QUESTION 1

You need to start collecting media quality data generated by Lync during Proof of Concept (POC) testing.

Which three steps should you perform in sequence? (To answer, move the appropriate three actions from the list of actions to the answer area and arrange them in the correct order.)

Select and Place:

- Run the **Set-CsCdrConfiguration -Identity "global" -EnableCDR \$True** PowerShell cmdlet.
- Run the **Set-CsHealthMonitoringConfiguration -Identity "global" -Force -Filter "*:alerts"** PowerShell cmdlet.
- Modify the topology.
- Run the **Set-CsQoEConfiguration -Identity "global" -EnableQoE \$True** PowerShell cmdlet.
- Publish the topology.

www.Pass4itSure.com

Correct Answer:

Run the **Set-CsCdrConfiguration -Identity "global" -EnableCDR \$True** PowerShell cmdlet.

Run the **Set-CsHealthMonitoringConfiguration -Identity "global" -Force -Filter "*:alerts"** PowerShell cmdlet.

Modify the topology.

Publish the topology.

Run the **Set-CsQoEConfiguration -Identity "global" -EnableQoE \$True** PowerShell cmdlet.

Note:

* Set-CsQoEConfiguration

Modifies an existing collection of QoE (Quality of Experience) settings.

QoE metrics track the quality of audio and video calls made in your organization, including such things as the number of network packets lost, background noise, and the amount of "jitter" (differences in packet delay). These metrics are stored

in a database apart from other data (such as call detail records), which allows you to enable and disable QoE independent of other data recording. Use this cmdlet to modify settings that configure QoE at the global or site level.

QoE is part of the Monitoring Server role; therefore Monitoring Server must be deployed on your Lync Server installation before QoE recording takes effect or any QoE data can be collected.

Incorrect:

* Set-CSHealthMonitoringConfiguration

Modifies an existing collection of health monitoring configuration settings. These settings enable administrators to run quality assurance tests without having to supply the user names and passwords for the required test accounts.

* Set-CsCdrConfiguration

Modifies an existing collection of call detail recording (CDR) settings. CDR enables you to track usage of such things as peer-to-peer instant messaging sessions, Voice over Internet Protocol (VoIP) phone calls, and conferencing calls. This usage data includes information about who called whom, when they called, and how long they talked.

**QUESTION 2**

You need to manage voice traffic for the call centers. What should you do?

- A. Define Call Admission Control (CAC) policies.
- B. Modify the Lync Client policy for the call center users.
- C. Modify the Lync Global Conferencing policy.
- D. Define all audio traffic as non-real-time traffic.

Correct Answer: C

QUESTION 3

You need to determine the minimum Asymmetric Digital Subscriber Line (ADSL) network service requirements for the branch locations. Which bandwidth should you choose?

- A. 1 Mbps/512 Kbps
- B. 5 Mbps/1 Mbps
- C. 5 Mbps/1.5 Mbps
- D. 10 Mbps/3 Mbps

Correct Answer: C

/ Branches should be able to support up to 24 simultaneous peer-to-peer (P2P) calls between sites / Fabrikam uses RTAudio Wideband (57Kbps) $24 \times 57 = 1368$. For redundancy, the backup line must be at least 1368kpbs, ie: 1.5Mbps.

QUESTION 4

You need to configure the Lync 2013 Bandwidth Calculator to provide a visual alert when the volume of Lync traffic at Contoso exceeds the maximum allowed threshold. What should you do?

- A. For the Contoso office in Vancouver, update the value for WAN link BW allocated for RTC traffic to 5 Mbps.
- B. In the global definitions, update the value of the Flag in Red parameter to 50%.
- C. For the Contoso office in Seattle, update the value for WAN link BW allocated for RTC traffic to 5 Mbps.
- D. In the global definitions, update the value of the Flag in Red parameter to 25%.

Correct Answer: D

/ Volume of Lync traffic does not exceed 25 percent of the WAN bandwidth

**QUESTION 5**

You need to configure the monitoring computers to support the deployment of watcher nodes to meet the technical requirements. What should you do?

- A. Deploy the Lync 2013 watcher nodes on the same computers as the Lync 2010 watcher nodes.
- B. Deploy Lync 2013 watcher nodes and remove the Lync 2010 watcher nodes.
- C. Run the Install-CsWatcherCollocate cmdlet on each computer that is running the Lync 2010 watcher nodes.
- D. Run the Install-CsLegacyWatcherNode cmdlet on each computer that is running the Lync 2010 watcher nodes.

Correct Answer: B

A legacy Microsoft Lync Server 2010 watcher node cannot be collocated on the same machine with a Lync Server 2013 watcher node. This is because the core system files for Lync Server 2010 and Lync Server 2013 cannot be installed on the same computer.

However, Lync Server 2013 watcher nodes can simultaneously monitor both Lync Server 2013 and Lync Server 2010. The Default synthetic transactions are supported on both product versions.
