QUESTION 1

SIMULATION

Describe the proper technique for assessing circulation in infants and children.

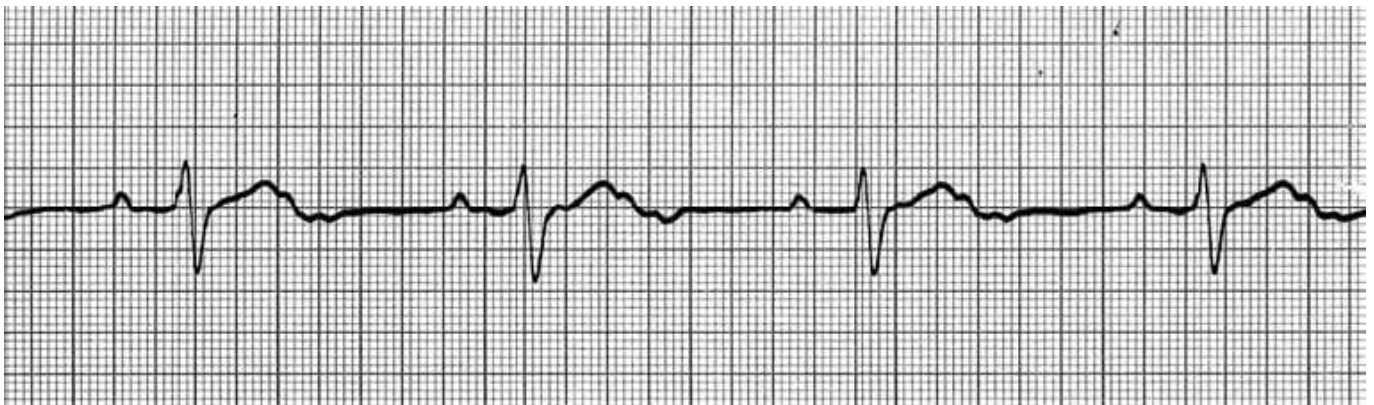

A. When assessing the circulatory status of a child, the following need to be examined: the brachial or femoral pulse, peripheral pulses, capillary refill, skin color, and temperature. Blood pressure should be assessed in children over the age of 3.

Correct Answer: A

QUESTION 2

SIMULATION

The patient "fainted." Exam reveals an alert patient. BP is 120/80 and respirations are 16/minute. The patient denies chest pain or injuries. The monitor shows the following rhythm. Treatment?

A. O₂, IV access, transcutaneous pacer on standby, monitor closely, and rapid transport to a facility for likely permanent pacemaker implantation. (The rhythm above is second-degree AV block, Mobitz type II.)

Correct Answer: A

QUESTION 3

FILL BLANK

Identify the condition in which a patient's heat loss exceeds the patient's heat gain.

A. Hypothermia

Correct Answer: A

QUESTION 4

SIMULATION

What is the purpose of the oxygen reservoir?

A. The oxygen reservoir allows for a higher concentration of oxygen.

Correct Answer: A

QUESTION 5

SIMULATION

What adjunctive airways may be necessary to effectively ventilate with the bag-valve-mask?

A. Oropharyngeal or nasopharyngeal airways.

Correct Answer: A
