**QUESTION 1**

An application must retrieve a large amount of data in the background. The application must also process other tasks at the same time that the background task executes. Which data access method should the application use?

- A. Indexed
- B. Synchronous
- C. Asynchronous
- D. Random

Correct Answer: B

QUESTION 2

When is the Load event of a Windows form fired?

- A. Every time the form is restored from the minimized state
- B. The first time the form is displayed
- C. Every time the form is displayed
- D. The first time an instance of the form is created

Correct Answer: B

QUESTION 3

You add an installer to a Windows Services application. Which class provides the installation functionality?

- A. GroupInstaller
- B. ProjectInstaller
- C. OutputInstaller
- D. ServiceGroupInstaller

Correct Answer: B

QUESTION 4

An application uses the Debug.Write() method to output debugging messages. What will happen when you attempt to compile the application in Release mode?

- A. All Debug.Write() lines will continue to output messages to a log file.

- B. The compiler will ignore all lines that contain a call to `Debug.Write()`.
- C. The compiler will display an error for each call to `Debug.Write()`.
- D. All `Debug.Write()` lines will continue to output messages to a hidden window.

Correct Answer: B

QUESTION 5

A Windows form contains two buttons. When the buttons are clicked, both buttons must execute `CodeBlockA`. You need to ensure that you can add new buttons to the form that will execute `CodeBlockA` when they are clicked. What should you do?

- A. Create an interface that all buttons implement.
- B. Create the new buttons by using Copy and Paste in the form designer.
- C. Create a base class that all buttons inherit from.
- D. Create a shared Click event handler for all buttons.

Correct Answer: D
