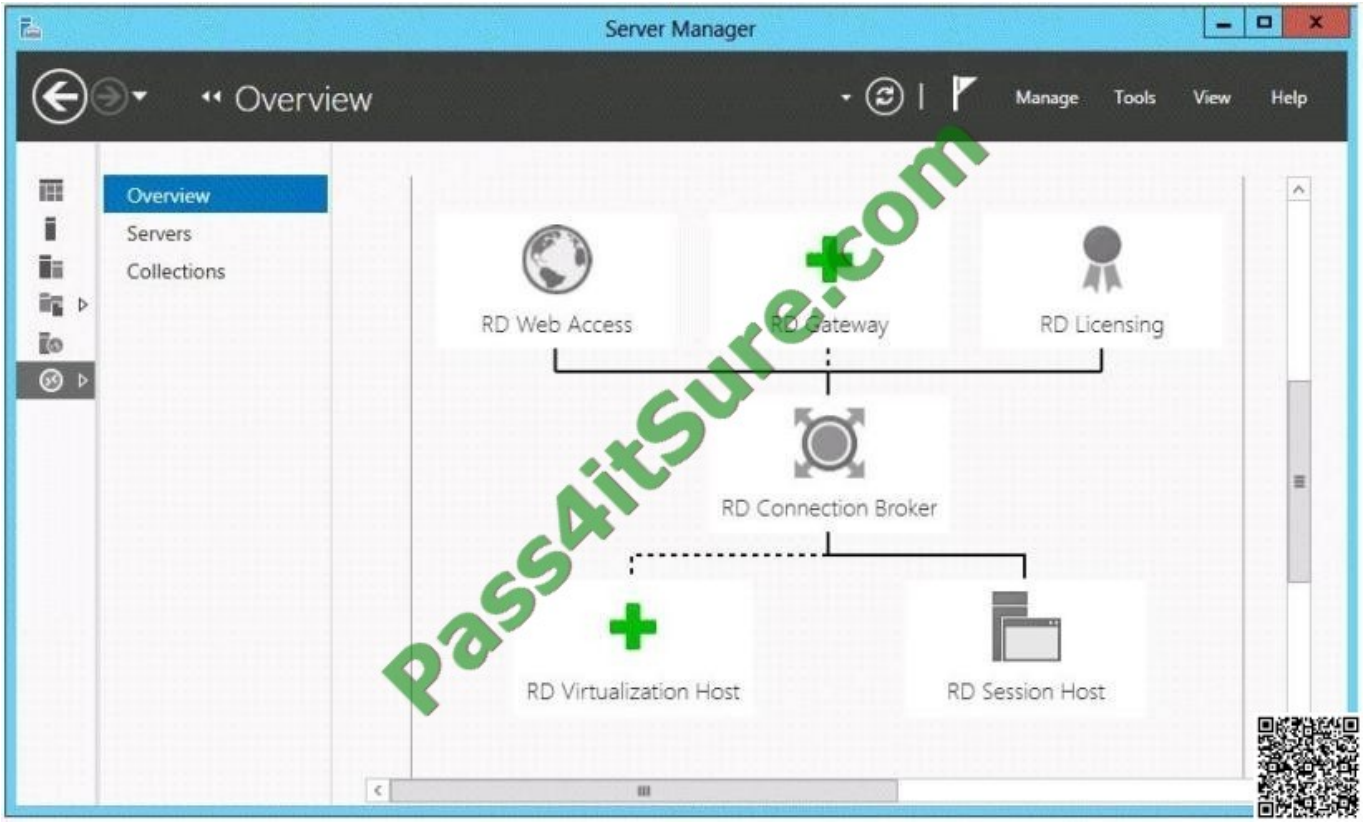
The Client Replace Task Sequence will only be available if we integrate MDT in SCCM:



QUESTION 3

You have a server named Server1.

You open Server Manager on Server1 as shown in the exhibit. (Click the Exhibit button.)



You need to ensure that you can publish RemoteApp programs. What should you do?

A. Create a Remote Desktop connection authorization policy (RD CAP).

B. Install the Remote Desktop Gateway role service.

C. Create a collection.

D. Install the Remote Desktop Virtualization Host role service.

Correct Answer: C

A RD CAP isn\\'t right as this isn\\'t a RD Gateway scenario B RD Gateway doesn\\'t appear to be in play her

C RemoteApp programs are published to either a session collection or virtual desktop collection using

Server Manager.

D RD Virtual Host implies we are using a VDI pool and that doesn\\'t appear to be the case with a RemoteApp.

Test Lab Guide: Remote Desktop Services Publishing http://technet.microsoft.com/en-us/library/hh831442.aspx

QUESTION 4

Your network contains an Active Directory domain named contoso.com. The domain contains a server named Server1 that has the Windows Deployment Services server role installed.

Server1 hosts a single install image of Windows 8 (x64) and 200 driver groups. Each driver group has a different set of filters configured.

You are preparing to deploy windows 8 to a new hardware model.

You need to recommend a solution to identify which drivers from the existing driver groups will be deployed to the new hardware model.

What should you do first?

A. Create a prestaged device.

B. Create a capture image.

C. Install Microsoft Deployment Toolkit (MDT) 2012.

D. Install the Microsoft Assessment and Planning (MAP) Toolkit.

Correct Answer: A

The Expected Deployment Results Wizard is a new feature in Windows 2012 Server WDS,which allows administrators to view deployment information - such as the set of matching driver groups that would be sent to a prestaged device. It enables administrators to model the process of deploying a computer and seeing what boot images, install images, driver groups the computer will be offered from the server. It is designed to help administrators efficiently test configuration changes to their servers and see how they impact deployments to all or specific (prestaged) computers. The tool is especially valuable when used to test some of the advanced configuration options afforded by the WDS infrastructure for custom deployments.

QUESTION 5

Your network contains an Active Directory domain named contoso.com. The network contains a Remote Desktop Services (RDS) infrastructure. The RDS infrastructure contains five servers that run Windows Server 2012. All client computers

run Windows 8.

You need to recommend a software delivery method to meet the following requirements:

Minimize the amount of hardware resources used on the client computers. Ensure that applications are launched by using document invocation.

What should you recommend?

A. From an RDS server, publish RemoteApp programs. From the client computers, create a Remote Desktop connection.

B. From a Microsoft Application Virtualization (App-V) publishing server, publish App-V packages, and then modify the list of file type associations.

C. From an RDS server, publish RemoteApp programs. From the client computers, create a new connection URL.

D. From a Group Policy, assign applications to all of the client computers, and then run gpupdate.exe /force on each client computer.

Correct Answer: C
