-  **100% Money Back** Guarantee
-  **365 Days** Free Update
-  **800,000+** Satisfied Customers

**QUESTION 1**

Identify two features/issues that YARN is designated to address: (Choose two)

- A. Standardize on a single MapReduce API
- B. Single point of failure in the NameNode
- C. Reduce complexity of the MapReduce APIs
- D. Resource pressure on the JobTracker
- E. Ability to run framework other than MapReduce, such as MPI
- F. HDFS latency

Correct Answer: DE

QUESTION 2

You have installed a cluster HDFS and MapReduce version 2 (MRv2) on YARN. You have no `dfs.hosts` entry(ies) in your `hdfs-site.xml` configuration file. You configure a new worker node by setting `fs.default.name` in its configuration files to point to the NameNode on your cluster, and you start the DataNode daemon on that worker node. What do you have to do on the cluster to allow the worker node to join, and start storing HDFS blocks?

- A. Without creating a `dfs.hosts` file or making any entries, run the commands `hadoop.dfsadminrefreshModes` on the NameNode
- B. Restart the NameNode
- C. Creating a `dfs.hosts` file on the NameNode, add the worker Node's name to it, then issue the command `hadoop dfsadmin refresh Nodes =` on the Namenode
- D. Nothing; the worker node will automatically join the cluster when NameNode daemon is started

Correct Answer: A

QUESTION 3

You have A 20 node Hadoop cluster, with 18 slave nodes and 2 master nodes running HDFS High Availability (HA). You want to minimize the chance of data loss in your cluster. What should you do?

- A. Add another master node to increase the number of nodes running the JournalNode which increases the number of machines available to HA to create a quorum
- B. Set an HDFS replication factor that provides data redundancy, protecting against node failure
- C. Run a Secondary NameNode on a different master from the NameNode in order to provide automatic recovery from a NameNode failure.
- D. Run the ResourceManager on a different master from the NameNode in order to load-share HDFS metadata

processing

E. Configure the cluster's disk drives with an appropriate fault tolerant RAID level

Correct Answer: D

QUESTION 4

Your cluster is running MapReduce version 2 (MRv2) on YARN. Your ResourceManager is configured to use the FairScheduler. Now you want to configure your scheduler such that a new user on the cluster can submit jobs into their own queue application submission. Which configuration should you set?

A. You can specify new queue name when user submits a job and new queue can be created dynamically if the property `yarn.scheduler.fair.allow-undecleared-pools = true`

B. `Yarn.scheduler.fair.user.fair-as-default-queue = false` and `yarn.scheduler.fair.allow-undecleared-pools = true`

C. You can specify new queue name when user submits a job and new queue can be created dynamically if `yarn.scheduler.fair.user-as-default-queue = false`

D. You can specify new queue name per application in `allocations.xml` file and have new jobs automatically assigned to the application queue

Correct Answer: A

QUESTION 5

You are planning a Hadoop cluster and considering implementing 10 Gigabit Ethernet as the network fabric. Which workloads benefit the most from faster network fabric?

A. When your workload generates a large amount of output data, significantly larger than the amount of intermediate data

B. When your workload consumes a large amount of input data, relative to the entire capacity of HDFS

C. When your workload consists of processor-intensive tasks

D. When your workload generates a large amount of intermediate data, on the order of the input data itself

Correct Answer: A
