QUESTION 1

Which of the following is used to display a trend based on adjacent data in a clear and compact graphical representation by taking up a small amount of space?

- A. Trendline
- B. Line chart
- C. Sparkline
- D. Backstage view

Correct Answer: C

A sparkline is defined as a tiny chart in the background of a cell. Unlike charts on an Excel Worksheet, sparklines are not objects. It is used because data presented in a row or column is useful, but patterns can be hard to spot at a glance. It is used to display a trend based on adjacent data in a clear and compact graphical representation by taking up a small amount of space. The benefit of using the sparklines is that these can be printed when a user prints a worksheet that contains them. This feature is not available in charts. Answer option D is incorrect. The Microsoft Office Backstage view is used to replace the traditional file menu with a new approach that uses In and Out features for efficiency. The improved Ribbon enables users to access their preferred commands rapidly and create custom tabs to personalize the way they work. Answer option A is incorrect. A trendline is defined in Excel 2013. It is a data visualization tool to display the trend of a particular data range. It is used to show the slope of data points in a chart. There are various types of trendlines, such as linear trendlines, exponential trendlines, and linear forecast trendlines. Answer option B is incorrect. Excel provides a column chart facility to display data that is arranged in columns or rows on a worksheet. Line charts are used to display continuous data over time, set against a common scale. In a line chart, category data is distributed along the horizontal axis, and all value data is distributed along the vertical axis. Line charts are ideal for showing trends in data at equal intervals.

A line chart should be used where category labels are text, and are representing evenly spaced Values such as months, quarters, or years.

QUESTION 2

You work as an Office Assistant for Blue Well Inc. The company has a Windows-based network. You want to filter data in a PivotTable report without opening drop-down lists to find the items that you want to filter. For this purpose, you are using a slicer. After filtering the data, you want to disconnect the slicer. You have clicked anywhere in the PivotTable

report. Which of the following steps will you take next to accomplish the task?

Each correct answer represents a part of the solution. Choose all that apply.

- A. Clear the check box of any PivotTable fields for which you want to disconnect a slicer.
- B. Right-click the slicer, and then click Remove .
- C. Click the Insert Slicer arrow, and then click Slicer Connections on the Options tab in the Sort and Filter group.
- D. Click the slicer, and then press Delete.

Correct Answer: AC

QUESTION 3

You work as a Project Manager for Blue Well Inc. The company has a Windows-based network. You want to rename a worksheet as Important.

Which of the following steps will you take to accomplish the task?

Each correct answer represents a part of the solution. Choose all that apply.

- A. Click the Insert tab and open the name sheet.
- B. Enter the name and click the OK button.
- C. Right-click on the Sheet tab and select the Rename option.
- D. Delete the old name, type the new name, and then click OK.

Correct Answer: BC

QUESTION 4

You work as an Office Assistant for Blue Well Inc. The company has a Windows-based network. Some employees have changed some data in the worksheet of the company. You want to identify changes that were made to the data in the workbook and then take a decision whether to accept or reject those changes. For this purpose, it is required to access and use the stored change history.

Which of the following will you use to accomplish the task?

Each correct answer represents a complete solution. Choose all that apply.

- A. History tracking
- B. Onscreen highlighting
- C. Slicer-enabled highlighting
- D. Reviewing of changes

Correct Answer: ABD

The following ways are provided by Excel to access and use the stored change history:

1.

Onscreen highlighting: It is used when a workbook does not contain many changes and a user wants to see all changes at a glance.

2.

History tracking: It is used when a workbook has many changes and a user wants to investigate what occurred in a series of changes.

3.

Reviewing of changes: It is used when a user is evaluating comments from other users. Answer option C is incorrect. This is an invalid answer option.

QUESTION 5

You work as an Office Assistant for Media Perfect Inc. You have created a spreadsheet in Excel 2013 and shared it with the other employees of the company. You want to select password protection and select options to prevent other employees from changing, moving, and deleting important data.

Which of the following options will you choose to accomplish the task?

A. Mark as Final

B. Protect Current Sheet

C. Encrypt with Password

D. Protect Workbook Structure

Correct Answer: D

The various Protect Workbook options are as follows:

1.

Mark as Final: This option is used to make the document read-only. When a spreadsheet is marked as final, various options such as typing, editing commands, and proofing marks are disabled or turned off and the spreadsheet becomes read-only. This command helps a user to communicate that he is sharing a completed version of a spreadsheet. This command also prevents reviewers or readers from making inadvertent modifications to the spreadsheet.

2.

Encrypt with Password: When a user selects the Encrypt with Password option, the Encrypt Document dialog box appears. In the Password box, it is required to specify a password. Microsoft is not able to retrieve lost or forgotten passwords, so it is necessary for a user to keep a list of passwords and corresponding file names in a safe place.

3.

Protect Current Sheet: This option is used to select password protection and permit or prohibit other users to select, format, insert, delete, sort, or edit areas of the spreadsheet. This option protects the worksheet and locked cells.

4.

Protect Workbook Structure: This option is used to select password protection and select options to prevent users from changing, moving, and deleting important data. This feature enables a user to protect the structure of the worksheet.

5.

Restrict Permission by People: This option works on the basis of Window Rights Management to restrict permissions. A user is required to use a Windows Live ID or a Microsoft Windows account to restrict permissions. These permissions can be applied via a template that is used by the organization in which the user is working. These permissions can also be added by clicking Restrict Access.

6.

Add a Digital Signature: This option is used to add a visible or invisible digital signature.

It

authenticates digital information such as documents, e-mail messages, and macros by using computer cryptography. These signatures are created by specifying a signature or by using an image of a signature for establishing authenticity, integrity, and non-repudiation.
