Correct Answer:

Actions

Create a sync group

Run Server Registration

Answer Area

First action:

Second action:

Step 1: Create a Storage Sync Service

The deployment of Azure File Sync starts with placing a Storage Sync Service resource into a resource group of your selected subscription.

Step 2: Install the Azure File Sync agent

The Azure File Sync agent is a downloadable package that enables Windows Server to be synced with an Azure file share.

When the Azure File Sync agent installation is finished, the Server Registration UI automatically opens. You must have a Storage Sync Service before registering.

(Step 3: Run Server Registration

Registering your Windows Server with a Storage Sync Service establishes a trust relationship between your server (or cluster) and the Storage Sync Service. A server can only be registered to one Storage Sync Service and can sync with

other servers and Azure file shares associated with the same Storage Sync Service.)
