-  **365 Days** Free Update
-  **800,000+** Satisfied Customers

**QUESTION 1**

Which feature protects computers from running untrusted applications?

- A. Evidence-based security
- B. Role-based security
- C. Cryptography
- D. Code Access security

Correct Answer: B

Role-Based Security Business applications often provide access to data or resources based on credentials supplied by the user. Typically, such applications check the role of a user and provide access to resources based on that role. The common language runtime provides support for role-based authorization based on a Windows account or a custom identity.

QUESTION 2

What is the characteristic of a delegate?

- A. A type-safe function pointer
- B. An object that raises an event
- C. A tightly coupled event
- D. A property function that includes optional parameters

Correct Answer: A

The .NET Framework defines a special type (Delegate) that provides the functionality of a function pointer.

A delegate is a class that can hold a reference to a method. Unlike other classes, a delegate class has a signature, and it can hold references only to methods that match its signature. A delegate is thus equivalent to a type-safe function pointer or a callback.

QUESTION 3

Which two classes in the .NET Framework allow you to delete a file? (Each correct answer presents a complete solution. Choose two.)

- A. System.IO.FileInfo
- B. System.IO.FileStream
- C. System.IO.Stream
- D. System.IO.Path

E. System.IO.File

Correct Answer: AE

A: System.IO.FileInfo provides properties and instance methods for the creation, copying, deletion, moving, and opening of files, and aids in the creation of FileStream objects.

E: System.IO.File provides static methods for the creation, copying, deletion, moving, and opening of files, and aids in the creation of FileStream objects.

Incorrect:

Not B: System.IO.FileStream exposes a Stream around a file, supporting both synchronous and asynchronous read and write operations.

QUESTION 4

Which standard allows data types to be interchanged among all Common Language Infrastructure (CLI) programming languages?

- A. Common Intermediate Language System (CILS)
- B. Virtual Execution System (VES)
- C. Common Type System (CTS)
- D. Microsoft Intermediate Language (MSIL)

Correct Answer: C

QUESTION 5

In which folder should you store the web.config file in a .NET web application?

- A. App_Data
- B. Bin
- C. App_Code
- D. Root

Correct Answer: D
