**QUESTION 1**

You are implementing a VHT-capable AP. Which one of the following channels is available in the 802.11ac amendment to the 802.11-2012 standard, which was not available in the standard before this amendment?

- A. 153
- B. 144
- C. 161
- D. 56
- E. 48

Correct Answer: B

---

**QUESTION 2**

ABC Company has thousands of Wi-Fi users accessing their network on a daily basis. Their WLAN consists of 700 access points, 6 WLAN controllers, and a wireless network management system.

What network functions are performed by the enterprise-class WNMS? (Choose 3)

- A. RF pre-deployment planning and post-deployment reporting of access point locations on a floor plan
- B. Performance and security monitoring of WLAN controllers with alarms and notifications for administrative staff
- C. Radio management, fast roaming, key caching, and other centralized control plane operations
- D. Centralized bridging of guest data traffic and application of firewall and QoS policies to data
- E. Management of WLAN controller configuration and provisioning of firmware updates
- F. Generating, encrypting, and decrypting 802.11 frames and collecting RF radio data.

Correct Answer: ABE

---

**QUESTION 3**

Two co-located 802.11b/g/n APs can interfere with one another and cause contention and collisions, even when the two APs are operating on non-overlapping channels (e.g. 1 and 6).

What deployment flaw could cause this problem?

- A. The access points are mounted too closely to one another.
- B. Reflective objects in the area are causing significant multipath.
- C. A client station is using active scanning to probe for access points on multiple channels.

D. The access points are not synchronized to the same NTP server.

Correct Answer: A

---

#### QUESTION 4

When performing a site survey for a Multiple Channel Architecture (MCA) system in a multi-tenant building with five floors, what aspect should you, as the site surveyor, keep in mind?

- A. The RF interference caused by passing airplanes supporting on-board Wi-Fi should be a prime consideration.
- B. The omni-directional antennas of the access points should be oriented parallel to the floor to maximize the coverage pattern across as many floors as possible.
- C. The channel reuse pattern should be three dimensional with the RF cell extending coverage of each access point to other floors.
- D. The Fresnel Zone is completely blocked between floors so each floor is considered a separate site survey.

Correct Answer: C

---

#### QUESTION 5

What statements accurately describe the RF cables and connectors that are used in an 802.11 WLAN system? (Choose 3)

- A. RF cables have upper and lower frequency range specifications.
- B. 75 and 125 ohms are the typical impedances of 802.11 WLAN connectors.
- C. Two RF connectors of the same type (e.g. SMA), manufactured by different companies, may vary in specifications.
- D. Every RF connector causes insertion loss.
- E. Large diameter RF cables cause greater loss than small diameter cables.

Correct Answer: ACD
