QUESTION 1

This question requires that you evaluate the underlined text to determine if it is correct.

Computer worms are different from other types of malware or spyware because they propagate only when the infected files are copied.

Review the underlined text. If it makes the statement correct, select "No change is needed". If the statement is incorrect, select the answer choice that makes the statement correct.

- A. No change is needed
- B. masquerade as valid files or utility
- C. are embedded as macros in data files
- D. can self-replicate

Correct Answer: D

QUESTION 2

Match each type of malware to its definition.

To answer, drag the appropriate malware type from the column on the left to the definition on the right. Each malware type may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view

content.

NOTE: Each correct selection is worth one point.

Select and Place:

Malware type	Answer Area
Virus	tracks a user's computer usage
Spyware	sends copies of itself to other machines
Worm	spreads when an executable is initiated by a user

Correct Answer:

**Malware type**

Answer Area

tracks a user's computer usage

Spyware

sends copies of itself to other machines

Worm

spreads when an executable is initiated by a user

Virus

QUESTION 3

Your company needs a service that eliminates a single point of failure on any provisioned service.

Which feature can Microsoft Azure offer to lower the probability of a failure that disrupts business operations?

- A. HDInsight
- B. scalability
- C. high availability
- D. backup

Correct Answer: C

A highly available cloud application implements strategies to absorb the outage of the dependencies like the managed services offered by the cloud platform. Despite possible failures of the cloud platform's capabilities, this approach permits

the application to continue to exhibit the expected functional and non-functional systemic characteristics.

Incorrect answers:

Not A: Azure HDInsight deploys and provisions Apache Hadoop clusters in the cloud, providing a software framework designed to manage, analyze, and report on big data with high reliability and availability.

QUESTION 4

When you copy a file from one NTFS file system partition to a different NTFS partition, what happens to the file permissions of the copied file?

- A. They are the combined permissions of the original file and destination folder
- B. They inherit the permissions of the destination folder

- C. They remain the same as the original
- D. They are removed, and only the creator is given full control

Correct Answer: B

When you copy a protected file to a folder on the same, or a different volume, it inherits the permissions of the target directory.

QUESTION 5

Your network is configured as an Active Directory Domain Services (AD DS) domain. The company has an Azure AD premium subscription. You need to configure file access and storage to meet the following requirements: Users can access files from any location with any managed devices without connecting to the corporate network.

Users can access local copies of files when they are not connected to the Internet.

Files will sync automatically when connected to the Internet.

What should you configure?

- A. Work Folders
- B. Offline folders
- C. Company Portal
- D. RemoteApp

Correct Answer: A
