**QUESTION 1**

Given a database with Self-Tuning Memory Manager (STMM) enabled, what will DB2 do when a new buffer pool is created using the IMMEDIATE option?

- A. Attempt to create the buffer pool and immediately request additional memory from the operating system to allocate. If the operating system memory is not available, the buffer pool will not be created.
- B. Attempt to create the buffer pool and immediately allocate the memory requested, resizing the existing buffer pools and heaps as required. If there is insufficient memory in the global memory allocation for DB2, the buffer pool will not be created.
- C. Attempt to create the buffer pool and immediately allocate the memory requested from available database shared memory. If the memory available is not sufficient, then allocation of the buffer pool will be deferred until the database is stopped and restarted.
- D. Attempt to create the buffer pool and immediately request additional instance level memory. If the instance level memory is not available, then creation of the buffer pool is deferred until the database is stopped and restarted.

Correct Answer: C

QUESTION 2

If LOGSECOND=-1 then which of the following statements is true?

- A. You still use LOGPRIMARY and LOGFILSIZ configuration parameters to specify how many log files the database manager should keep in the active log path.
- B. You must configure the OVERFLOWLOGPATH configuration parameter if your active log path is not on a raw device.
- C. The database will reserve active log space for transactions that may need to roll back and write log records.
- D. An infinite number of overflow log files will be used with archival logging.

Correct Answer: A

QUESTION 3

Which database manager configuration parameter is used to set an instance-wide soft limit on the total amount of memory that can be consumed by private sorts, within that instance, at any given time?

- A. SORTHEAP
- B. SHEAPTHRES_SHR
- C. SHEAPTHRES
- D. SORTHEAP_SHR

Correct Answer: C

QUESTION 4

Which action can be performed by the ALTER TABLESPACE statement?

- A. Change an SMS table space to a DMS table space on any database partition.
- B. Change the size of a container in an SMS table space.
- C. Change the EXTENTSIZE setting for a table space on a database partition that currently has no containers.
- D. Add a container to an SMS table space on a database partition that currently has no containers.

Correct Answer: D

QUESTION 5

A DBA would like to examine repartitioning options for a partitioned database named PRODDB. Which tool can be used to provide recommendations on re-partitioning?

- A. Configuration Advisor
- B. Partition Assistant
- C. Design Advisor
- D. Workload Manager

Correct Answer: C
