QUESTION 1

Which three characteristics define the identity of an assembly? (Each correct answer presents part of the solution. Choose three.)

A. File size

B. Simple text name

C. Version number

D. File creation date

E. Culture information

Correct Answer: BCE

*

The Assembly Class represents an assembly, which is a reusable, versionable (C), and self- describing building block of a common language runtime application.

*

Assembly Properties include_

/ FullName (B)

Gets the display name of the assembly.

*

(E) The AssemblyName.CultureInfo property gets or sets the culture supported by the assembly.

QUESTION 2

Which two classes in the .NET Framework can you use to open a file? (Each correct answer presents a complete solution. Choose two.)

A. System.IO.FileInfo

B. System.IO.File

C. System.IO.Path

D. System.IO.Stream

Correct Answer: AB

A: System.IO.FileInfo provides properties and instance methods for the creation, copying, deletion, moving, and opening of files, and aids in the creation of FileStream objects.

B: System.IO.File provides static methods for the creation, copying, deletion, moving, and opening of files, and aids in

the creation of FileStream objects.

Incorrect:

Not D: System.IO.FileStream exposes a Stream around a file, supporting both synchronous and asynchronous read and write operations.

QUESTION 3

You use code from different companies.

You need to avoid naming conflicts within your code.

What should you do?

A. Use global variables to reference each of the classes.

B. Define each class as private.

C. Deploy the classes as two separate files.

D. Define the classes inside unique namespaces.

Correct Answer: D

.NET development encourages unique namespaces.

QUESTION 4

You create a class that does not explicitly inherit from any base class. Which is the implied base type of the class?

A. Type

B. Void

C. Object

D. TypedReference

Correct Answer: C

QUESTION 5

You define a method according to the following code segment. (Line numbers are included for reference only.)

```
01    void DoWork()
02    {
03      try
04      {
05        //Method body
06      }
07      catch (Exception)
08      {
09      }
10      finally
11      {
12      }
13    }
```

Where should you insert code that must be executed, regardless of whether or not an error is thrown?

A. Between lines 05 and 06

B. Between lines 08 and 09

C. Between lines 11 and 12

D. Between lines 12 and 13

Correct Answer: C
