**QUESTION 1**

A large telecommunications company is leveraging the capability of AEM to integrate with SAML.

The architect must configure the SAML Authentication Handler. By default the SAML 2.0 Authentication handler is disabled.

Which two OSGi configuration properties must the architect set to enable the SAML 2.0 Authentication handler? (Choose two.)

- A. The public certificate of the identity provider
- B. The identity provider POST URL
- C. The Service Provide Entity ID
- D. The Service Ranking

Correct Answer: BC

QUESTION 2

A small public sector organization needs help planning the architectural design of its AEM system. The reorganization's few staff members resist learning new technologies.

What is the most important factor for the architect to consider while planning the system design?

- A. Performance
- B. Usability
- C. High Availability
- D. Extensibility
- E. Low Maintenance

Correct Answer: C

QUESTION 3

A digital publisher is migrating to AEM. The primary goal is to provide a more user-friendly page authoring interface. The current content management system has been built in house by staff developers, runs on top of a MySQL database, and uses forms for content editing. Discovery meetings are being held with the business owners and content authors. What is the most significant and relevant conceptual change from the current CMS?

- A. AEM uses a hierarchy-based repository.
- B. AEM does NOT use a relational database.
- C. AEM allows authors to drag-and-drop components to build pages.

D. AEM is written in Java.

Correct Answer: C

QUESTION 4

A large retail company has integrated AEM into its commerce stack. Logged in users can submit product ratings through the ratings" component. To ensure initial ratings do not skew results too far positive or negative, the company plans to show the tallied ratings only after a minimum number of submissions has occurred.

For which reason must the ratings component be extended to meet these requirements?

- A. Only the average rating is available via API
- B. The Tally/Rating Component API does not provide the number of user responses.
- C. The author must be able to provide the minimum number of votes for display.
- D. A custom rating service must be created to support this functionality.

Correct Answer: B

QUESTION 5

A company's entertainment website contains the following features:

A homepage with a consistent toolbar and listing of articles by category

A community page

Individual article pages containing a combination of text and images.

End users are able to create new forums, browse article by category, log in using a modal dialog box, and search from the toolbar.

How many AEM templates should the architect create?

- A. Ten
- B. Seven
- C. Five
- D. Three

Correct Answer: B
