**QUESTION 1**

What would be the result of issuing a reload command on one of the two switches peered together in an MLAG domain where both switches are running EOS version 4.14.1F?

- A. Dual-homed hosts lose 50% of network capacity through the MLAG domain while the switch reboots
- B. The peer switch also reboots to ensure network stability.
- C. The peer switch sends out gratuitous BPDUs to let the network know that it has assumed the root-bridge role.
- D. Nothing bad ever happens when MLAG is enabled!

Correct Answer: A

QUESTION 2

Which of the following are not valid boot-config file entries?

- A. NETGW=192.168.1.1
- B. IMAGE-flash:EOS-4.12.1.swi
- C. SWI=flash:EOS-4.12.1.swi
- D. SWIX=flash:EOS-4.12.1.swi

Correct Answer: B
